```
Atari Hardware / Software Auction

Please send bids to wesseago@juno.com
Please include your name, address, phone number,
item bidding on, and bid.

Bid increasements are as follows:
items less than $10 = $1
items $10 and over = $2

Auction will run through November 2.
All items will be going once on October 29,
going twice on October 31, and sold on November 2.

Hardware
--------------------------------------------------
Atari 800 XL with power supply----------kseiner@edu.uni-klu.ac.at $16
Atari 400 with power supply----------kseiner@edu.uni-klu.ac.at $16

Hi,

In article <6gbqCQrpzHB@peter.soemtron.sb.sub.de>, peter@soemtron.sb.sub.de says...

>Today I installed the new Atari OS-ROM "QMEG+OS 4.04" of Stefan Dorndorf
>in my XE. It's great to have a brandnew OS (1997) ticking in my 10 ten
>years old Atari....

I don't know well about this OS, can you let me know details of it?
I'm interested in it.

Thanx!

The XF551, like other Atari disk drives, uses a 9 volt ac, 31VA transformer.

: w/suggestions or parts, I'd be interested.
: -justin
: jc7664b@american.edu

Justin,

If your 800 IS in working condition, it should be as easy as falling off a log to display its output on any TV or most any composite NTSC monitor. The cable from the rear of the computer with the RCA plug should be able to send an RF signal to a TV on channel 2 or 3 (selectable with the switch on the right side of the console). You should have received a switchbox with your computer. If you have it, plug the computer into it and connect the spade lugs to your TV's 300 ohm terminals. If your TV only has a 75 ohm "F" connector, you'll need a 300 ohm to 75 ohm transformer such as Radio Shack 15-1253.

If you can't find the switchbox you'll have to connect the Atari to the TV with another connector box such as Radio Shack 15-1268 or adapter 278-255.

Connection to a monitor is a bit more envolved since cables may be available only through mail order. Try B&C ComputerVisions catalog # CAA005 composite color monitor generic cable. Their phone number is 408-986-9960.

If you're handy with a soldering iron and want to make your own monitor cable, use a five pin male DIN plug on the computer end (Radio Shack 274-003) and male RCA plugs (Radio Shack 274-339) on the monitor end. Most monitors use RCA connectors. Use shielded (coaxial) cable such as Radio Shack 278-512 or buy RCA cables like 42-2355 and cut off one end. The pinout for the Atari 800 video/audio cable is shown below. Some NTSC monitors use the composite connection and some use both the luminance and chromanance connections instead. Audio may be connected to monitors that have audio amplifiers built in.

Computer DIN plug pin	Monitor RCA plug
1	Luminance Inner Conductor
2	Luminance Shield Outer Conductor
3	Audio Inner Conductor
2	Audio Shield Outer Conductor

4 Composite Video Inner Conductor
2 Composite Shield Outer Conductor

5 Chroma Inner Conductor
2 Chroma Shield Outer Conductor

By the way...the 800 is the only Atari 8-bit computer that has the chroma output connected to pin 5. In the other models with monitor connectors, pin 5 is not connected.

Question, has anybody else in the world seen this game besides me. It came part and parcel with a bunch of disks I had given to me when a friend abandoned the Atari's. I only ever saw it run on 800 and that was 7 or 8 years ago, so memory is a kinda vaque.... I could never get the silly thing to run on my XE's so I shelved it and forgot about it. Just wondering.....

>Best way is to use an ICD Rambo upgrade. B&C and Best should have them.
>Atari Classics has a battery powered 512K upgrade that you could use in
>your 1200XL.
> Bob Woolley

And if someone wants to do it himself (herself)?
The sources mentioned above aren't practical for me.
I live too far away and the transport costs would be
higher the the cost of the upgrade itself.

Is there any mod description how to upgrade 1200XL
to at least 256K? Is 800XL 256kmod applicable?
If they are, I would like somone to help me locate
those connection points, since I do not have any
other docs or blueprints.

Best regards,
Mike

>>>>> "Anders" == Anders Skelander <Anders.Skelander@uab.ericsson.se> writes:

Anders> Does anybody know if the idea presented below should be
Anders> theoretically possible to implement?

Yes, it is possible, and it has been done. As I don't have a
soundcard nor MS-DOS myself, I don't remember the name of the MS-DOS
program that reads normal VIC-20 and C64 tapes (no Turbo Tape support
yet). That program is written in machine language, and the source
code is available.

Anders> Now if i had a program that analysed the sound file and
Anders> converted it to a byte stream (a file in memory) the same way
Anders> the old home computers did it while loading, I would consider
Anders> it being a convenient method for this task.
```

The conversion can be done in real time without any problems.
Remember, the average PC is hundreds to thousands of times faster than
a 6502 running approximately at 1 MHz.

Datasoft made a game called "Bruce Lee", maybe Super Bruce Lee was
a hacked version? Despite it's blocky graphics it was a pretty
good game (simultaneous 2 player as well).

Vidar,
If it is chocolate brown and silver, it is the Atari Touch Tablet.
As noted, it can be accessed via a sorta simple BASIC routine for X Y
data. You need to read the data from the joystick port registers. Let me
check this for sure. That might be (probably is) the paddle port
registers. Now that I think about it, I'm sure that's where you get the
data from. I'll look into it anyway and get back.

Never heard of "Super Bruce Lee" either, but the actual game was fun for what it was worth. I found it got repetitive (e.g. boring) after the third or fourth go around.

Around the time the game was released, "Electronic Games" magazine did a nice interview with the guys who wrote the game. The two player option (where the opponent could be the Green Yamo) was actually a brainstorm that came by mistake during the final stages. I forgot the exact details, but when they were working out the bugs or something, one of the programmers wanted to test something out by playing the Yamo character, and poof! -- a new addition was added to the game.

This auction is dedicated to the Old Lady. Without her a lot of this would have been impossible. Thank You

2919. Don't Fear's 3rd Auction Part 1 (update 2)

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-28 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <3456AAE2.196875DB@prodigy.com>
Source record: 69103
Cross-posted to:
rec.games.video.classic,rec.games.video.misc,rec.games.video.marketplace,rec.games.video.nintendo,comp.sys.atari.8bit

Don't Fear's Huge 3rd Auction Part 1 (update 2)

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds.
If you choose to send a personal check please allow 2-3 weeks for the
check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of
final bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to play can you spot the two classic
game collectors.
Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This part of the auction features:
Atari 2600 - 308 Items Atari 5200 - 31 Items

Don't Fear's Huge 3rd Auction Part 1 (update 2)

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check all in U.S. funds.
If you choose to send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of the item.
10. Email me if you are looking for a specific label varaition, I might have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may bid.
14. All orders over $100 will recieve as an added bonus my Freshman video project. You'll get a chance to play can you spot the two classic game collectors.
Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This part of the auction features:

But did you know that Arthur C. Clarke has actually told us what HAL's
first words were?

They were to the effect of:

"Good morning doctors. I am taking this opportunity to inform you that
I have just wiped Windows '95 from my hard drive."

And that's not a lie.

They need the standard 9 V AC power supplies handled with a lot of Atari Hardware.

Try those of your 800 (but be sure to have the big ones, somme 800 have only 1,5 A supplies, some 3 A, I tihnk you will need the 3 A ones)

2927. 1400XL Production Run Question

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-28 00:00:00 UTC
From: kheller2@ix.netcom.com
Message-ID: <633h05$l7d@dfw-ixnews4.ix.netcom.com>
Source record: 69111

I recently added a 1400XL Engineer prototype to my collection. I was under the impression that 1400XL's used a 1450XL motherboard. Well, the side cartridge piece on this 1400XL doesn't fit my 1450XL boards very well. The 1400XL board is cut differently from the 1450XL board.

To make things even stranger, the 1400XL motherboard is marked "1400XL". It is a almost completely hand soldered, and the modem is a perf/wirewrap board.

It is interesting to note how they went from the "1400XL" to the "1450XL" boards. However, for the record, did the production run of 1400XL's use 1450XL boards and what is the part number of the side plastic that is used on those same machines?

Ever heard of GEOS (PC version)?

2929. Sample and Analyse Tape SW

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-28 00:00:00 UTC
From: Anders Skelander <Anders.Skelander@uab.ericsson.se>
Message-ID: <3455D52B.7CE@uab.ericsson.se>
Source record: 69113
Cross-posted to: comp.sys.atari.8bit,comp.sys.cbm

I have plenty of tape software for the Atari 400/800/XL/XE
and the Commodore C64/128 computer series.

Does anybody know if the idea presented below should be
theoretically possible to implement?

I want to convert tape software to MS-DOS files, for
use in emulators available for IBM PC compatible computers.

If I sample the sound from the tape software with my
PC computer, I will get a sound file on the MS-DOS
computer's hard disk.

Now if i had a program that analysed the sound file
and converted it to a byte stream (a file in memory) the
same way the old home computers did it while loading, I would
consider it being a convenient method for this task.

The advantage with this method is that it could be
implemented without special hardware. The extra
effort has to be spent on developing the software
for the analysis/conversion task.

> ////Pakrat

Bill,
Is that really nice!? I use both and am glad I can. The 130XE,MI/O,
XF551, modem, hard drive, not to mention all the power supplies would be
a mess moving to<>from work. Hense I use PCXf3.60 at work AND on my home
PC (Pentium 133). This allows me to use programs at home and at work. I
can move file easily from one platform to the other.
I, for one, am glad there are emulators. Thanx to the emulator
programmers!!!

I like the emulators too. As far as the artifacting, I was wondering if one of those VGA to TV cards would put artifacting back into Conan and those other games that depended on it. It seems like as long as the TV had only the standard 160 color clocks where the 320 pixels go, artifacting should occur.

I went to a garage sale a few months ago and found what was one
of my holy grails of a videogame find: a Fairchild Channel F!
Complete with about 15 games! There is no was I'll sell it.
I also have a vectrex with about 4 games. Just wish I could
have the cellophane overlays for it...

Okay, you've got me curious... what the hell's a Fairchild Channel F? Details please... I just love to hear about old videogame stuff.

Is there a web-site around with pics. anywhere?

No idea what a vectrex is either... hmmmmm... should I feel naiive?

Nathan.

> should occur.

I'm by no means an expert on video, but as I recall the artefacting
present in the NTSC computers is a result of the nature of the
video signal generated by the hardware. i.e. I believe w/ a good
monitor its possible to tweak it till the artefacting disappears.

I've also heard PAL systems dont have artefacting like US systems do.

Since the video section of the VGA/TV card probably wouldnt share
the unique qualitys that made artefacting possible on the real thing, it
might not work.

Seems best to do it in software. Trivial code, but adding even a few extra
and/or branches to a part of the emulator that gets so heavily used
probably drags down the speed.

This odd since TextPro is made to work with MyDOS and SpartaDOS.
(you'll even be able to tell what DOS you're using when you goto the ^M menu)
Maybe you should try different versions of MyDOS.Many people aren't using the
real MyDOS any more but a hacked one.

I thought so too but remember that the Apple does it with ordinary 320x200
graphics (plus the high-bit palette thingy,and minus some of the screen).
And the Atari runs faster than the Apple.
Then again,maybe Ultima 2 looks really crappy on the Apple.
(though it weould be more colourful)

>Gilbertson himself and he didn't have any of it anymore :-(He was a nice
>guy though! Hope anybody can help. Take Atarian care everybody!

The software used was called the Advanced Music Processor, written by
Phillip Price. The tools used to create the songs were never
released to the public. If I remember what Phillip told me correctly,
Gary had used the Atari Macro Assembler to create the songs using a
set of macros. So there realy is no "editor" used to create Advanced
Music Processor files. I do have two discs of tunes that Gary sent
me. But I am hesitant on giving any of those songs out without Gary's
permission. There's also a couple of other Datasoft games (one for
sure) that used some of Gary's tunes.

If you are looking for a good music composer and player for the Atari
8-bit, check out the Antic Music Processor 2.0 (sorry, folks,
shameless plug, here) or Lee Actor's Advanced Music System. You
should find both it in the Atari archives.

Hope this helps
Steve

Well I've been playing for some time now. I'm not strong enough
to last very long in the towers at present (I can't reach any
dungeons) so I cannot validate the dungeon theory.
As for the thief approach, I thought this was where I would get
them from. I have killed countless thieves (and some boats too)
and not one has left me with the Blue Tassles.

I did think it was odd that amongst all the Ultima 2 hints I found,
no-one mentioned how difficult it was to obtain Blue Tassles. It
sounds like I have a bugged version... =(

Not only do I not have the Phantasie docs but now I can't even
play Ultima 2... *sheesh*

Hmmm,

I never spent any time in the Dungeons and got the Blue Tassles. I
didn't buy the original 1st cut version for the 8-bit, but I got Blue
Tassles, Brass Buttons, Boots, etc.. all from Thieves.

Later,
Steve

Hi everybody -

I'm trying to get some of the good old fun days back into my life. Just started my job here in the Southern Bay Area and would like to meet people for some a8 chat.

It's been too long since I've developed something in assembly language (and I'm sure I wouldn't have the time these days) but I think I could still help out with some tips. My specialty used to be the analysis of Polish copy protections, mainly to help out friends who are Happy/Speedy drive owners (don't even think about asking if you didn't BUY your copy).

Let me know via e-mail if you would like to talk over a beer (or two).

Happy 8bitting -
Kermit "FlyFrog" *mcs.

I'd suggest it didn't as a number of people I know work on the
system. Including the aforementioned Zefram (who is doing work on the
kernel).

You could do a webby search for it, only I seem to recall a rename was
performed after someone found that TAOS was already a
product. taos.co.uk might be a good start.

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 10/27/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 233 for various 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site,
including 12 for the Commodore Vic-20 computer!

I have the following printers available, for sale or trade. These
were acquired with various computer systems, and while they may work
with more than one type of computer system, I have included the
type of system that they were acquired with, where applicable.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

HARDWARE:

NOTE: The Lots listed below include only what is listed!

Accessories:
$ 6.00 Star SG-10/15 Dot Matrix Printer Users Manual

****

APPLE][COMPUTER:

LOT #1

APPLE IMAGEWRITER II PRINTER with power cord.

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

I believe Ernest and Bo Schreurs of The Netherlands have already done this
and they've made at least one part of the software available at UMICH.
Also, I believe the latest versions of A. P. E. incorporate software to
decode files made by sampling the tapes and make them available to
emulators.

re: hooking up an A8 to a VGA monitor via an external TV box.
How sharp is the image? is it better than one can get with
Chroma/luma output? (as I have with my 1CM135 Magnavox).
Also, is the Magnavox 8CM515 a 15" monitor? How is its output?
Something else, I was windering if it would be worth it to
start saving for a Faroudja line doubler. At about $1200, it
AIN'T CHEAP!!!

////Pakrat

P.S. My Amiga 1080 monitor was a little bit sharper than my
Magnavox, but it started doing bizarre things, and I got rid
of it. I had bought it refurbished. Sure shows me!

Master Peregrin, you certainly have a large tagline! What sort of thouroughput do you actually get with a T1 going thru a PC to your XEGS? Or does the Net just hardly slow down much? I use a Motorola 28.8 with an MIO 256K (yes the modem is going at 28.8!), while the MIO is at 19.2 using ICE-T with Len Spencer's highly useful HyperSpeed Handler. My problem is that when the Net slows down, I can't do anything about it.

////Pakrat

P.S. Synchronicity? I'm reading 'The Return of The King' after putting it off for about 10 years.

This title was never released for the 8-bit as the program was one of Infocom's later efforts that employed built-in clues and full color graphics -- far more stuff than the Ataris could handle.

I believe the title is available somewhere for the PC on one of those re-packaged Infocom CD-ROMs somewhere, however.

On each screen, there is the train with its cars and places to visit. For example, you might have oil wells to visit and oil cars. Line up an oil car with the oil well and press the joystick button. The car fills up with oil. Take the oil to the refinery, press the joystick button to unload the oil. In the same way, move logs to the mill, etc., etc. You make money to operate the train this way. Use the money to add fuel to your train. After a while, a track appears that allows you take your train to the next screen. Fun game.

DE RE ATARI

PREFACE

This manual is about the ATARI Home Computer. It covers both the ATARI 400TM and the ATARI 800TM Computers. These two computers are electrically identical, differing only in mechanical features such as the keyboards and cartridge slots. The purpose of this manual is to explain in detail how to use all the features of the ATARI Computer. Because this is a complex and powerful machine, the explanations are accordingly rather long. Furthermore, they demand some expert Expertise on the part of the reader. This book is not intended for the beginning programmer. The reader should be thoroughly familiar with the BASIC Reference Manual, which is provided with the computer. Familiarity with assembly language is also essential. A glossary in the back defines and explains some of the less commonly encountered jargon. However, this glossary does not include terms that every serious personal computer programmer should already know.

Written as a training manual for professional programmers who use the ATARI Home Computer, this book may be modified for general use at some later date. It does not supplant the technical reference manual (ATARI part number C016555), which is a reference for programmers who already understand the system. This book is intended to be a tutorial that explains ideas and possibilities rather than defining registers and control codes.

The title, DE RE ATARI, is pronounced "Day Ray A tari". It is an obscure -J literary reference. Some Latin manuscripts in Roman and medieval times were entitiled "De Re This" or "De Re That". Thus, "De Re Rustica" was a poem on farm ing and "De Re Metalllica" described metallurgy. Loosely translated, "De Re" means "All About".

Most of the word processing for the book was carried out with Atari computers. A source file editor was used for text editing, and a modified version of FORMS (available from the A tari Program Exchange) was used to format and print the text. A letter-quality printer was used for output. Some sect tons were developed with a conventional word processor.

The Software Development Support Group wrote this book. Chris Crawford wrote Sections 1 through 6 and Appendices A and B. Lane Winneer wrote Section 10 and AppendTx D with ass i stance from Jim Cox. Amy Chen wrote Appendix C. Jim Dunion wrote Sections 8 and 9. Kathleen Pitta wrote Appendix E. Bob Fraser wrote Section 7. Gus Makreas prepared the Glossary. The final result has many flaws, but we
are proud of it.

SYSTEM OVERVIEW

The ATARI Home Computer is a second-generation personal computer. First and foremost, it is a consumer computer. The thrust of the design is to make the consumer comfortable with the computer. This consumer orientation men ifests itself in many ways. First, the machine is proofed against consumer mistakes stakes by such things as
polarized connectors that will not go in the wrong way, a power interlock on the lid to the internal electronics, and a pair of plastic shields protecting the SYSTEM RESET key. Second, the machine has a great deal of graphics power; people respond to pictures much more readily than to text. Third, the machine has strong sound capabilities. Again, people respond to direct sensory input better than to indirect textual messages. Finally, the computer has joysticks and paddles for more direct tactile input than is possible with keyboards. The point here is not that the computer has lots of features but rather that the features are all part of a eons istent design philosophy aimed directly at the consumer. The designer who does not appreciate this fundamental fact will find himself working against the grain of the system.

The internal layout of the ATARI 400/800Tm Computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, CTIA, and POKEY. These chips were
designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate
on computations. While they were at it, they designed a great deal of
power into these chips. Each of these chips is almost as big (in terms
of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Master ing the ATARI 400/800 Computers is
primarliy a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display.

true microprocessor; it has an instruction set, a program (called the

display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to CTIA.

CTIA is a television interfaced chip. ANTIC directly controls most of CTIA's operations, but the 6502 can be programmed to intercede
and control some or all of CTIA's functions. CTIA converts the digital
commands from ANTIC (or the 6502) into the signal that goes to the television. CTIA also adds some factors of its own, such as color values, player-missile graphics, and collision detection.

POKEY is a digital input/output (1/0) chip. It handles such disparate tasks as the serial 1/0 bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the
1-1

SYSTEM OVERVIEW

chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses.

As with all 6502 systems, the I/O is memory-mapped. Figure 1-1 presents the coarse memory map for the computer. Figure 1-2 shows the
hardware arrangement.

<A SCANNED IMAGE WILL NEED TO GO HERE>
1-2

<A SCANNED IMAGE WILL NEED TO GO HERE>
1-3

ANTIC AND THE DISPLAY LIST

TELEVISION DISPLAYS

To understand the graphics capabilities of the ATARI Home Computer, one must
first understand the rudiments of how a television set works. Television sets use what is
called a raster scan display system. An electron beam is generated at the rear of the

television tube and shot toward the television screen. Along the way, it passes between sets of horizontal and vertical coils whihc, if energized, can deflect the beam. In this way the beam can be made to strike any point on the screen. The electronics inside the television set cause the beam to sweep across the television screen in a regular fashion. The beam's intensity can also be controlled. If you make the beam more intense, the spot in the screen that it strikes will glow brightly; if you make it less intense, the spot will glow dimly or not at all

The beam starts at the top-left corner of the screen and traces horizontally across the screen. As it sweeps across the screen, its changes in intensity paint an image on the screen. When it reaches the right edge of the screen, it is turned off and brought back to the left side of the screen. At the same time it is moved down just a notch. It then turns back on and sweeps across the screen agate. This process is repeated for a total of 262 sweeps across the screen. (There are actually 525 sweeps across the screen in an alternating system known as "interlace." We will ignore interlace and act as if the television has only 262 lines.) These 262 lines fill the screen from top to bottom. At the bottom of the screen (after the 262nd line is drawn), the electron beam is turned off and returned to the upper left corner of the screen. Then it starts the cycle all over agate. This entire cycle happens 60 times every second.

Now for some Jargon: a single trace of the beam across the screen is called a "horizontal scan line." A horizontal scan line is the fundamental unit of measurement of vertical distance on the screen. You state the height of an image by specifying the number of horizontal scan lines it spans. The per iod during which the beam returns from the right edge to the left edge is called the "horizontal blank." The per iod during which the beam returns to the top of the screen is called the "vertical blank." The entire process of drawing a screen takes 16,684 microseconds. The vertical blank per iod is about 1400 microseconds. The horizontal blank takes 14 microseconds. A single

horizontal line takes
64 micro seconds.

Most television sets are designed with "overscan"; that means they spread the
image out so the picture edges are off the edge of the television tube. This guarantees that
you have no unsightly borders in your television picture. It is very bad for computers, though,
because screen information that is off the edge of the picture does you no good. For tints
reason the picture that the computer puts out must be somewhat smaller than the television
can theoretically display. Therefore, only 192 horizontal scan lines are normally used by the
ATARI display. Thus, the normal limit of resolution of a television set used with this
computer is 192 pixels vertically.

2-1

ANTIC AND THE DISPLAY LIST
The standard unit of horizontal distance is the "color clock." You specify the width of an image by stating how many color clocks wide it Is. There are 228 color clocks in a single horizontal scan line, of which a maximum of 176 are actually visible. Thus, the ultimate limit for full-color horizontal resolution with a standard color television is 176 pixels. It is possible with the ATARI Home Computer System to go even finer and control individual half-clocks. This gives a horizontal resolution ton of 352 pixels. However, use of
tints feature will produce tnteresitng color effects known as color arti facts. Color artifacts can be a nuisance if they are not desired; they can be a boon to the programmer who desires additional color and is not fazed by their restrtcitons.

COMPUTERS AND
TELEVISIONS

The fundamental problem any microcomputer has In using a raster scan television for display purposes is that the television display is a dynamic process; because of this, the television does not remember the image. Consequently, the computer must remember the screen Image and constantly send a signal to the television telling it what to display. This process of sending in format ton to the television is a continuous process and it requires full-time attention For tints reason most microcomputers have special hardware circuits that handle the television The baste arrangement is the same
on virtually all systems:

coprocessor-->screen RAM--->video hardware--->TV
screen

The microprocessor writes information to the screen RAM area that holds the screen data. The video hardware is constantly dipping into tints RAM area, gettting screen data that it converts into television
signals These signals go to the television which then displays the in
format i on. The screen memory is mapped onto the screen in the same order that it follows in RAM. That is, the first byte in the screen memory maps to the top-left corner of the screen, the second byte maps one position to the right, then the third, the fourth, and so on
to the last byte which is mapped to the lower right corner of the screen.

The quality of the Image that gets to the screen depends on two factors: the quality of the video hardware, and the quantity of screen
RAM used for the display The simplest arrangement is that used by TRS-
80 and PET. (TRS-80) is a trademark of Radio Shack Co; PET is a trademark of Commodore Bus iness Mach ines.) Both of these machines allocate a specific 1K of RAM as screen memory. The video hardware circuits imply pull data out of tints area, Interpret it as characters
(using a character set in ROM), and put the resulting characters onto
the screen. Each byte represents one character, allowing a choice of 256 different characters in the character set. With 1K of screen RAM,
one thousand characters can be displayed on the screen. There isn much
that can be done with tints arrangement. The Apple uses more advanced
video hardware. (Apple is a trademark of Apple Computers.) Three graphics modes are provided: text, lo-resolutton graphics, and hi-resolution graphics. The text graphics mode operates in much the same
way that the PET and TRS-80 displays operate. In the low-resolution graphics mode, the video

hardware reaches into screen memory and interprets it differently. Instead of interpreting each byte as a character, each byte is interpreted as a pair of color nybbles. The value of each nybble specifies the color of a single pixel. In the high-resolution graphics mode each bit in screen memory is mapped to a single pixel.

If the bit is on, the pixel gets color in It; if the bit is off, the pixel stays dark.

e , The situation is complicated by a variety of design nuances in the Apple, but that Is the basic Idea. The important idea is that the
Apple has three display modes; three completely different ways of interpreting the data in screen memory. The Apple video hardware is smart enough to Interpret a screen memory byte as either an 8-bit character (text mode), two 4-bit color nybbles (lo-resolution mode), or 7 individual bits for a bit map hi-resolution mode).

ANTIC, A VIDEO
MICROPROCESSOR

The ATARI 400/&00 display 11st system represents a generalization of these systems. Where PET and TRS-80 have one mode and Apple has three modes, the ATARI 400/800 has 14 modes. The second
important difference Is that display modes can be mixed on the screen. That is, the user is not restricted to a choice between a screen ful of text or a screenful of graphics. Any collection of the 14 graphics. modes can be displayed on the screen. The third important difference is that the screen RAM can be located anywhere in the address space of the computer and moved around while the

program is running, while the other machines use fixed-screen RAM areas.

All of this generality is made possible by a video microprocessor called ANTIC. Where the earlier systems used rather simple video circuitry, Atari designed a full-scale microprossor just
to handle the intricacies of the television display. ANTIC is a true microprocessor; ir has an instruction set, a program, and data. The program for ANTIC is called the display list. The display list specifies three things: where the screen data may be found, what display modes to use to Interpret the screen data, and what special display options (if any) should be implemented. When (using the display list, it is important to shed the old view of a screen as a homogeneous image in a single mode and see it instead as a stack of "mode Iines." A mode line is a collection of horizontal scan lines. It streches horizontally all the way . A Graphtcs 2 mode line is 16 horizontal scan Itnes high, while a Graphtcs 7 mode line is only two scan lines high. Many graphics. modes available from BASIC are homogeneous; an entire screen of a single mode is set up. Do not limit your imagination to this pattern; with the display list you can
create any sequence of mode Itnes down the screen. The display list is a collection of code bytes that specify that sequence.

ANTIC'S instruction set is rather simple. There are four classes
of instructions: map mode, character mode, blank line and jump. Map
mode instructions cause ANTIC to display a mode line with simple
colored pixels (no characters). Character mode instructions cause
ANTIC to display a mode line with characters in it. Blank line
instructions cause ANTIC to display a number of horizontal scan
lines
with solid background color. Jump instructions are analogous to a
6502 JMP instruction; they reload ANTIC's program counter.
2-3

ANTIC AND THE DISPLAY
LIST

There are also four special options that can sometimes be
specified by setting a designated bit in the ANTIC instruction.
These
options are: display list Interrupt (DLI), load memory scan (LMS),
vertical scroll, and horizontal scroll.

Map mode instrtuctions cause ANTIC to display a mode line
containing pixels with solid color in them. The color displayed
comes
from a color register. The choice of color register is specified by
the value of the screen data. In four-color map modes (BASIC modes
3,
5, and 7, and ANTIC modes 8, A, D, and E), a pair of bits is requi
red to specify a color:

Value of Bit Color Register Used
pair

00 0 COLBAK
01 1 COLPFO
10 2 COLPF1
11 3 COLPF2

Since only two bits are needed to specify one pixel, 4 pixels are
encoded in each screen data byte. For example, a byte of screen data
containing the value $1B would display 4 pixels; the first would be
the background, the second would be color resgister 0, the thrird
would be color register 1, and the fourth would be color register 2:

$1B = 00011011 = 00 01 10 11

In two-color map modes (BASIC modes 4, 6, and 8, and ANTIC modes 9,
B.
C, and F) each bit specifies one of two color registers. A bit value
of 0 selects background color for the pixel and a bit value of 1
selects color register 0 for the pixel. Eight pixels can be stored
in
one screen data byte.

There are Eight different map display modes. They differ in the number of colors they display (2 vs 4), the vertical size one mode line occupies (1 scan line 2, 4, or 8), and the number of pixels that
fit horizontally into one mode line (40, 80, 160, or 320). Thus, some map
modes give better resolution; these will of course require more screen RAM. Figure 2-1 presents tints in format ton for all modes.

ANTIC BASIC No. Scan Lines/ Pixels/ Bytes/ Bytes/

Mode Mode Colors Mode Line Mode Line Line Screen

F 8 2 1 320 40 7680

Figure 2-1 ANTIC Mode Line Requirements

Character mode instructions cause ANTIC to display a mode line with characters in it. Each byte in screen RAM specifies one character. There are six character display modes. Character displays are discussed in Section

Blank line instructions produce blank lines with solid background color. There are eight blank line instructions they specify skipping one through eight blank lines

There are two jump tnstrucitons. The first (JMP) is a direct jump; it. reloads ANTIC's program counter with a new address that follows the JMP instruction as an operand. Its only function is to provide a solution to a tricky problem: ANTIC's program counter has only 10 bits of counter and six bits of latch and so the display list cannot cross a 1K boundary. If the display list must cross a 1K boundary then it must use a JMP instruction to hop over the boundary. Note that tints means that display lists are not fully relocatable.

The second jump instruction (JVB) is more commonly used. It reloads the program counter with the value In the operand and watts for the television to perform a vertical blank. This instruction is normally used to terminate a display list by jump ing back up to the top of the display list Jumping up to the top of the display list turns it into an infinite loop; waiting for vertical blank ensures that the infinite loop is synchronized to the display cycle of the television. Both JMP and JVB are 3-byte instructions the first byte is the opcode, the second and third bytes are the address to jump to (low then high).

The four special opt tons ment toned previously will be discussed in

2-5

ANTIC AND THE DISPLAY LIST

Sections 5 and 6. The load memory scan (LMS) option must have a preliminary explanation. This option is selected by setting bit 6 of a map mode or a character mode instruction byte. When ANTIC encounters such an instruction, it will load its memory scan counter with the following 2 bytes. This memory scan counter tells ANTIC where the screen RAM is. It will begin fetching display data from this area. The LMS instruction is a 3-byte instruction: 1 byte opcode
followed by 2 bytes of operand. In simple display lists the LMS instruction Is used only once, at the beginning of the display list. It may sometimes be necessary to use a second LMS instruction. The need arises when the screen RAM area crosses a 4K boundary. The memory scan counter has only 12 bits of counter and 4 bits of latch; thus, the display data cannot cross a 4K boundary. In this case an LMS instruction must be used to jump the memory scan counter over the
boundary. Note that this means that display data is not fully relocatable. LMS instructions have wider uses which will be discussed
later.

BUILDING DISPLAY LISTS

Every display 11st should start off with three "blank 8 lines" instructions. This is to defeat vertical overscan by bringing the beginning of the display 24 scan lines down. After this is done, the first display line should be specified. Simultaneously, the LMS should be used to tell ANTIC where it will find the screen RAM. Then follows the display list proper, which lists the display bytes for the mode lines on the screen. The total number of horizontal scan lines produced by the display list should always be 192 or less; ANTIC does not maintain the screen timing requirements of the

television. If you give ANTIC too many scan lines to display it will
do so, but the television screen will probably roll. Displaying
fewer
than 192 scan lines will cause no problems; indeed, it will decrease
6502 execution time by reducing the number of cycles stolen by
ANTIC.
The programmer must calculate the sum of the horizontal scan lines
produced by the display list and verify it. The display list
terminates with a JVB instruction. Here is a typical display list
for
a standard BASIC Graphics mode 0 display (all values are in
hexadecimal):

3
GRAPHICS INDIRECTION

(COLOR REGISTERS AND
CHARACTER SETS)

Indirection is a powerful concept in programming. In 6502 assembly language, there are three levels of indirection in referring to numbers. The first and most direct level is the immedi ate addressing mode In which the number itself is directly stated:

```
LDA #$F4
```

The second level of indirection is reached when the program refers to a memory location that holds the number:

```
LDA $0602
```

The third and highest level of indirection with the 6502 is attained when the program refers to a pair of memory locations which together contain the address of the memory location that holds the number. In the 6502, this indirection is complicated by the addition of an index:

```
LDA ($D0),Y
```

Indirection provides a greater degree of generality (and hence power) to the programmer. Instead of trucking out the same old numbers every time you want to get something done, you can simply point to them. By changing the pointer, you can change the behavior of the program. Indirection is obviously an important capability.

COLOR
REGISTERS

Graphics Indirection is built into the ATARI Home Computer in two ways: with color registers and with character sets. Programmers first approaching this computer after programming other systems often think in terms of direct colors. A color register is a more complex beast than a color. A color specifies a permanent value. A color register is indirect; it holds any color value. The difference between the two is analogous to the difference between a box-end wrench and a socket wrench. The box-end wrench comes in one size only but a socket wrench can hold almost any size socket. A socket wrench is more flexible but takes a little more skill to use properly. Similarly, a color register is more flexible than a color but takes more skill to use effectively.

There are nine color registers in the ATARI 400/800 Computer; four are for player-missile graphics and will be discussed in Section 4. The remaining five are not always used; depending on the graphics mode used, as few as two registers or as many as five

will show up on the screen. In BASIC mode 0, only two and one-half registers are used because the hue value of the characters is ignored; characters take the same hue as playfTeld register 2 but take their luminance from register 1. The color registers are in CTIA
at addresses $D016 through $D01A. They are "shadowed" from OS RAM locations into CTIA during vertical blank. Figure 3-1 gives color register shadow and hardware addresses.

Image Hardware OS Shadow

Playfield 2 COLPF2 D018 COLOR2 2C6
Playfield 3 COLPF3 D019 COLOR3 2C7
Background COLBK DOlA COLOR4 2C8

Figure 3-1 Color Register Labels and Addresses

For most purposes, the user controls the color regTsters by writing to the shadow locations. There are only two cases in which the programmer would write directly to the CTIA
addresses. The first and most common is the dTsplay list interrupt which will be discussed in
Section 5. The second arises when the user disables the OS vertical blank interrupt routines
that move the shadow values Into CTIA. Vertical blank interrupts are discussed in Sectlon 8.

Colors are encoded in a color register by a simple formula. The upper nybble gives the hue value, which is identical to the second parameter of the BASIC SETCOLOR command. Table 9-3 of the BASIC Reference Manual lists hue values. The lower nybble in the color register gives the I UM inance value of the color. It is the same as the thTrd parameter in the
BASIC SETCOLOR command. The lowest order bit of this nybble is not significant. Thus, there are eTght luminances for each hue. There are a total of 128 colors from which to choose (8 luminances times 16 hues). In this book, the term 'color' denotes a hue-luminance combination.

Once a color is encoded into a color register, it is mapped onto the screen by referring to the color regTster that holds Tt. In map dTsplay modes which support four color registers the
screen data specifies which color register Is to be mapped onto the screen. Since there are four color registers it takes only two bits to encode one pixel. Thus, each screen data

byte holds
data for four pixels. The value in each pair of bits specifies which color register provides the
color for that pixel.

In text display modes (BASIC's GRAPHICS modes 1 and 2) the selection of color registers is made by the top two bits of the character code. This leaves only six bits for defining
the character, which is why these two modes have only 64 character available.

Color register indirection gives you four special capabilities. First, you can choose from 128 different colors for your dTsplays. This allows you to choose the color that most nearly
meets your needs.

Second, you can manipulate the color registers in real time to produce pretty effects. The simplest version of this Is demonstrated by the following BASIC line:

```
FOR l=0 TO 254 STEP 2:POKEb712,1:NEXTI
```

This line simply cycles the border color through all possible colors. The effect is quite pleasing and certainly grabs atteti on. The fundamental technique can be extended in a variety of ways. A special variation of tints is to create simple cyclic animation by draw ing a figure in four colors and then cycl the colors through the color registers rather than redrawing the figure. The following program Illustrates the idea:

```
10 GRAPHICS 23
20 FOR X=0 TO 39
30 FOR l=0 TO 3
40 COLOR I
50 PLOT 4*X+I,O
60 DRAWTO 4*X+1,95
70 NEXT I
80 NEXT X
90 A=PEEK(712)
100 POKE
712,PEEK(710)
110 POKE
710,PEEK(709)
120 POKE
709,PEEK(708)
130 POKE 708,A
140 GOTO 90
```

The third application of color registers is to logically key colors to situations. For example, a paged menu system can be made more understandable by chagning the background color or the border

color for each page in the menu. Perhaps the screen could flash red when an illegal key is pressed. The use of the color characters available in BASIC Graphics modes 1 and 2 can greatly extend the impact of textual material. An account sum could be shown in red if the account is in the red, or black if the account is in the black. Important words or phrases can be shown in special colors to make them stand out. The use of colors in map modes (no text) can also improve the utility of such graphics. A single graph ics image (a monster, a boat, or whatever) could be presented in several different colors to represent several different versions of the same thing. It costs a great deal of RAM to store an image, but it costs very little to change the color of an existing image. For example, it would be much easier to show three different boats by presenting one boat shape in three different colors than three different boat shapes.

The fourth and most important application of color registers Is used with display 11st Interrupts. A single color register can be used to put up to 128 colors onto a single screen. This very Important capability will be discussed in Sect ton 5.

3-3

GRAPHICS INDIRECTION

CHARACTER SETS

Graphics indirection is also provided through the use of redefinable character set. A standard character set is provided in ROM, but there is no reason why tints particular character set must be used. The user can create and display any character set desired. There are three steps necessary to use a redefined character set. First, the programmer must cleft ne the character set. This is the most time-consuming step. Each character is displayed on the screen on an 8x8 grid; it is encoded in memory as an 8-byte table. Figure 3-2 depicts the encoding arrangement.

Character Image Binary Representation HexRepresentation

00000000 00
There is a bitmapped 00011000 18
A here. 00111100 3C
01100110 66
01100110 66
01111110 7E
01100110 66
00000000 00

Figure 3-2 Character Encoding

A full character set has 128 characters in it, each with a normal and an inverse video incarnation. Such a character set needs 1024 bytes of space and must start on a 1K boundary. Character sets for BASIC modes 1 and 2 have only 64 distinct characters, and so

require only 512 bytes and must start on a 1/2K boundary. The first 8 bytes define the zeroth character, the next 8 bytes define the first character, and so on. Obviously, defining a new character set is a big job. Fortunately, there are software packages on the market to make tints job easier.

Once the character set is cleft ned and placed into RAM, you must tell ANTIC where it can find the character set. This is done by poking the page number of the beginning of the character table into location $D409 (decimal 54281). The OS shadow location, which is the location you would normally use, is called CHBAS and resides at $2F4 (decimal 756). The third step in using character sets is to print the character you want onto the screen. This can be done directly from BASIC with simple PRINT statements or by writing numbers directly into the screen memory.

A special capability of the system not supported in BASIC is the four-color character set option. BASIC Graphics modes 1 and 2 support five colors, but each character in these modes is really a two-color character; each one has a foreground color and a background color. The foreground color can be any of four single colors, but only one color at a time can be shown within a single character. This can be a serious hindrance when using
3-4

GRAPHICS
INDIRECTION

character graphics.

There are two other text modes desinged especially for character graphics. They are ANTIC modes 4 and 5. Each character in these modes is only four pixels wide, but each pixel can have four colors (counting background) The characters are defined just like BASIC Graphics mode 0 characters, except that each pixel is twice as wide and has two bits assigned to it to specify the color register used. Unlike ANTIC modes 6 and 7 (BASIC modes 1 and 2), color register selection is not made by the character name byte but instead by the defined character set. Each byte in the character table is broken into four bit pairs, each of which selects the color for a pixel. (Tints is why there are only four horizontal pixels per character.) The highest bit (D7) of the character name byte modifies the color register used. Color register selection is made according to Figure 3-3:

bit pair in D7 = 0 D7 = 1
character defn
00 COLBAK COLBAK
01 PFO PFO
10 PF1 PF1
11 PF2 PF3

Figure 3-3 Color Register Selection for
Characters

Using these text modes, multicolored graphics characters can be put onto the screen.

Another interesting ANTIC character mode is the lowercase descenders mode (ANTIC mode 3). This mode displays 10 scan lines per mode line, but since characters use only eight bytes vertically, the lower two scan lines are normally left empty. If a character in the last quarter of the character set is displayed, the top two scan lines of the character will be left empty; the data that should have been displayed there will instead be shown on the bottom two lines. This allows the user to create lowercase characters with descenders.

APPLICATIONS OF CHARACTER
SETS

Many interesting and useful application possibilities spring from character set Indirection. The obvious application Is the modified font. A different font can give a program a unique appearance. It is possible to have Greek, Cyrillic, or other special character sets. Going one step further, you can create graphics fonts. The ENERGY CZAR(TM) computer program uses a redefined character set for bar graphs. A character occupies eight pixels; tints means that bar charts implemented with standard characters have a resolut of eight pixels, a rather poor resolution. ENERGY CZAR uses a

special character set in which some of the less popular text symbols (ampersands, pound signs, and the like) have been replaced with special bar chart characters. One character Is a one-pixel bar, another is a two-pixel bar, and so on to the full eight-pixel bar. The program can thus draw detailed bar charts with resolut ton of a single pixel. Figure 3-4 shows a typical display from this program. The mix of text with map graphics is only apparent; the entire display Is constructed with characters.
There is a computer screen picture here.
Figure 3-4 Energy CZAR Bar Charts

In many applications, character sets can be created that show special images. For example, by defining a terrain graphics character set with river characters, forest characters, mountain characters, and so forth, It is possible to make a terrain map of any country. Indeed, with imagination a map of terrain on a different planet can be done just as easily. When doing tints, It is best to define five to eight characters for each terrain type. Each variation of a single type should be positioned slightly differently in the character pixel. By mixing the different characters together, It is possible to

avoid the monotonous look that Is charactertsitc of primitive character graphics. Most people won't realize that the resulting map uses character graphics until they study the map closely. Figure 3-5 shows a display of a terrain map created with character set graphics. The reproduction in black and white does not do justice to the original display, which has up to 18 colors.

There is another computer screen here. Just some trees and mountains....

You could create an electron ics character set with transistor characters, diode characters, wire characters, and so forth to produce an electron ics schematics program. Or you could create an architectural character set with doorway characters, wall characters, corner characters, and so on to make an architectural blueprint program. The graphics posstbtitftes opened up by character graphics with personal computers have not been fully explored.

Characters can be turned upside down by pokeing a 4 Into iocat Ton 755. One possible appitcatton of tints feature might be for displaying playing cards (as in a Blackjack game). The upper half of the card can be shown right side up; with a display list interrupt the characters can be turned upside down for the lower half of the card. This feature might also be of some use in displaying images with mirror reflections (reflection pools, lakes, etc

Even more exciting possibilities spring to mind when you realize that It is quite practical to change character sets while the program is running. A character set costs either 512 bytes or 1024 bytes; in either case It is quite inexpensive to keep multiple character sets in memory and flip between them during program execution. There are three time regimes for such character set multiplexing: human slow (more than 1 second); human fast (1/60 second to 1 second); and machine fast (faster than 1/60 sec).

Human-slow character set multiplexing is useful for "change of scenery" work. For example, a space travel program might use one graphics character set for one planet, another set for space, and a third set for another planet. As the traveler changes locations, the program changes the character set to give exotic new scenery. An adventure program might change character sets as the player changes locales.

Human-fast character set multiplexing is primarily of value for animation. This can be done in two ways: changing characters

within a single character set, and changing whole character sets. The SPACE INVADERS (trademark of Taito America Corp.) program on the ATARI Home Computer uses the former technique. The invaders are actually characters. By rapidly changing the characters, the programmer was able to animate them. This was easy because there are only six different monsters; each has four different Incarnations.

High-speed cyclic animation of an entire screen is possible by setting up a number of character sets, draw ing the screen image, and then simply cycling through the character sets. If each character has a slightly different incarnation in each of the character sets, that character will go through an ani meted sequence as the character sets are changed. In this way a screen full of objects could be made to cycitcly move with a very simple loop. Once the character set data is in place and the screen has been drawn, the code to ant mete the screen would be tints simple:

```
1000 FOR 1=1 TO 10
1010 POKE
756,CHARBASE(I)
1020 NEXT I
1030 GOTO 1000
```

Computer-fast character set animation Is used to put multiple character sets onto a single screen. This makes use of the display ITst interrupt capability of the computer. Display list interrupts are discussed in Sect ton 5.

The use of character sets for graphics and animation has many advantages and some limitations. The biggest advantage is that it costs very litttle RAM to produce detailed displays. A graphics display using BASIC mode 2 characters (such as the one shown in Figure 3-5) can give as much detail and one more color than a BASIC mode 7 display. Yet the character Image will cost 200 bytes while the map image will cost 4000 bytes. The RAM cost for multiple character sets is only 512 bytes per set, so It Is inexpensive to have multiple character sets. Screen manipulations with character graph Tcs are much faster because you have less data to manipulate. However, character graphics are not as flexible as map graphics. You cannot put anything you want anywhere on the screen. This Imitation would preclude the use of character graphics in some appitcattons. However, there remain many graphics applications for which the program need display only a limited number of predefined shapes in fixed locations. In these cases, character graphics provide great utility.

I really don't know. I am using OmniPage Pro for Windows 95. Some
pages just seem to run longer than others. chapter 3 looked a little
better because I turned off word wrap in netscape news....

I'll get better as time goes by, and I am sure I will have time to fix
up the first three chapters.

As for doing a chapter this weekend...how about chapter three?

> I tell if a drive is RLL? I don't even know what RLL
stands for.
>
> -c

The MIO does indeed provide a SCSI port, and unless you choose to run an MFM or RLL drive, you do not need a separate controller card to run a SCSI drive.

I love my MIO's, but I should perhaps add that it uses 256 byte sectors, so you do need to find a drive which is capable of being used in such a fashion. Some of the newer drives simply won't work.

The Shadow

PS: Everyone, please note the change in my E-Mail Address, and update everything, everywhere, to reflect it. Thanks.

2973. Atari Auction Update

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-30 00:00:00 UTC
From: sseago9073@aol.com

```
Atari Hardware / Software Auction

Please send bids to wesseago@juno.com
Please include your name, address, phone number,
item bidding on, and bid.

Bid increasements are as follows:
items less than $10 = $1
items $10 and over = $2

Auction will run through November 2.
All items will be going once on October 29,
going twice on October 31, and sold on November 2.

Hardware
--------------------------------------------------
Atari 800 XL with power supply----------agte@spocom.com $16
Atari 400 with power supply----------agte@spocom.com $16
Atari 1050 with power supply----------malyszka@dreamscape.com $23
Atari XM301 modem with box, manual,
and original disk--minimum bid $10
Atari 1025 printer----------agte@spocom.com $12
Atari 1010 recorder no power supply--minimum bid $5
Atari 410 recorder with box----------pmarsch@aol.com $5
Atari paddles new in box--minimum bid $3
Atari joystick new condition----------malyszka@dreamscape.com $3
Wico command control trackball--minimum bid $5
Pointmaster fire control plug in--minimum bid $1
Axiom AT846 printer interface--minimum bid $3

Software
--------------------------------------------------
--------------------------------------------------

Cartridges--minimum bid $3--carts only
--------------------------------------------------
pac man
ms. pac man----------jandc@ccnet.com $4
computer chess----------jeep@tc.fluke.com $5

minimum bid----------alan.diaz@snet.net

all items are sold as is...all have been tested.
shipping and handling extra...minimum $3
In the case of two equal bids, bid will go
to first bidder.

2974. A trip back in time (Atari 8-bit)

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-30 00:00:00 UTC
From: Nelson <nelson@dropmail.com>
Message-ID: <01bce4f1$bb8f1920$038508cf@Computer2.cybernetworking.com>
Source record: 69149

Hi All,

Wow! It's been about 1.1 to 1.5 years since I last did anything on my Atari 8-bit.

I am wondering if there are any programmers out there in Atari 8-bit land. Although I am not working on anything new I would like to hear from anyone with some interesting projects. My strengths are Action! and ATARI BASIC (XL, XE, ABC BASIC Compiler).

My favorite DOS is SpartaDOS X followed by SpartaDOS 3.2 (all flavors).

Today I played a few games (Donkey Kong Jr, Pole Position, PAC MAN, and even Frogger). Also went through my list of old Action! routines I had put together for various projects, such as the Undelete program for SpartaDOS X and 3.2 DOSes.

I am still fascinated by the bit-map (read/update) routine I put together. I still have the old BASIC routine I used to test my theories on before I started work on the Action! version. You wouldn't believe how many times I asked around for such a "beast" and no one had any ideas for me.

Anyway, just letting everyone know of my fascinating trip back to the past.

Nelson Nieves
NN Tools (SpartaDOS 3.2/X)

To everyone who doesn't want to earn any money I'm sorry. I'm not waisting your time... believe me, this is well worth it!
If you've seen those messages "Send one dollar to 5 people" or anything similar to that, this IS NOT ONE OF THEM!!!
Those messages, even though most of them claim to be legal, are illegal. If you don't believe me, then check out the
post office homepage. Read on...

You are looking at the most unique MONEY MAKING program ever created for your "PC" and compatables!!!
PC-SUPER-MLM (PSM), has demonstrated and proven the ability to generate large sums of money.
This program is showing HOT results with a huge and ever growing population from all over the world which needs additional income working from home with a "PC" or compatable.This program will work for you if
you carefully follow the instructions available in the PSM Software. This Computer Program is the
electronic version of the most simple and profitable Multilevel Marketing program ever devised and works
perfectly 100% EVERY TIME! You can use this program to raise capital to start another business, pay off debts,
buy homes, cars, etc., even RETIRE! This is your chance, so don't pass it up!

go to http://www.pla-net.net/~eggnog/index.html and download the program for more information.

(temporary server until I get my domain name registered. Please do not bother the person who was generous
enough to give me this space. He has done nothing to you.)

If you can't get through to the server or you have some other problem, e-mail may_17th_2002@hotmail.com and I
will answer your questions. Thank you, and I'm sorry to take up your time if you are uninterested.

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or
keep track of your Mailing/Shipping address. To expedite your order,
include your Mailing/Shipping address and it wouldn't hurt to include
your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff
that needs work you can have some ***FREE*** Atari stuff for the cost
of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard
Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some
thing you've been looking for, Something you might want & something New
to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml.
And Jump to my FTP site linked to my Web Site so you can Download Free
Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's no inconvenience. I do ask that you specify Atari
8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not
Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles,

Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it

from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

>
Fido is still alive, but barely. Not only does the echo seem to have periodic glitches, but message numbers are way down even on normal days. But Frank Walters, myself, Andy Floyd, Paul Alhart, to name a few, are still active. Larry Black is still moderating.

There are a few networks going on. One, particularly in PRO, was going to Europe but seems to have stopped temporarily. I believe the node list was published in this ng about a week ago.

I also believe, although I can't get to them, that there are still one or two nets going on the Carina side.

The linking to which you refer has been discussed, tried, and never really accomplished. As I understand it, programs to deal with differences in headers, message length, packet protocols, etc., have been tried, but never fully implemented, making it a difficult manual conversion job for the sysops who would be involved in such linking. BUT, there are probably individual sysops who still carry this ng, for example. I imagine it was easier with the listserv running, but that's gone, too.

Don't give up hope. I'm neither a sysop nor a programmer, but I hear talk about what you describe all the time. Some day, somebody just might get it going!

Cowpoke,
The only list that I know of specifically for the MI/O was in the back of
the MI/O manual. That document is available at
ftp://archive.umich.edu:7055/11/atari/8bit . The file is called MIOMAN.ZIP.
This file contains a few file format versions of the original MI/O manual.

2982. DE RE ATARI - Read me

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-30 00:00:00 UTC
From: AsciiRider <notimportant@atall.com>
Message-ID: <3458B807.1AB9@atall.com>
Source record: 69157

Following are the first two chapters of the famous De Re Atari.

If there is any response from this post I will be happy to do
more chapters. The format of the book works well with OCR, and
I happen to have access to a 60 ppm scanner.

I have not proofread this document. I do have the OCR App set up
to tell me EVERYTHING it doesn't understand, so everything should
be pretty accurate. However, there are some figures that will
need to be imaged. I am uncomfortable with this as I would
like this to remain a strictly ASCII text file, but maybe I (or
somebody else) can put up a web page sometime. If there is a big
enough response, I will go back and draw the diagrams with ASCII
characters - or perhaps somebody will volunteer.

I also need to do the Table of contents.

Let me know what you think, respond only here please.

AsciiRider

41 Jump and watt for vertical
E0 blank to display list which
7B starts at $7BEO

As you can see, This display list is short---only 32 bytes.
Most display lists are less than 100 bytes long. Furthermore, they
are quite simple in structure and easy to set up.

To implement your own display list you must first design the
display format. This is best done on paper. Lay out the screen image
and translate it. into a sequence of mode lines Keep track of the
scan line count of your display by looking up the scan line
Requirements of the various modes in Figure 2-1. Translate the
sequence of mode lines into a sequence of ANTIC mode bytes. Put
```

three "blank 8 lines bytes ($70) at the top of the list Set bit 6 of the first display byte (that is make the upper nybble a 4). This makes a load memory scan command. Follow with 2 bytes which specify the address of the screen RAM (low then high). Then follow with the rest of the display bytes. At the end of your display list put in the JVB instruction ($41) and the address of the top of the display list Now store all of these bytes into RAM. They can be anywhere you want; just make sure they don't overlay something else and your JVB points to the top of the

display list The display list must not cross a 1K address boundary. If you absolutely must have it. cross such a boundary, insert a JMP instruction just in front of the boundary. The JMP instructions's operand is the address of the first byte on the other side of the boundary. Next you must turn off ANTIC for a fraction of a second while you rewrite its display list pointer. Do tints by writing a 0 into SDMCTL at location $22F. Then store the address of the new display list into $230 and $231 (low then high). Lastly, turn ANTIC back on with a $22 into SDMCTL. During the vertical blank, while ANTIC is quiet, the operating system (OS) will reload ANTIC's program counter with these values.

WRITING TO A CUSTOM DISPLAY LIST SCREEN

Screen memory can be placed anywhere in the address space of the computer. Normally the display list specifies the beginning of the screen memory with the first display instruction---the initial LMS instruction However, ANTIC can execute a new LMS instruction with each display line of the display list if tints is desired. In This way informat Ton from all over the address space of the computer can be displayed on a single screen. This can be of value in setting up independent text windows.

There are several restrictions in your placement of the screen memory. first screen memory cannot cross a 4K address boundary. If you cannot avoid cross ing a 4K boundary (as would be the case in BASIC mode 8, which uses 8K of RAM) you must reload the memory scan counter with a new LMS instruction. Second, if you wish to use any of fee
operating system screen routines you must abide by the conventions the OS uses. This can be particularly difficult when using a modified display list in a BASIC program. If you alter a standard display list from a BASIC program and then attempt to PRINT or PLOT to the screen, the OS will do so under the assumption that the display list is unchanged. This will probably result in a garbled display

There are three ways the display can fall when you attempt tints. first BASIC may refuse to carry out a screen operation because it is impossible to do in the graphics. mode that the OS thinks it is tn. The OS stores the value of the graphics mode that it. thinks is on the screen in address $57. You can fool the OS into cooperating by poking a different value there. Poke the BASIC mode number, not the ANTIC mode number.

The second failure you might get arises when you mix mode lines with different screen memory byte Requirements Some mode lines require 40 bytes per line some require 20 bytes per line and some require only 10 bytes per line. Let's say that you insert one 20-byte mode line Into a display list with 40 byte mode Lines/ Then you PRINT text to the display. Everything above the interloper line is fine, but below it. the characters are shifted 20 spaces to the right. This is because the OS assumed that each line would require 40 bytes and posit toned the characters accordingly. But ANTIC, when it encountered the interloper line took only 20 bytes of what the OS thought should be a 40-byte line ANTIC interpreted the other 20 bytes as belonging to the next line and displayed them there. This resulted in the

next line and all later lines being shifted 20 spaces to the right.

The only absolute way around This problem is to refrain from (using BASIC PRINTs and PLOTs to output to a custom display list screen. The quick-and-dirty solution is to organ ize the screen into line groups that contain integer multiples of the standard byte requirement. That is, do not insert a 20-byte mode line into a 40-byte display instead insertr two 20-byte lines or one 20-byte line and two 10-byte lines So long as you retain the proper integer multiples, the horizontal shift will be avoided.

This solution accentuates the third problem with mexed display lists and BASIC: vertical shifts. The OS positions screen mater ial vertically by calculating the number of bytes to skip down from the top of the screen. In a standard 40-byte line display, BASIC would position the characters onto the tenth line by skipping 360 bytes from the beginning If you have inserted four 10-byte lines BASIC will end up three lines further down the screen than you would otherwise expect. Furthermore, different mode lines consume different numbers of scan lines, so the position on the screen will not be quite what you expected if you do not take scan line costs into account.

As you can see, mixed mode displays can be difficult to use in conjunction with the OS. Often you must fool the OS to make such displays work. To PRINT or PLOT to a mode window, POKE the BASIC

mode number of that window to address $57, then POKE the address of the top left pixel of the mode window into locations $58 and $59 (low then high). In character modes, execute a POSITION 0,0 to home the cursor to the top-left corner of the mode window. In map modes, all PLOTs and DRAWTOs wi I I be made using the top-left corner of the mode
window as the origin of the coordinate system.

The display list system can be used to produce appealing screen displays. Its most obvious use is for mixing text and graphics. For example, you could prepare a screen with a bold BASIC mode 2 title, a medium size BASIC mode 1 subtitle, and small BASIC mode 0 fine print. You could then throw in a BASIC mode 8 picture in the middle with some more text at the bottom. A good example of tints technique is provided by the display in the ATARI States and Capitals program.

The aformentioned problems will discourage the extensive use of such techniques from BASIC. with assembly language routines, modified display lists are best used by organizing the screen into a series of windows, each window having its own LMS instruction and its own independent RAM area.

APPLICATIONS OF DISPLAY LISTS

One simple application of display list modifications is to vertically space lines on the screen by inserting blank line bytes. This will add some vertical spacing which will highlight critical messages and enhance the readability of some displays.

Another important use of display list manipulations is in providing

access to features not available from BASIC. There are three text modes supported by ANTIC that BASIC does not support. Only display list manipluations gain the user access to these modes. There are also display list interrupt and fine scrolling capabilities that are only available after the display list is modified. These features are the subjects of Sections 5 and 6.

Manipulations with the LMS instruction and its operand offer many possiblities to the creative programmer. For example, by changing the LMS during vertical blank, the programmer can alternate screen images. This can be done at slow speed to change between predrawn displays without having to redraw each one. Each display would continue to reside in (and consume) RAM even while it. is not in use, but it. would be available almost instantly. This technique can also be used for animation. By flipping through a sequence of displays cyclic animation can be achieved. The program to do tints

would men ipulate only 2 address bytes to display many thousands of bytes of RAM.

It is also possible to superimpose images by flipping screens at high speed. The human eye has a time resolution; of about 1/16 of a second, so a program can cycle between four images, one every 1/60 of a second, so that each repeats every 1/15 of a second. In This way, up to four images can appear to reside simultaneously on the screen. Of course, there are some drawbacks to This method. first four separate displays may well cost a lot of RAM. Second, each display image will be washed out because it. only shows up one quarter of the time. This means that the background of all displays must be black, and each image must be bright. Furthermore, there will be some unpleasant screen flicker when tints technique is used. A conservative programmer might consider cycling between only three or even only two images. This technique can also be used to extend the color and luminosity resolution; of the computer. By cycling between four versions of the same image each vers ton stress ing one color or luminosity range, a wider range of colors and luminosities is available. For example, suppose you wish to display a bar of many different luminances. first set your four color registers to the values:

Background: 00

Playfield 1: 02
Playfield 2: 0A
Playfield 3: 0C

2-10

ANTIC AND THE DISPLAY LIST

Now put the following images into each of the screen RAM areas:

Pixel Contents (by Playfield Color Register)

first frame 1 1 1 1 2 3 2 3 2 3 2 3
Second frame B 1 1 1 B B 2 3 2 3 2 3
third frame B B 1 1 B B B B 2 3 2 3
Fourth frame B B B 1 B B B B B B 2 3
Effective luminance x4 2 4 6 8 10 12 20 24 30 36
40 48

Perceived luminace

in This way, much finer luminance resolutionis possible.

A final suggestion concerns a subject that is laden with opportunities but little understood as yet: the dynamic display list This is a display list which the 6502 changes during vertical blank per sods. It should be possible to produce interesting effects with such lists For example, a text editing program dynamically inserts blank Lines/ above

and below the screen line being edited set it. apart from the
other Lines/ of text. As the cursor is moved vertically, the display
list is changed. The technique Is odd but very effective.

2984. SIO2PC/COMM problem

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-30 00:00:00 UTC
From: Nelson <nelson@dropmail.com>
Message-ID: <01bce568$463e9fc0$038508cf@Computer2.cybernetworking.com>
Source record: 69159

I recently setup my old 8-bit system and have come across the following:

I have a few problems that I didn't have before: 1) my Start/Select/Option keys are no longer operational. This I thought at first could be that I need to purchase a new keyboard for the 130XE, 2) I have problems with my IBMs not able to send data to the Atari. The Atari can send data to the IBMs but does not receive data from the IBMs. I tried both an SIO2PC and a direct null modem connection. Same problem with both. To me it has to be a comm problem seen as the SIO2PC also connects to the COMM ports on the IBM.

The IBMs are fine, they can communicate with each other back and forth.

Any ideas, could the Start/Select/Options keys not functioning be a significant part of why my Atari does not receive chars. I just don't know enough about the architecture of the machine.

Nelson

The line width on your newsreader software is just a few characters
narrower than your text editor. (?)

BTW, I have De Re Atari in print and nothing else to do this weekend.
Pick a chapter and I'll see how much I get done.

Hi Thomasz,

Do you own an Atari 850 interface or an ICD PR: Connection? You'll need an RS-232c interface box to be able to make your connection, the next thing you'll need is a Null-Modem cable. What are you trying to do, simple transfer files back and forth between your PC and your Atari 8-bit? You may want to consider looking in an SIO2PC system, it works quite quite and is easy to build or cheap enough to have built.

Curt

Mapping? Yeah...I thought about it...but it is SOOOO formatted and
such....It would take an awful lot of time to fix up after the OCR...and
that is something you REALLY want to be accurate. I am interested in
doing it though. I am for doing anything that would help talented
begining programmers (unlike myself) write some new software for this
calculator on steroids that I love so much.

I know it was discussed before, but nothing came of it. And isn't the
author hardcore about his copyright still?

Atari Hardware / Software Auction

Please send bids to wesseago@juno.com
Please include your name, address, phone number,
item bidding on, and bid.

Bid increasements are as follows:
items less than $10 = $1
items $10 and over = $2

Auction will run through November 2.
All items will be going once on October 29,
going twice on October 31, and sold on November 2.

Hardware
--------------------------------------------------
Atari 800 XL with power supply----------jc7664b@american.edu $20
Atari 400 with power supply----------agte@spocom.com $16
Atari 1050 with power supply----------bodo.martin@rz.uni-jena.de $25
Atari XM301 modem with box, manual,
and original disk--minimum bid $10
Atari 1025 printer----------agte@spocom.com $12
Atari 1010 recorder no power supply--minimum bid $5
Atari 410 recorder with box----------pmarsch@aol.com $5
Atari paddles new in box--minimum bid $3
Atari joystick new condition----------malyszka@dreamscape.com $3
Wico command control trackball--minimum bid $5
Pointmaster fire control plug in--minimum bid $1
Axiom AT846 printer interface--minimum bid $3

Software
--------------------------------------------------
--------------------------------------------------

Cartridges--minimum bid $3--carts only
--------------------------------------------------
pac man

2991. OASIS BBS software

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-30 00:00:00 UTC
From: Alan Christie <94chrisv@scar.utoronto.ca>
Message-ID: <Pine.GSO.3.95.971030180155.1066B-100000@fissure.scar>
Source record: 69166

Does anybody here remember OASIS BBS software? (I ran a board on OASIS 4.7 a few years back, nice little BBS program, used little hard drive space, but suffered from a poor file processor and even worse message base processor) I remember Glenda Stocks sold the rights to a friend of mine in Toronto, Ontario. He was working on OASIS 5.0. I saw a prototype of it, and it was very strong. Supported over 27 message bases (3 times more than the old 9 message base limit of Oasis 4.x)

After I sold my registered version of Oasis 4.7 and Oasis Support board just disappeared. My question is, is there anybody out there can tell me the fate of OASIS BBS software? I don't even know if the guy that bought it, even lives in Toronto anymore. (HIs BBS lines are gone)

*full automatic floppy speeder (speedy,happy etc.)
*two ramdisk drives at the same time
*diskcopier in os
*drive assign per key click
*file loader (you don't need a dos or game dos on disk)
*basic and cartridge controll
*built-in cas-simulator
*asm monitor
*freezer for game pokes
*freeze and reload in/out ramdrives (sort of multitasking)
*many function keys (cursor control,speed control,ctrl+4-9)

removed features:
- self test
- cassette handler (now the cas-simulator)
- international charset

You can ALWAYS reboot by key, enable a XL-mode and turn on/off floppy
enhancments

enough for you?! ;-)

Don't Fear's Huge 3rd Auction Part 2: (update 4)

1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to
send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to
play can you spot the two classic game collectors. Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This part of the auction features the following:

Aquarius - 8 Items Arcadia 2001 - 8 Items
Farichild - 6 Itmes Colecovision - 39 Items
Intellevision - 132 Items Vectrex - 21 Items
Nintendo - 4 Items TI-994A - 19 Items

2998. Blue Tassles Issue

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-30 00:00:00 UTC
From: Stephen Knox <gooch@erols.com>
Message-ID: <345931BC.BE399193@erols.com>
Source record: 69173

Ok,

I decided to fire up the ole 8bit and blow the dust off my Ultima II diskettes to resolve the Blue Tassles issue. Without much detail I was able to get Blue Tassles, Skull Keys, Brass Buttons, etc... without going into a Tower of Dungeon. It took me about 20 mintues to accomplish this. I didn't buy Ultima II the moment it came out for the 8-bit but it is the original brown Sierra Disks.

Anyhow,
Here's what I had to do (warning, startup spoilers)

I started out as a Thief with:
Str - 35
Agility - 30
the rest 10's

I first went and stole some weapons and armour. I was able to get a sword and plate

I then took the time door to get to LB castle. I purchased as many HP's as possible
I think went to the town on the same island and stole food (which is very easy with a Thief)

So I had 2000 HP and 2500 food. I rturned to the time I came from and bagan whomping on everything in sight. I cintinued to steal food and such and whomping on monsters.

I wasn't having alot of luck getting Tassles (got everything else) so I swicthed to the Pangea timezone. The 1st thief I killed I got tassles.

The reaon the above is a spoiler is that my character in 20 mintues was able to kill most things. With everything I had (I now had ships) I could just rack up the money and increase my stats until I could go into space blah blah blah.

Happy Hunting.

I have here some other 5200er cracks made by "mickey mouse and derrek" .
for example: Dig Dug, Centipede 5200, Jr.Pacman and of course Gremlin.All
games with better graphics and gameplay.

Could you send me a copy of Berzerk?

I say more power to those wo do the seeming impossible, or the
thing just because it is there to be done. I think it would be
both a testament to the power of the machine and the talent of
the programmer if a computer with an operating system and architearchitecture from 1977 can
surf the WEB in 1997. Remember that
it was one of the wright brothers that said that man would not
fly for a thousand years, yet three years later- guess who flew!?

My base system would be a 130XE, an MIO/BB, and a Hard drive.

3004. Re: Favorite Infocom text adventure?

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-30 00:00:00 UTC
From: eplicon@aol.com
Message-ID: <19971030025101.VAA16896@ladder02.news.aol.com>
Source record: 69179

The Infocom games that were my all-time favorites would be their early works -- Enchanter, Sorcerer, Planetfall, Deadline, Zork Trilogy, among others.

I actually found "Hitchhiker's" to be vastly overrated. Very humorous yes; but a very boring game that was nothing more than collecting every damn thing in sight. It lacked any adventure or awe. Also this was one game where if you missed a step, you were dead in the water. I remember when I first got the game, I was pulling my hair out because I was stuck on the Heart of Gold for three or four hours -- and this was w/o the Babel fish, no less!

Favorite Infocom authors: of course, Steve Meretzsky. I also liked Michael Berlyn's efforts. His prose was easily the most readable (helps to be an established writer, I guess). I never really liked Dave Lebling's solo efforts. It lacked some of the great spunk when he co-wrote with Marc Blank. So Lebling's work -- Starcross, Spellbreaker, Lurking Horror, Suspect, etc. were among my least played games.

Anyway, these games are still fun to play today, as they've thankfully been re-released for the PC. Nowadays I play just to see how many variations I can get towards the endings, or how many other ways I can get killed that I didn't achieve previously. Getting the **** You have died **** is still probably one of its best attributes. <g>

Anybody here that can list the drives that do work with the MIO ? I have an Adaptec 4000a and two 20Mb MFM drives (actually they're 30Mb, but only 20Mb comes up as usable) Kyocera KC-30. And I got Seagate ST225 to work nicely!
Take Atarian care!

> the rest 10's

More or less what I did. The only way I found that a character can
survive is if they have high agility to start with.

> So I had 2000 HP and 2500 food. I rturned to the time I came from and
> bagan whomping on everything in sight. I cintinued to steal food and
> such and whomping on monsters.

My characters been around for some time now. Level 13, loadsa weapons
(I use a phaser and chain at present). The guy by the pool in New
San Antonio has been most generous, as well as LB's Vault.

> I wasn't having alot of luck getting Tassles (got everything else) so I
> swicthed to the Pangea timezone. The 1st thief I killed I got tassles.

Now you say you have everything else. The only items I have
ever received in combat are:
Green Gems, Strange Coins, Staff, Helms. (oh, and Keys from guards)

Nothing else, ever. I have never noticed Brass Buttons or Blue
Tassles and I have pretty much slaughtered characters in all the
timezones (except Legends...). I have killed many thieves; I
shall have one more last go but I think I have the bugged version.

> The reaon the above is a spoiler is that my character in 20 mintues was

> space blah blah blah.

I'm not using a PC emulator, I'm using a bona fide 8-bit. I'm not sure where to get a correct copy from. Maybe when I get a PC one day...

Thanks anyway. At least I know it's not my fault that I haven't progressed.

- Joel

Guess what. I messed up. I combined the gopher and ftp URLs. It should be
ftp://atari.archive.umich.edu/atari/8bit . The file is called MIOMAN.ZIP.
I just checked and the file disappeared, but I sent it to Bill Kendrick to
put back up. It should be there soon.

The Manual was distributed by the Atari POrogram Exchange and
copyright Atari 1982.

According to the preface:

Chris Crawford wrote Sections 1 through 6 and Appendices A and B
Bob Fraser wrote Section 7.
Jim Dunion wrote Sections 8 and 9.
Lane Winner wrote Section 10 and Appendix D with assistance from Jim
Cox.
Amy Chen wrote Appendix C.
Kathleen Pitta wrote Appendix E.
Gus Makreas prepared the Glossary.

As I understand it, artifacting as a consequence of the NTSC format and filtering
used in the TV set. Can anyone confirm whether or not artifacting works on one
of the modern sets with SAW filters?

I agree!

I read in a game manual (some "space-war" game) about how the game was creating
the space ships it self rather than using the ST's "sprite routines".
Does the ST not have real sprites?

>perfected their knee-jerk reaction to company logos. Many Atari
>zealots lost out on their oportunity to be involved with the
>next-Generation Atari as it happened. (Or as ANALOG called the
>Amiga before the ST came out, "Not the next generation Atari, but
>the one after that.")

Actually this is because some of the engineers that created the Atari were in
on the Amiga.(including Jay Miner,I believe)
It was being developed by Amiga to be sold to Atari as their new computer but
then the Tramiels took over and Amiga instead sold their system to Commodore
since they'd be deep down in the ground before they let Jack get his tentacles
on their baby.Of course Commodore ruined it anyway.
(like how they made "*" a alias for "#?".But "*" was already being used for the
Amiga's version of UNIX's "/dev/tty"
(And don't mention "CONSOLE:" to me,the name doesn't even make any sense))

Of course the BASIC was really limited.Nothing like the "XIO" command on the
Atari.But that's MicroSoft for you.
And it doesn't have a text mode.So everything's like those Atari 80-column term
programmes.So there's no reason to get a modem faster than 9600bps other than
downloading.(and you get the flicking like you do in ST BASIC)

What exactly is a "Graphics OS"?
Do you mean the S: device?

>problem is getting a fast enough JPG decoder I guess! Good luck
>William Kendrick, hope you make it and as I always say ; Take
>Atarian care everybody. BTW : Are you seriously thinking of
>learning assembler, William ? Do so, and maybe you can make it work
>;-) Greetz from Hawk of Pokey Soft

Well this would probably be done by the UNIX side.You would have JPEG files
convert to RGB (CVSquash) and THEN uploaded to the Atari.

>> Ha ha! I read somewhere that you really are working on this, so I
>>hope you consider my opinion that the browser should work on a
>>standard 64k machine, and be based in a 320 x 192 screen, not
>>some awkward scrolling arrangement.

Well it would have to scroll.Most HTML files contain more than 24 lines of
text.I would also want a option to control how many lines the programme gives
you.I use a monitor and can see a lot more than 192 scan-lines.
(and I can also see the whole 192 colour clocks of the "wide playfield")

>> If you are going to try to create such a browser that is your
>>business, but I think you are tilting at windmills. I am sure you
>>are an intelligent person but you should know your limits,
>>because no-one but a genius could pull off a graphic web-browser
>on a circa 1980 computer. >

But you could have a graphical term programme that uses a UNIX programme.
The UNIX side would convert the HTML and data files into usable format.
(RGB,MD8,CMC,AMP,AMS,PIC)

I notice that RGB (created with JVIEW's "Save CVSquash" option) are compressed.
I always thought that CVSquash just put ColourView's .R .G .B files into one
big 24k file.But the COLORS.GIF file that comes with COLRVIEW end up as a 9
(253-byte) sector file.
(I've never downloaded the CVSquash software and I've only used JVIEW for a
short time)
But you couldn't view text and 4096 colour pictures at the same time.
You could have 320x200x8 COLRVIEW mode and text.
(I don't know how readable the text would be)

Some PIC files are also compressed.(PIC=MicroIlustrator)

And we could have background music in the form of AMP,AMS and CMC.
(I think that Bill's right about the VBI thing;those CMC files are small!)
We might have a MIDI-to-CMC converter run on the UNIX side.
We might also want to create PC version of this software.
(for the 8086 real mode!)

The Atari side would probably be broken up into modules.These could be stored
in banked memory(not a RAMdisk) or on a disk.
It would work with 48k (with the 16k for SpartaDOS or UltraSpeed OS patch) but
would take advantage of more (including the OS shadow RAM).
And it would work WITHOUT SpartaDOS.
(that's what we have index files for)

Does anyone here have the PAL upgrade instructions for NTSC machines? I believe NIR DARY sp? came up with this hack. I have gotten a hold of a PAL Antic chip, and would like to give this a try.

Willy

>Does the ST not have real sprites?

Graphics work like a PC -- software bit-blitting. Images are drawn,
erased, and redrawn by the CPU. Later STs had a fairly primitive
hardware blitter added.

>Actually this is because some of the engineers that created the Atari were in
>on the Amiga.(including Jay Miner,I believe)

>It was being developed by Amiga to be sold to Atari as their new computer

The didn't intend to sell it to Atari. They did get a loan from Atari
to meet payroll, etc and the terms of the loan included handing over
the Amiga chipset if the loan was not repaid by a certain date.

>but
>then the Tramiels took over and Amiga instead sold their system to Commodore

>since they'd be deep down in the ground before they let Jack get his tentacles
>on their baby.Of course Commodore ruined it anyway.

They actually were desperate enough to give Jack several opportunities
to buy the Amiga company, but he didn't take advantage of the
opportunity. At the last minute (re: the terms of that loan they had
with the pre-Tramiel Atari) they got an offer from Commodore better
than what they were asking for the comapny.

>(like how they made "*" a alias for "#?".But "*" was already being used for the
> Amiga's version of UNIX's "/dev/tty"

Using * as a wildcard has been a setable switch since OS version 2.x.
Perhaps longer.

> (And don't mention "CONSOLE:" to me,the name doesn't even make any sense))

You mean CON: ? In a unix world it makes sense. "console" is the
primary input terminal. Usually the one that the sysadmin reserves
for himself. (i.e. the keyboard and monitor connected to the computer
itself rather than a "terminal" which is an input console connected
through a serial mux/net/whatever)

>Of course the BASIC was really limited.Nothing like the "XIO" command on the
>Atari.But that's MicroSoft for you.

It wasn't a particularly bad BASIC, but it violated many published
programming guidelines for the Amiga. (Typical MicroSoft) The end
result is that it won't run on any machine with memory outside of the
original 16M memory map. (i.e. most 32-bit accelerators with RAM)

>And it doesn't have a text mode.So everything's like those Atari 80-column term
>programmes.

???Errr...what?

>So there's no reason to get a modem faster than 9600bps other than
>downloading.(and you get the flicking like you do in ST BASIC)

You haven't see an Amiga in a long time I suspect. I routinely get
57.6K just fine in terminal programs and in a native Amiga graphics
mode or on a third party graphics board I don't get flickering.

If there was only a good 8-bit emulator for it.

Message-ID: <01bce63b$1e0da180$038508cf@Computer2.cybernetworking.com>
Source record: 69052

I have managed to get the Start/Select/Option keys working again.

Is anyone here using null modem or SIO2PC cables able to let me know how they have there system configured?

My Atari can send data out but cannot receive.

I am using an the MIO RS232 port for the null modem connection and SIO2PC for the SIO to PC connection. Both are not receiving from the IBMs.

3020. Re: Blue Tassles Issue

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-31 00:00:00 UTC
From: fseipel@freenet.columbus.oh.us
Message-ID: <fseipel-3110971837200001@ts8-4.homenet.ohio-state.edu>
Source record: 69054

I sent Joel the Ultima][character editor from my archive disks from my old Atari 8-bit BBS's -- archived back in 199o, whew, it's been a while... This will permit him to add the Blue Tassles to his inventory. Some hacker wrote the editor; it permits selective attribute editing, or creation of a "Super" character with maximum attributes and items.

I also sent him the walk-through. Curiously, the walk-through didn't mention the blue tassle problem, but this issue was discussed somewhere, either on the BBS's of the era, or on CompuServe, I forget which.

There was also a character editor for Ultima IV. I don't know about Ultima III.

In the case of two equal bids, bid will go
to first bidder.

3022. Don't Fear's Huge 3rd Auction Part 1 (update 5)

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-31 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <345A6C86.BD1E0920@prodigy.com>
Source record: 69056
Cross-posted to: rec.games.video.classic,rec.games.video.misc,rec.games.video.marketplace,rec.games.vectrex,rec.games.nintendo,comp.sys.atari.8bit

Don't Fear's Huge 3rd Auction Part 1 (update 5)

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds.
If you choose to send a personal check please allow 2-3 weeks for the
check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of
final bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to play can you spot the two classic
game collectors.
Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This part of the auction features:
Atari 2600 - 308 Items Atari 5200 - 31 Items

3023. XL256k mod questions

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-31 00:00:00 UTC
From: miljenko@mapef.pefri.hr
Message-ID: <3459a1c3.91867748@news.carnet.hr>
Source record: 69057

I find the explanations for this mod not clear enough.
Since I do not have any formal technical education
and no documentation or blueprints of my 1200XL,
I have some difficulties finding what are some of the
connection points described in the document.

Could somebody post more understandable
instruction or diagram?

Mike

ATARI 800 system with color monitor, external floppy drive, 3 joysticks (not sure of the working condition of these), Okimate 10 color printer, 26 game cartridges, manuals, diskettes, and assorted books. Also included is an Atari 400 base unit only. There is also a Super Sketch attachment. These items will require 4-5 boxes for shipping. Shipping costs will be paid by the seller, provided the minimum bid price is reached or exceeded. Otherwise, the buyer will be expected to pay for shipping.

The link to the site is

3032. problems with null modem

Newsgroup: comp.sys.atari.8bit
Date: 1997-10-31 00:00:00 UTC
From: unclebigbad@hotmail.com
Message-ID: <345944ff.3809190@atlink.it>
Source record: 69066

First off I want to thank everybody that helped me out a few weeks ago with questions I had on my new 130XE. I tried to reply to everybody but some messages got bounced back.

I'm finally starting to get that 130XE I bought a few weeks ago up and going. I ended up going back to that Thrift store and buying that second 1050 drive and while I was there I found an 850 interface for a $1.50! Someone sent me a ton of 8 bit disks (thanks Gail!) and I found several BASIC terminal programs on them. One called Proterm just locks up the system with a blank screen. I have two others one called AMODEM4 and the other JTERM. They both seem to work, only problem is that when I hook the 130XE to my PC with a null modem adapter in between I can send characters from the Atari to my PC, however; I can't send characters from my PC to the Atari.
I'm going from the 9 pin 850 to a 25 pin which then goes to a null modem adapter (25 pin) and then to my PC which is also 25 pin.
The comm port on my PC is ok because I can communicate with an external modem.

Anybody have any idea's on what I'm doing wrong?

Thanks,

George Torch

3033. Silly Stuff Give Away

Newsgroup: comp.sys.atari.8bit

The basement odyessey continues.

For anyone who wants them (but you must pay for shipping)

LEFTY - SUNCOM Joystick Adaptor "Converts Atari-type joystick
controllers for easier use by left handed players"

Miscellaneous computer covers

I do have a couple of brown canvas Atari 400 with the logo

The rest appear to be vinyl and plastic for different computers
(IBM, Commodore, Mindset as well as some Atari peripherals)
Ask and I'll check what's in the rest of the box.

Thanks

Jack

3034. Re: Favorite Infocom text adventure?

Yes,

You can construct a SIO2PC cable which will allow you to transfer files to and from the PC. You will need your Atari 8bit in order to do this as the SIO2PC turns your PC into a virtual disk drive.

My basic setup is as follows:

Atari 800 hooked into a 1050 drive which is hooked into the SIO2PC cable (mouse port to sio).

I boot the 800 from the 1050 with DOS 2.5 and copy the files from my virtual drive 2(SIO2PC) onto my 1050. Works like a champ.

Later,
Steve

Atari Hardware, Sio2pc, Software For Sale

Hardware:

$20/each (4) 1050 disk drive w/power supply & data cable
$12 800 48K computer, stock, power supply
$9 800 48K computer, stock, power supply, missing one keycap
$10 130XE 320K computer, no power supply, function keys flakey
$15 800XL 64K computer, power supply
$0 (2) 1010 cassette drives, no cable, no power
$5/each (2) PILL cartridge backup & software
$25 sio2pc cable, original version, software
$10 2600 system with 40 games
$25 Star SG-10 9 pin dot matrix printer, PC printer port interface
$5 MPP-1150 printer interface
$5 Xetec graphics AT printer interface
$1 half of atari serial cable, good for making sio2pc

Cartridge ($40 for all, $25 excluding Mac65,BasicXe):

$2 Atariwriter (manual)
$2/each Assembler Editor (2) (1 manual)
$0.50 BASIC
$10 Mac65 Assember (manual)
$10 BasicXE (manual, disk)
free TelelinkII
$1/each Pacman (2)
$3 Robotron
$4 StarRaiders
$4 Eastern Front (manual)
$0.50 Krazy Antics
$2 Star Trek
$3 Lode Runner
$2 Defender
$2 Missle Command
$1 Caverns of Mars
$2 DigDug
$2 Centipede

Disk ($20 for all):

$2 Print Shop (manual), Print Shop Graphics
$1 F15 Strike Eagle (manual)
$1 Summer Games, Winter Challenge
$1 Family Finances II, Bank St. Writer
$5 Seven Cities of Gold

$1 Karateka
$1 PitstopII
$5 One-on-One (DrJ vs. Bird)
$1 Gulf Strike
$1 Hitchhiker's Guide
$1 Omnitrend's Universe
$1 Pinball Construction Set
$1 SpartaDos 3.2 (manuals)

Books ($20 for all):

$2 6502 Applications by Rodney Zaks
$2 Machine Language for Beginners by Mansfield
$2 Second Book of Machine Language by Mansfield
$2 Mapping the Atari, 1st Edition
$3 Mapping the Atari, Revised Ed.
$1 Atari Programming w/55 programs (BASIC) by Schreiber
$1 6502 Assembly Language by Lance Leventhal
$3 SAMS 800XL schematics
$1 Antic magazine - parallel bus articles
$5 Technical Reference Manual, OS source listing
$5 De Re Atari
$1 Basic Reference Manual
free 40lbs of Compute! and Antic magazines

Terms:
prepaid cashiers check or COD
shipping paid by buyer
minimum purchase $10
Will verify that everything works before shipping
Make an offer on any combination of the above

I'm looking to buy a copy of MULE for the Atari 800. Given that this will be on o-l-d media, I'm very interested in making a personal backup to play off of, but I understand that this game is copy protected. What is the best way to duplicate this disk?

Im using a bonafide 8-bit with original disks.

When I play it on the emulator I never seem to get enemies.

Later,
Steve

3043. problems with null modem

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-02 00:00:00 UTC
From: unclebigbad@hotmail.com
Message-ID: <345cbe0e.1380637@news.icongrp.com>
Source record: 68982

First off I want to thank everybody that helped me out a few weeks ago with questions I had on my new 130XE. I tried to reply to everybody but some messages got bounced back.

I'm finally starting to get that 130XE I bought a few weeks ago up and going. I ended up going back to that Thrift store and buying that second 1050 drive and while I was there I found an 850 interface for a $1.50! Someone sent me a ton of 8 bit disks (thanks Gail!) and I found several BASIC terminal programs on them. One called Proterm just locks up the system with a blank screen. I have two others one called AMODEM4 and the other JTERM. They both seem to work, only problem is that when I hook the 130XE to my PC with a null modem adapter in between I can send characters from the Atari to my PC, however; I can't send characters from my PC to the Atari.
I'm going from the 9 pin 850 to a 25 pin which then goes to a null modem adapter (25 pin) and then to my PC which is also 25 pin.
The comm port on my PC is ok because I can communicate with an external modem.

Anybody have any idea's on what I'm doing wrong?

Thanks,

George Torch

3044. Phantasie question

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-02 00:00:00 UTC
From: ksinner@solaria.sol.net
Message-ID: <878492205.635187@smyrno.sol.net>
Source record: 68983

I have played the game Pantasie on my 130XE, but I couldn't finish the
game because I couldn't get the last two rings. Someone on the net
told me that these two rings (I forget which ones) are gotten as part
of a set of three at one certain location. But I was there (twice),
and there was only one ring there. I figure there are several
possibilities: 1) The person who gave me the advice was mistaken,
2) The advice came from someone who was playing on a different platform,
and the rings were in a different place in the 8-bit Atari version,
or 3) there is a bug in the 8-bit Atari version, or in my copy of it.

So, could someone who has finished the 8-bit Atari version tell me where
all 9 rings are?

Thanks.

Don't Fear's Huge 3rd Auction Part 2: (update 7)

1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to
send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to
play can you spot the two classic game collectors. Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Hi. I have the following system for sale. Shipping extra. Excellent working order.

- Atari 800 64K
- 1050 Floppy drive
- 850 interface module
- 410 cassette recorder
- 825 printer with 5 new ribbons
- Atari Trackball
- all cables including modem and monitor cables
- all power supplies
- Software: Dos 2.5, a few games and utilities (most in original box)
- Books: "Your Atari Computer" reference, 850 Interface Manual

Price: $50 for everything. Will not sell seperately.

Please E-Mail me if interested.

Thanks, Walid.

I posted a message that stated the CO4051 controled the joystick ports,
don't know what I was
thinking at the time but it is incorrect, that chip controls the
Keyboard.

Joy stick controler is actually CO 12294, if that doesn't work then
replace the 6520 (CO14795)

Sorry for the miss post.

Bob

```
Atari Hardware / Software Auction

Please send bids to wesseago@juno.com
Please include your name, address, phone number,
item bidding on, and bid.

Bid increasements are as follows:
items less than $10 = $1
items $10 and over = $2

Auction will run through November 2.
All items will be going once on October 29,
going twice on October 31, and sold on November 2.

Hardware
--------------------------------------------------
Atari 800 XL with power supply----sold------jc7664b@american.edu $20
Atari 400 with power supply------going twice----malyszka@dreamscape.com $18
Atari 1050 with power supply---sold---bodo.martin@rz.uni-jena.de $25
Atari XM301 modem with box, manual,
and original disk--minimum bid $10
Atari 1025 printer----------------sold-----------agte@spocom.com $12
Atari 1010 recorder no power supply--minimum bid $5
Atari 410 recorder with box-------going once------------pmarsch@aol.com $7
Atari paddles new in box-----------Going twice--malyszka@dreamscape.com $3
Atari joystick new condition-----sold----malyszka@dreamscape.com $3
Wico command control trackball--minimum bid $5
Pointmaster fire control plug in--minimum bid $1
Axiom AT846 printer interface--minimum bid $3

I would be willing to pay you $50 for the stuff you advertised if you will confirm that

1) it's ready to assemble and all the parts are there and working to hook it to a TV and use it.

2) it is indeed a 64k Atari 800, not a 48k or less one, or a 800xl or something.

I would be willing to pay you in advance by postal money order, but would want to call you on the phone briefly to have some other avenue of reaching you if something goes wrong.

Dave

>game because I couldn't get the last two rings. Someone on the net
>told me that these two rings (I forget which

Well, I think you only need 8 to finish the game. Did you get the one that is for sale in a shop in the hidden town (can't remember the name of it) The only way to get there was to cast the town spell and it was town 0 or something. Anyway, just try entering numbers for the towns until you get there. Hope this helps!!!!

later,
Tom

3059. Need Ultima 1 and 2, have 1-6CD for trade

> 1) Does the 800xl come with an 80-column card built-in, or would I have to add
> it?
No Atari 8bit comes with 80 columns built-in, you have to add via
software or hardware.

>
> 2) Will the 800xl run most of my 400 carts and disks?
The 800XL will run 90-95% of your 400 carts and disks, I think Michael
Current created a list of 400/800 only 8bit programs.

>
> 3) Which keyboard is better (easier to type on), the 800 or the 800xl? (the
> 400 is quite difficult.)
I prefer the 800XL. I haven't use a 1200XL, but out of all these 8bits
400,800, 600Xl, 800XL, 65XE, 130XE I find the 800XL to have the BEST
keyboard.

> > 4) Is the 800xl worth the extra $3 I'd have to pay for it?
An Atari 800 might be worth more as a collector but I would argue the
800XL is a more versatile machine. Yes, $3 extra is fair. (Out of
curiousity how much are you paying for that Xl?)

3062. games that require translators? i.e. ALLEYCAT

Newsgroup: comp.sys.atari.8bit

It's been 12 years since I even looked at an Atari 2.5 DOS or MYDOS screen. I've been reveling in the emulators and all the old software that is out here. However I can't seen to remember what needs to be done to run some of the software like ALLEYCAT. I know it needed a translator or something but I can't recall all of it. Has anyone succesfully run this or similar games? What do I kneed, I've got XL-IT and XF36 emulators and a translator that I picked up somewhere.

I have seen and heard of null-modem adaptors going bad or even sold bad.
If you can find a spare that you know to work properly, try substituting
it. Also, go over all the connections and see that they are clean and
tight. Finally, check the cable from the 850 to the null-modem adaptor.
Is it the special 9-pin to 25-pin cable specifically designed for Atari?
Those made for the PC are wired differently and won't work, although they
usually lock up the system when tried.

I remember the 2600 Star Raiders keypad, a friend of mine had it. It
was all black and plugged into the joystick ports. If I remeber
correctly it had 12 black buttons with no markings on them. I think
it would take an overlay over the buttons which could be changed for
different games/programs. However Star Raiders on the 2600 is the
only game I know of that used it.

3070. percom disk drive

Newsgroup: comp.sys.atari.8bit

Hi All,

I may be able to get my hands on a big old percom disk drive.
Can anyone comment on the uniqueness of this product? What is
special about it? I already have 1050's, xf551's, and indus drives
to play with.

What is a reasonable price to pay for it?

BTW, I am still working on finding an embedded SCSI disk drive
for my MIO.

cowpoke.

>Gem-Drop is a vvery well-done game! Imagine if more programs were
>written to take advantage of this increased color graphics mode.
>How hard is it to do? Could a handler be written so that one
>could access and use this mode transparently?

Yeh,great game.But it's going blind me what with me staring at the
screen,un-blinking,for 5 minutes at a time.Neat pause effect,too.
The monochrome effect reminds me of the graphics in the Atari version of
Bomberman,Dyna-Blaster or somesuch.
I wish I could find it again.It was called "dynademo" or something since it was
the demo version of what was to be.

I just noticed that Bill says not to write-protect the disk and APE was bitching
about trying to use a un-registered feature in the SIO command-frame log so I
switched APE to 2X speed to be able to write.
(which has "USDoubler" next to it even thought the USD 1050s runs at (nearly)
3 times the speed of normal 1050s)
Now it saves the fact that I've reached 9th level.I just did that to-day.
(using my new 4-button Genesis joystick)
I couldn't get my 8-button one to work,though.

Remember that the PC-Mirror can't write at ANY speed!
You have to run GemDrop from a disk image.

I has software to allow the CX-85 to be used as a alternative to the keyboard.
(Nice for MONOPOLY)
You could assign each CX-85 key to a keyboard value.

It uses the joystick port.

3076. Don't Fear's Huge 3rd Auction Part 1 (update 8)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-03 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <345E8FCB.7D1E342@prodigy.com>
Source record: 69010
Cross-posted to: rec.games.video.classic,rec.games.video.nintendo,rec.games.vectrex,rec.games.video.misc,comp.sys.atari.8bit,rec.games.video.marketplace

```
Don't Fear's Huge 3rd Auction Part 1 (update 8)

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds.
If you choose to send a personal check please allow 2-3 weeks for the
check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of
final bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to play can you spot the two classic
game collectors.
Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This part of the auction features:
Atari 2600 - 308 Items Atari 5200 - 31 Items

This auction is dedicated to the Old Lady. Without her a lot of this would have been impossible. Thank You

3077. Don't Fear's Huge 3rd Auction Part 2: (update 8)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-03 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <345E9018.A5A248B4@prodigy.com>
Source record: 69011
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.marketplace,rec.games.video.nintendo,rec.games.video.misc,rec.games.vectrex

Don't Fear's Huge 3rd Auction Part 2: (update 8)

1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to
send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to
play can you spot the two classic game collectors. Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

I got most of Section 4 typed into my Psion this weekend. Just a page or two left. However, I have to go to a client site all week, so I'm won't be able to post the plain text until next weekend. Also, while I'm gone I can probably work on some of the short stuff in the manual.

(If anyone is interested, I can also hand it out as a Psion5 Word document and I've done some of the illustrations in Sketch too. I can also put this together in a FinalWriter97 document for people with Amigas. I also have PageStream, so I could DTP the entire thing and get the output as postscript files ready to be dumped to a printer.)

BTW, I am currently playing telephone tag with some people at JTS to find out the current disposition of the Atari 8-bit stuff (re: copyrights, etc.) (Would you believe the company is so small they don't have a separate legal office? I was routed to Human Resources where the attorney is.)

The Portland Atari Club is back, and we are now in the process of picking up the pieces and reorganizing the club.

Former President David Hunt has stepped back in as President, and is now interested in rebuilding the club back to it's former glory like it was under his past presidency.

The plans are veery ambitious, and he is planning on offering support not only for the 8-Bit and ST lines of computers, but also the Falcon, Jaguar, Atari 2600/5200/7800, and anyone using emulators on ANY platform!

We invite you to come and help us mold this club into one of the most dynamic clubs in the nation once again.

Our next meeting will be at the Round Table Pizza Parlor located across 122nd Ave, and just South of K-Mart on SE 122nd & Sandy Blvd. in Portland, Oregon.

Take I-205 to the Sandy Blvd. Exit, go East on Sandy to 122nd Ave, then several blocks South to Round Table Pizza on the West Side of the street.

The meeting will start 7:00pm on Tuesday Nov. 4th, 1997.

Come and join in, we want your input.

For further information, please contact Ben Smith, Vice President, (503)-256-9974 24hrs.

David Hunt, President

3081. Atari 800 vs. 800xl?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-03 00:00:00 UTC
From: pbjurman@aol.com
Message-ID: <19971103031800.WAA06978@ladder01.news.aol.com>
Source record: 69015

I might be interested in purchasing either an Atari 800 or an 800xl to replace my current Atari 400 computer. However, I need some info first.

1) Does the 800xl come with an 80-column card built-in, or would I have to add it?

2) Will the 800xl run most of my 400 carts and disks?

3) Which keyboard is better (easier to type on), the 800 or the 800xl? (the 400 is quite difficult.)

4) Is the 800xl worth the extra $3 I'd have to pay for it?

Thanks for the help!

-Sam

: care!

Hmm... I have one. Since I have access to a "Snappy" video digitizer
for the PC as well as a flatbed scanner, I guess I no longer need mine
(I haven't used it in a LONG time).

How much are you willing to pay? :) Or do you have something you can
trade me? (Normally, I just give stuff to people, but I'm so incredibly
broke right now! And my bike was recently stolen! <:^( )

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Here's that list, still looking to make any additions/corrections.

Subject: 13.16) What games run only on the 400 and 800 models?

Here they are!

Alley Cat Synapse
Apple Panic Broderbund
Aquatron Sierra On-Line
Astro Chase Parker Brothers
Atlantis Imagic
Attack at EP-CYG-4 (by Bram) Romox
Bandits
BearJam Chalkboard Inc.
Boulders And Bombs CBS
Chicken Synapse
Disk 50
Dreadnaught Factor, The Activision
Drelbs Synapse
Forbidden Forest Cosmi
Galahad And The Holy Grail APX
Go Hayden
Gorf Roklan
Jet Boot Jack English
Juggler IDSI
K-Razy Antiks K-Byte
K-razy Kritters CBS Software
K-razy Kritters K-Byte
Kangaroo Atari
KoalaPainter Koala
Leo's 'Lectric Paintbrush Chalkboard Inc.
Leo's Links Chalkboard Inc.
LogicMaster Chalkboard Inc.
Lunar Leeper
Mario Bros. ('83) Atari
MicroMaestro Chalkboard Inc.
Micro Illustrator Chalkboard Inc.

Monster Maze Epyx
M.U.L.E.(early release only)Electronic Arts
Nautilus Synapse
Picnic Paranoia Synapse
Pool 1.5 IDSI
Protector II
Rack 'Em Up Rocklan
Shamus Synapse
Slime Synapse
Snapper Silicon Valley Systems
Space Dungeon Atari
Squish 'Em Sirius
Story Machine
Zaxxon 16K DataSoft
Zaxxon 32K DataSoft

Yes, there are still a few of us programmers left around, I program on
it almost every day, including doing the programming for my IBM etc. on
it. It is so much better of a machine to program on than any other
platform I've found.

3092. Looking for 8-bitters in Mexico

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-04 00:00:00 UTC
From: frojas@telmex.net
Message-ID: <878660575.7581@dejanews.com>
Source record: 68884

Ok, to Bill Kendrik: Gem Drop! is great the only regret is the lack of sound anyway i like the game very much, i also play your rodent game and is better than the one i've played in the pc??.

Is there anyone in Mexico to talk about 8-bit Atari???, i know Mariano Dominguez, i can't think he's the only one left...

I have an Atari 130XE with the extended memory crippled, does anyone out there have a diagram from that????, i think some of the memory chips are lost, so my 130 has lot of marked pits without ic's in it.

So, i'm also an 8-bit programmer, altough i don't have so much time i'm trying to work in something new, i'm inspired by the great games the eastern europe programmers give us...

Does anyone knows where can i find the NTSC-PAL upgrade?????.

F. Javier Rojas
Greetings from Mexico.

3093. Atari 1040STf for trade

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-04 00:00:00 UTC
From: megcolard@aol.com
Message-ID: <19971104170501.MAA09078@ladder02.news.aol.com>
Source record: 68885

I have a 1040STf I would be interested in trading for 8bit periphials. I am looking for working disk drives, 850 interface, any eeprom programmer/copier for the atari if there are any out there, assemblers/monitors, etc. The 1040 also has a SM monitor both work great with slight case discoloration typical of their age.

Please mail this account or at kesava@vllyoak.resun.com for trade arrangements and offers. I tend to be fairly generous to the resonable.

3094. wanted:atari 8-bit modifications

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-04 00:00:00 UTC
From: classics@penny-empire.nospam.com
Message-ID: <345f28da.1990388@news.whc.net>
Source record: 68886

I'm looking for: Super Video article
The hack for hooking up the XEP80 via the parallel Bus

Thanks,
Chuck

3095. Re: ATR Disk Image > 130k ?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-04 00:00:00 UTC
From: kendrick@zippy.sonoma.edu
Message-ID: <63nrtupfb3@nuke.csu.net>
Source record: 68887

Spaten (spaten@earthlink.net) wrote:
: I've seen Yogi's ATR megaimages at 1meg, how is this done, can they be
: larger?

ATRs can be up to 16MBs, since modern Atari DOSes can support up
to that size (Hard Drive partitions, for example)

Your sectors get pretty big though! (1 byte file taking up lots of
space)

: I converted the files that came with COLRVIEW to RGB format but some of them
: came out in monochrome.Has anyone got the CVSquash software at umich to work
: corectly?

Yeah! I've never had a problem with it! What program are you using to
load them? CSView, right?

Cross-posted to: rec.games.video.classic,rec.games.vectex,rec.games.video.nintendo,comp.sys.atari.8bit,rec.games.video.misc,rec.games.video.marketplace

Don't Fear's Huge 3rd Auction Part 1 (update 9)

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds.
If you choose to send a personal check please allow 2-3 weeks for the
check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of
final bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to play can you spot the two classic
game collectors.
Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Source record: 68899

Like many die-hard Atarians, I now use my Atari with an SIO2PC and big SpartaDOS images loaded from the PC's hard disk, and like many other Atarians I get really annoyed at having to set the date and time every time I reboot.

R-Time 8 cartridges are getting very hard to find, but wouldn't it be possible to write a small executable to place in the SpartaDOS STARTUP file that used the SIO2PC facility to query the date/time from the PC?

This program must already exist somewhere!

Graham.

every european demos works on a european computer :-) .. and yes I think
so. Stefan Dorndorf found up here only one (really unknown) game, which
won't run with qmeg. It changes imho some os routines
own) game, that modifies the os. So qmeg won't work right. But that's not
a problem. I have installed a little switcher, which activates the
original atari os with his pretty useless self test ;-)

> :) And when you said "XL mode", do you mean it has the
> XL OS built into it to?

no, well at least not really. But it can change automatically to an very
compatible xl-mode which should run nearly all the old and newer 800XL
stuff. I know only 2 or 3 (bad) games which enable this mode, but work
perfectly.

...and yes, it's a 16k Eprom chip.

hey, it's cool to load the whole "Silent Service" disk into ram and play
it with no disk drive access ;-) faaaasst ;-)

> 3 times the speed of normal 1050s)

If your so upset about the 'bitching' why not register it instead of stealing
it? By your own posts youve used up your 30 day trial period about
50 times.

And as you've been told on many occasions, because a USD drive
spends most of its time seeking it never even gets to 2x, except on LONG
sustaned reads, on a specially formatted diskette, w/o much seeking or
non-sequential sector reads. (read: almost never).

> Remember that the PC-Mirror can't write at ANY speed!

Thats right, stealing has its penalities. I look forward to you bitching
about more free products in the future. Perhaps you could do some
more critical reviews of the free cpu emulators for us?

That's how it is in Mydos, and I think in Spartados too (256 byte sectors).
In Mydos you have the limit of 64 files per directory, so you end up with
a lot of subdirectories.

Sam,
Actually there is. It is a conversion of SIO2PC from Nick Kennedy, called
1050-2-pc. It requires a variation of the SIO2PC cable. It connects from the PC
serial port to only one floppy drive (only one SIO device can be used on this
cable). The software is a modified version SIO2PC to make the PC the controlling
unit instead of the Atari 8-bit computer controlling the PC. Nick specifies all of
the construction for the cable. Check
ftp://atari.archive.umich/atari/8bit/emulators .

There is a command already in APE to download the date and time, since one
of the earlier versions i believe. I never got around to writing the
program to set the spartados clock, so its gone unused.

If any of you feel like writing a small ML program, e-mail me and I
will give you the specifics.

3126. Atari Per. to serial ? cable

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-05 00:00:00 UTC
From: Brian Whitman <bwhitman@wpi.edu>
Message-ID: <Pine.OSF.3.96.971105231710.31038D-100000@wpi.WPI.EDU>
Source record: 68910

A long time ago I bought a cable that had the atari black plastic perhip. cable on one end and a rs-232 cable on the other. It was meant for hooking up a 1050 drive to my ST and transferring files for Xformer use or for downloading files and using them on my 130xe.

I am now using a Win95 system, and the 130xe is in the closet. Can I use that cable to somehow hook up my 130xe to my computer here and have my computer be its disk drive? My 1050 has long since bit the dust.

Thanks!

Brian Whitman

Well the GUI would be the CP ("Command Processor"),not the OS.

I HATED the ST's interface.The Amiga's was much better.And you could choose not
to load it.And Amiga's workbench let you pass lower-case filenames (or
whatever) to programmes.GEM translates all letters to upper-case.Really anoying
with ZOO or other programmes that take UNIX-like options.

Intuition has nothing to do with multi-tasking.That's the job of exec.
(="Executive Multitasker",the core of the Amiga OS)
You're thinking of Windows on the PC.
I never understood the point of having the CP multi-task the computer.

>One feature absolutely needed for any future GUI would be

SLIP and PPP would be device handlers,not part of the OS.
And from what I hear,SLIP would be hard enough to implement.Forget about PPP.

I got it off of ftp.hackerz.com.
You'll need to use double quotes around filenames with spaces in them.
I wish that Yogi would use simpler filenames.

Has anyone ever wondered why you hear SIO timing-out noises when you try to access a non-existent handler.If there's no handler than how does the Atari know what SIO ID# to access?
Is there a special ID# reserved for a device could could directly answer CIO requests?
(like a file server)

Unless they're stored in files I don't see how a Commodore game would use them.
The sector addressing is totally different.You'd have to use a conversion
programme.Remember that many Commodore games access the hardware directly where
all atari games must go through the disk drive OS.This means that Commodore
game disks can have different number of tracks and sectors-per-track where as
Atari drives numbers the sectors from 1 to the highest sector (usually 720).
There's no track or side numbers to deal with.Just a sinlge (16-bit) sector#.
You'd have to know where to put each sector in the DCM file.Also Commodore
uses bigger sectors.

>>of these games use non-standard disk-formats (eg. Mr. Robot

>one "right cartridge", a basic extension for the "standard" XL
>basic, to be used with "Atari Basic" as right cartridge.

To make this more clear,the left cartridge maps into the 40k mark and the right one to the 32k mark.Of course this applies to 8k (and 4k?) cartridges.
16k cartridges go into the left slot and take up both areas.
The Atari will only run (and init) a cartridge that's pluged into the corect slot.This makes copying 8k cartridges easy.You just put BASIC in the left slot and the game in the right and use a BASIC programme to copy it to a file.You'll also have to append run and init addresses and prepend a binary-file header.
(it's not like MS-DOS)

The R-Time8 cartridge can be used in either slot.

Atari disks can be used in a PC drive.But only the top side.The PC disk drive doesn't let you flip over the disk.Hence the addition of a up-side-down drive head;perhaps the most useless floppy drive enhancement ever made.

>The OS is the next stage after the HAL and will probably have a CLI
>and a GUI - I am opting for a shared library/devices scheme like
>AmigaDOS.

Actually AmigaDOS has nothing to do with libraries,besides being stored in one.
Exec handles the libraries.AmigaDOS just handles "handlers" like DOS
(the "filesystem handler") and CON:. (as opossed to exec's "devices")
Term programmes go straight to the OS instead of AmigaDOS's SER: handler.
I think that you meant "AmigaOS".

I never liked the arangment my self.Why would the "dos" library handle output
to the screen?
It's really more properly called the "UNIX" library since it organizes access
to the OS (which is VERY unlike UNIX) in a UNIX-like fashion.
(file handles,device handlers that take filenames (like DF0: and CON:))

Sam,

Actually
there is. It is a conversion of SIO2PC from Nick Kennedy, called 1050-2-pc.
It requires a variation of the SIO2PC cable. It connects from the PC serial
port to only one floppy drive (only one SIO device can be used on this
cable). The software is a modified version SIO2PC to make the PC the controlling
unit instead of the Atari 8-bit computer controlling the PC. Nick specifies
all of the construction for the cable. Check
ftp://atari.archive.umich/atari/8bit/emulators
..

>be on o-l-d media, I'm very interested in making a personal backup to play
>off of, but I understand that this game is copy protected. What is the
>best way to duplicate this disk?

Some people with the right equipment may be willing to copy it. That's
probably the best solution for a "onesie-twosie" type need. There is
also an "ATR to disk" program which will take a (usually 90K) ATR
image and copy it into a disk, though this will require at least a 1050
drive even for a single density disk because the ATR is slightly larger
than the 90K you can fit on a single density disk with or without any
DOS.

If you have a lot of copy protected disks you want to protect, an
investment in an 810 or 1050 with a Happy or Archiver chip may be the
best bet--they can be found for $30-75, depending on which model and
the profit motive of the seller...

Not to put too fine a point on it but it's the ST that has a BIOS,not the Atari.
I assume that you're talking about the Atari HCS ("Home Computer System")
becuase you mention the fabled SuperCartridge page,$D5.
(which is what XON.COM for SDX accesses to switch the cartridge back in)

If the programme did call device handler routines directly,then it wouldn't
work with your upgrade nor any other RAM screen handler.It would also not work
on all versions of the Atari since the handler routines move from version to
version.Better to go through the OS (CIO).

The same goes for the PC.Programmes that access BIOS screen routines defeat
the purpose of loading super fast ANSI (CON:) drivers.
Then again ANSI does suck.
(you can't use multiple video buffers or read the contents of the screen or
use different character sets,like you can on the Atari)
Still it's anoying to try to unzip a file on a BBS and just get a bunch of
blank lines.(PKUNZIP uses the "ANSI interupt" rather than the OS)
ANSIPLUS does give you a lot more features than Microsoft's pathetic ANSI
driver.
(ANSIPLUS is the only ANSI driver I've used that doesn't depend on your
video BIOS.IT also takes advantage of 32-bit CPUs)
The BIOS is just nightmarishly slow on the PC.Especially if you can't shadow it
to RAM.Just set Telix to "BIOS screen writes" and press ALT-Z to look at the
help screen to see what I mean!
(why doesn't Telix store the help screen in a different video buffer?)

Of course just start up Linux to see a VT102 emulator (Linux's version of ANSI)
that runs incredibly fast.(remember that "less" uses ANSI/VT codes and it's as
fast as MS-DOS programmes that access video memory directly)

>> ////Pakrat

Well if you're using artefacting (320x200) mode just use black on white instead
of white on black and it'll be useless on XL-IT since XL-IT always sets the
foreground brightness to the brightest(15) and leaves the background where it
is.This makes StarFleet nearly un-playable.
(of course the user could always switch to non-artefacting mode)

>Bill,
>Is that really nice!? I use both and am glad I can. The 130XE,MI/O,

>thanks to those who responded...my next logical question of course,
>where can I get the afforementioned driver software...anybody
>willing to send me a copy for the cost of disk(s) & postage?

Well the software only works with programmes that use the OS (CIO) to print
text to the screen.And it's slow.
(and BASIC defeats burst mode so it's even slower with it)

Since BobTerm accesses the screen directly,it comes with it's own version of
the XEP-80 driver.So if you just want to calls BBSs you can use that.
(only with BobTerm)

13.4) What are the pinouts for the...?
13.5) What BBS software can be used on the Atari?
13.6) What versions of Atari BASIC or the CTIA/GTIA chip do I have?
13.7) Which versions of the Operating System (OS) are there?
13.8) What games support 4 simultaneous players on the 400/800?
13.9) Why should I disconnect the 810/1050 power supply before connecting or disconnecting SIO cables?
13.10) What is Omnimon?
13.11) What is the difference between NTSC and PAL machines?
13.12) Is the software for the Atari 8-bit computers "TV-standard dependent?"
13.13) What programming languages are available for the Atari?
13.14) What is the Atari XEP80 Interface Module?
13.15) What makes some XL/XE software incompatible with the 400/800?
13.16) What games run only on the 400 and 800 models?

Other FAQ Lists for the 8-bit Atari
14.1) What vendors, developers, or publishers support the 8-bit Atari?
14.2) Where is my nearest 8-bit Atari BBS?
14.3) Where is my nearest 8-bit Atari user group?
14.4) I'm new to the Atari. How do I use this thing?
14.5) Can I use an emulator to run my old Atari software on my new computer?
14.6) What hardware upgrades, modifications and add-ons are available?
14.7) What is the HARD-Interlacing-Picture (HIP) format?
14.8) How do I access Usenet, FTP, Gopher, and WWW by e-mail?

Reader-suggested topics, unwritten as yet: (volunteers?!)
How fast of a modem can my Atari display keep up with?
-with Ultraspeed roms?
-with XEP-80

-with any particular terminal program

Video Upgrades
-Adding chroma\lumi to 800XL

How can I make my commercial boot disk (cart)
into a load file or disk image?

What is APE?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE 800XE XE Game System

Here is a very condensed history of Atari, centered around their 8-bit
computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27.
Atari created the first coin-operated arcade video game with the introduction
of Pong. The video game industry was launched and has shaped pop culture ever
since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), giving birth to home
video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using
the 6502 microprocessor. The Atari 800 was code-named "Colleen"; the 400,
"Candy."

The following are most of the team who originally designed the 400/800.
Credit for providing this information for the FAQ goes to:
Doug Neubauer (by way of James Finnegan, mailto:finneganj@delphi.com)
Jerry Jessop, mailto:jjessop@ix3.ix.netcom.com
Scott Emmons, mailto:scotte@center.uscs.com

VLSI HARDWARE:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators - Partner in "Cyan Engineering"
Lawrence D. Emmons - Also one of the creators - Partner in "Cyan Engineering"
Joe Decuir - ANTIC and system and creator
???A French guy - ANTIC logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - POKEY logic design
Mark Shieu - POKEY chip design
Steve Stone - POKEY layout design
Steve Smith - Technician for ANTIC and GTIA

Delwin Pearson - Technician for POKEY

OS PROGRAMMERS:
Larry Kaplan
David Crane
Bob Whitehead
Al Miller

1979
The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop, mailto:jjessop1@home.com writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirment had been meet.

The first "real" consumer units were shipped in Nov. of 79 and were 400's to Sears followed very shortly by 800's."

These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 128 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24 text resolution in 8 graphics modes and 6 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

1981
November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop, mailto:jjessop1@home.com adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics

demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface (PBI), providing direct memory access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

1984
Warner Communications sells Consumer Electronics and Home Computer divisions of Atari Inc. to Tramiel Technologies on Monday, July 2.

Atari Corporation is formed by Tramiel Technologies and its products marketed under the Atari brand.

(Atari Games Corporation is also formed from the former coin-op division and markets coin-op games under the Atari Games brand.

Today Atari Games is an indirect, wholly-owned subsidiary of the Midway Games division of WMS Industries.

WMS Industries Inc.
3401 N California Ave
Chicago IL 60618-5899
USA
http://www.wms.com/

Midway Games Inc. (a division of WMS)
http://www.midway.com/

Atari Games Corporation (a subsidiary of Midway Games)
http://www.atarigames.com/)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus the FREDDY chip, supporting the unique (but rarely used) ability for the 6502C and the ANTIC to independently access RAM banks. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface (ECI), continuing the powerful feature of direct memory access.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

The 800XE, a 130XE with just 64K, was released at some point in eastern Europe. [WHEN???]

1992
Atari officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

1996
On July 31, 1996, Atari Corp. became a JTS Corp. subsidiary.
JTS Corporation, with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer market. JTS offers an innovative line of ultra-slim 3.0-inch disk drives that provide higher capacity and lower cost per megabyte than competitive alternatives in the portable computer market. The president and chief executive officer of JTS, Tom Mitchell, was formerly the president and chief operating officer of Conner Peripherals and co-founder, president and chief operating officer of Seagate Technology.

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer,

ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer...

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product. The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his/her computer platform was developed years before the IBM PC or Apple Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a popular alternative in today's home computer marketplace.

Subject: 1.3) What are the some of the performance features of the 8-bit Atari?

Some of this text by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick).

CLOCK SPEED:
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

SCREEN REFRESH RATE:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines

ANTIC AND THE DISPLAY LIST:
ANTIC CIO/BASIC Display Resolution Number of
Mode # Graphics # Type (full screen) Colors
---
2 0 Char 40 x 24 1 *
3 - Char 40 x 19 1 *
4 12 ++ Char 40 x 24 5
5 13 ++ Char 40 x 12 5
6 1 Char 20 x 24 5
7 2 Char 20 x 12 5
8 3 Map 40 x 24 4
9 4 Map 80 x 48 2
A 5 Map 80 x 48 4
B 6 Map 160 x 96 2
C 14 ++ Map 160 x 192 2
D 7 Map 160 x 96 4
E 15 ++ Map 160 x 192 4
F 8 Map 320 x 192 1 *
F 9 + Map 80 x 192 1 **
F 10 + Map 80 x 192 9
F 11 + Map 80 x 192 16 ***
* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16
luminances x 16 hues = 256 colors. (Four registers are for player-missile
graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse video
incarnation, are totally redefinable.

PLAYER-MISSLE GRAPHICS:
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display

List - a program which is executed by the ANTIC graphics chip every
screen refresh:

All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

Subject: 1.4) What is the internal layout of the 8-bit Atari?

The following text was written by Chris Crawford and appears in De Re
Atari (Atari#APX-90008), a book published and copyright by Atari, Inc.,
1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different
from other systems. It of course has a microprocessor (a 6502), RAM,
ROM, and a (PIA). However, it also has three special-purpose (LSI) chips
known as ANTIC, GTIA, and POKEY. These chips were designed by Atari
engineers primarily to take much of the burden of housekeeping off of the
6502, thereby freeing the 6502 to concentrate on computations. While
they were at it, they designed a great deal of power into these chips.
Each of these chips is almost as big (in terms of silicon area) as a
6502, so the three of them together provide a tremendous amount of
power. Mastering the Atari 8-bit computers is primarily a matter of
mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor
dedicated to the television display. It is a true microprocessor; it has an
instruction set, a program (called the display list), and data. The display
list and the display data are written into RAM by the 6502. ANTIC retrieves
this information from RAM using direct memory access (DMA). It processes the
higher level instructions in the display list and translates these instructions
into a real-time stream of simple instructions to GTIA.

CTIA ("Color Television Interface Adapter") / GTIA ("George's Television
Interface Adapter") is a television interface chip. ANTIC directly controls
most of GTIA's operations, but the 6502 can be programmed to intercede and

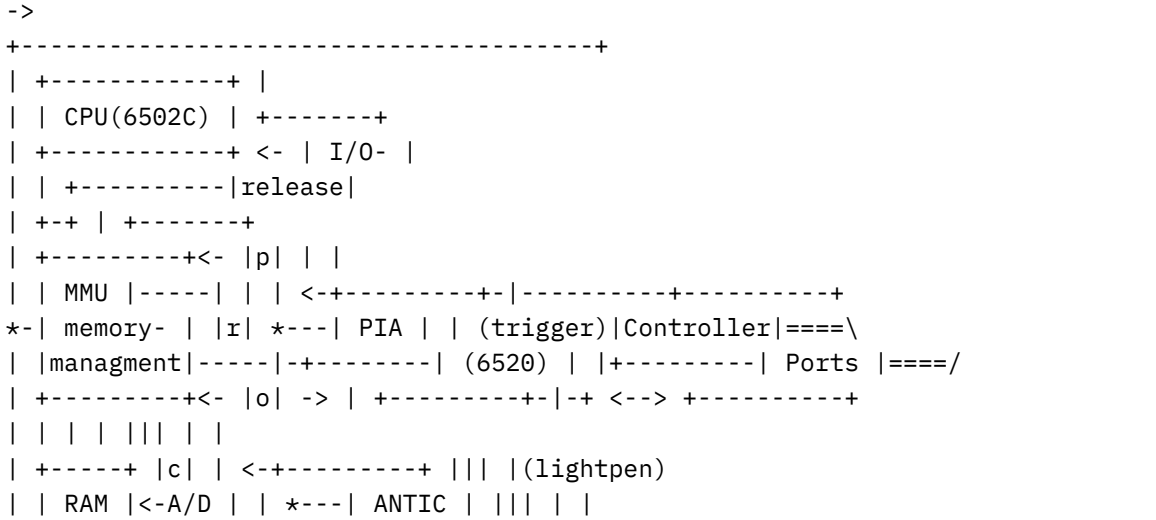
control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

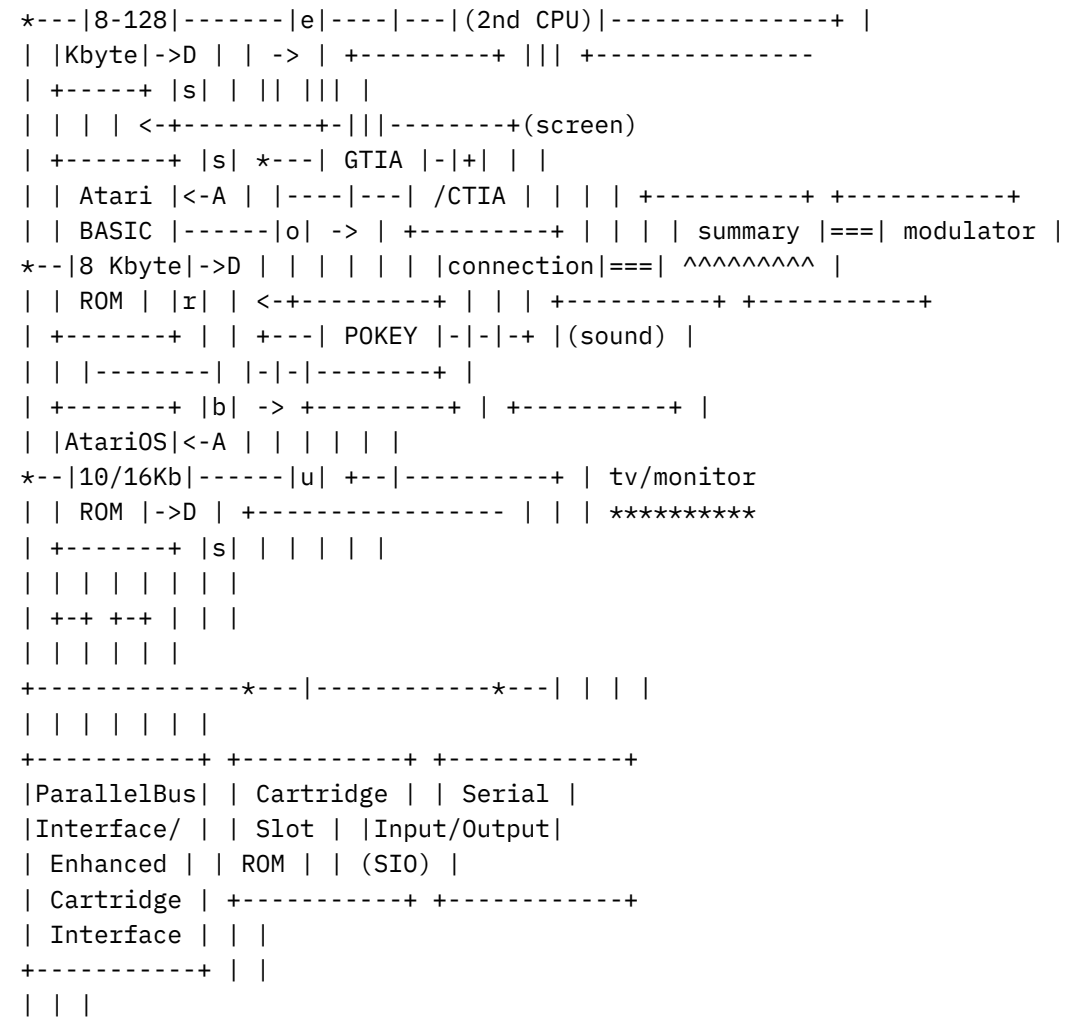
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDY, a RAM address multiplexer. According to mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "FREDDY is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. FREDDY also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a FREDDY but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from FREDDY, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to FREDDY for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say FREDDY does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO FREDDY) and an extra 8 RAM chips."

Hardware Arrangement (With thanks to mailto:peter@soemtron.sb.sub.de (Peter))





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800:8/16/48K,1200XL/800XL/65XE/800XE/XEGS:64K,600XL:16K,130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

Subject: 2.1) What is comp.sys.atari.8bit?

news:comp.sys.atari.8bit is the unmoderated Usenet newsgroup for discussion about the Atari 8-bit family of computers, including the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE and the XE Game System!

comp.sys.atari.8bit was born around 1986 when the earlier comp.sys.atari newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st.

Large binary posts do not belong in unmoderated discussion groups like comp.sys.atari.8bit. If you wish to share PD/freeware/shareware, use alt.binaries.atari and alt.binaries.atari.d or upload the software to the University of Michigan Atari Archive.

To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

Subject: 2.2) What other Usenet newsgroups cover the 8-bit Atari?

news:comp.sys.atari.advocacy
Opinionated discussions about Atari computers. Unmoderated.

news:comp.sys.atari.announce
Announcements related to Atari computers. Dead newsgroup?
Moderated by Yat Siu, mailto:lexicor@world.std.com

news:comp.sys.atari.programmer
Programming Atari computers. Unmoderated.

news:rec.games.video.classic
Orphan home video game systems. Unmoderated.

news:comp.emulators.misc
Emulating one kind of computer on another. Unmoderated.

news:comp.emulators.announce
Announcements related to computer emulators.
Moderated by Qualcomm, mailto:emulators-request@qualcomm.com

news:alt.binaries.atari
uuencoded software for Atari computers. Unmoderated.

news:alt.binaries.atari.d
Descriptions/discussions on software posted on alt.binaries.atari. Unmoderated.

news:alt.binaries.comp.atari8bit
uuencoded software just for the 8-bit Atari. Not widely available.

Subject: 3.1) What is INFO-ATARI8?

INFO-ATARI8 is an e-mail list for discussion about the Atari 8-bit family of computers.

To subscribe to INFO-ATARI8, send a message to:
mailto:listserv@vm.marist.edu
that says:
subscribe info-atari8

Owner= HARRY@MARIST (A Harry Williams)

INFO-ATARI8 was created on December 9, 1986.

Subject: 3.2) What is the Classic Computers List?

The Classic Computers List is a discussion list for people who collect/preserve/restore old computers of any kind. If you would like more info you can find it at http://weber.u.washington.edu/~bcw/ccl.html .

If you don't have access to the web, then send an e-mail to mailto:bill@booster.u.washington.edu (Bill Whitson, ClassicCmp ListOp).

On the web site you'll find information on how to subscribe in addition to the two ClassicCmp FAQs. If you decide to subscribe, please read all three documents first.

Subject: 3.3) What is ATARIPL?

From: Wojciech Hartman <harti@waw.pdi.net>
Date: Saturday, March 15, 1997 3:51 AM

I am proud to announce that there is a mailing list "ataripl" for all polish-speaking Atari users and enthusiasts.

To subscribe the lists you have to send an email to mailto:majordomo@piwo.bl.pg.gda.pl containing a line "subscribe ataripl".

Subject: 3.4) What is ATARI8-L?

atari8-l mailing list

created especially for discussion about ANIX project (unix for atari8), but any atari 8bit related threads are welcome. english language only.

to subscribe, please mail a message to mailto:majordomo@zwieracz.psych.uw.edu.pl

containing a line:

subscribe atari8-l <mailing address you'd like to receive the list to>

in the body (not the subject) of your message

there is also mail2news gateway that translates all postings on the list to easy to read usenet articles, available read-only to everyone at: news://zwieracz.psych.uw.edu.pl/listserv.atari8-l

if you get any problems, please report to mailto:krap@zwieracz.psych.uw.edu.pl.

Subject: 3.5) What is ATARI8-PL?

Slaves (mailto:nic0@calia.daewoo.lublin.pl) writes:

I've got an excellent news for you - there's a new discussion list, ONLY about atari 8bit scene news, uploads on Taquart site, and so on. All in all, to make the first PL-ENG list about atari8. The creator and moderator of this list is Slaves (me). If you want to subscribe there, mail:

mailto:listserv@xenon.reset-pc.lublin.pl
subscribe atari8-pl

Subject: 4.0) What is XL Search?

XL Search is a new and growing search engine created and maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick), designed to provide much-improved access to the various PD/freeware/shareware Atari 8-bit software archives available on the Internet.

XL Search is located at: http://zippy.sonoma.edu/kendrick/nbs/xlsearch/

You can also access XL Search via e-mail! Send mail to:
mailto:kendrick@zippy.sonoma.edu with the subject "xlsearch" for details.

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of files for many computing platforms, including the Atari 8-bit computers. For more information:

Bill Kendrick, mailto:kendrick@zippy.sonoma.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich Archive. The Archivists request you use these mechanisms in this order of preference:

1) The number one way to get into the UMich archives is via AFS. If you have AFS, all our files are kept in the directory "/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT! Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

Mirror web sites:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
http://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file and mail it to mailto:kendrick@zippy.sonoma.edu
(Bill Kendrick).

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no
(Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software
Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate
directory. Please include a readme file with each upload, so people know
what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

A mirror of Kevin Atkinson;s ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari
8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The
Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only)
on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 4.7) What is the Slovakian Archive?

This FTP site contains some demos, games, utils, zines from all the world.
Here you can also find some Slovak or Czech stuff.

Contact: mailto:mchorvat@econ.umb.sk (Marco, of GMG)

ftp://svs.scsss.sk/pub/atari/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

Internet access to the Cleveland Free-Net (Cleveland, Ohio, USA):

telnet://freenet-in-a.cwru.edu or
telnet://freenet-in-b.cwru.edu or
telnet://freenet-in-c.cwru.edu

Type "go atari" at any menu.

Contact:
mailto:xx004@cleveland.freenet.edu (Atari SIG)

The Cleveland Free-Net now has a home page:
http://cnswww.cns.cwru.edu/net/easy/fn/

Subject: 5.2) What is the National Capital FreeNet Atari Users SIG?

Internet access to the National Capital FreeNet (Ottawa, Ontario, Canada):

telnet://telnet.ncf.carleton.ca (Type "go atari" at any menu) or
gopher://gopher.ncf.carleton.ca or
http://www.ncf.carleton.ca/

Contact:
mailto:ac382@freenet.carleton.ca (Jack Kitowicz) or
mailto:aa728@freenet.carleton.ca (Blair Dea)

Subject: 5.3) What is the Victoria Telecommunity Network Atari Users SIG?

Internet access to the Victoria Telecommunity Network (Victoria, British
Columbia, Canada):

telnet://freenet.victoria.bc.ca (Type "go atari" at any menu)

Contact:
mailto:ua558@freenet.victoria.bc.ca (Gordon Hooper) or
mailto:ud264@freenet.victoria.bc.ca (Ted Skrecky)

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #rgvc - Classic Games and Systems Collectors. "Rec.Games.Video.Classic"

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of

the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:76702.1076@compuserve.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load
files. Like .xmo, use of .bin is discouraged.

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit

Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T XE v. 2.72 (128K) or Ice-T 1.1 (48K) by Itay Chamiel
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz, mailto:draco@mi.com.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,

and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo, mailto:ssilicon@lax.net sums it up this way:
So a basic rule of themb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the
backwards compatible 360KB modes that most 1.2MB drives offer.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 11.5), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software Services (see the companion vendor/developer list), allows both low density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard floppy drives to be used on the Atari. A utility is included to read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need

a Multi I/O or Black Box, which use the PBI (parallel bus),
then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C
port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o
25 14

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 11.5) What is SIO2PC?

Original text by Dave Paterson, mailto:davepat@total.net

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC
printer or to a file on the PC. High speed drives are emulated (a la US
Doubler).

All these functions are transparent at the Atari end; you never notice the
difference between SIO2PC and regular drives, except that the SIO2PC drives
are faster than any others (except Ramdisks and PBI interface drives).

Several different designs for the SIO2PC hardware are floating around. Best
contact the author for the latest details.

SIO2PC 4.13 is shareware by Nick Kennedy, mailto:nkennedy@cswnet.com

---

Subject: 11.6) How can I convert my commercial boot tape into a cassette image file?

mailto:ernest@pi.net (Ernest R. Schreurs) writes:

For those of you that like ALL classic Atari software, there is now a way to store all software that has been recorded on cassette tapes on the hard disk of your PC. I have written a program that is similar to the SIO2PC utility written by Nick Kennedy. But this one is intended for use with cassette software. You will need the following items:

Any PC equipped with a sound card and about 50 to 100 Megs of free disk space to work with. The sound card should be able to sample sound at a sample rate of 44.100 Hz mono. The sample must be recorded into a .wav file.
You need the wav2cas program to convert the .wav file to a .cas file. The .cas file is a digital cassette image file that only contains the data that is on the cassette tape. Once you have that, you can throw away the .wav file. The .cas files are typically 16 to 64K, so they are relatively small.

To load cassette files into your Atari (i.e. boot a digital cassette image) you do not need a sound card. You do need a SIO2PC cable or similar device. You also need the cas2sio program.

The wav2cas and cas2sio programs should be available from the archives of Umich by now. They have been put together in one zip file wav2cas.zip, along with the documentation and the 'C' source code.
You can download it through the web interface at the URL
http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/wav2cas.zip
Note the capital in Emulators and in Peripherals.
Thanks to William Kendrick for helping me get it uploaded there!
You can also try the gopher stuff:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Peripherals/

Steven Tucker, the author of APE, has added support for this file format as of version 1.15 of APE. It looks real neat, so try that out too! Thanks to Steven for adding a nice user interface for these cassette images. He did a nice job. I am hoping other using are willing to write some programs to get more enjoyment out of this underrated storage medium.

My stuff is available totally free for personal use, so I hope you enjoy it. Read the docs about the conditions.

Keep those XL's/XE's humming.
If you have any questions feel free to E-mail me: mailto:ernest@pi.net

---

Subject: 12.1) What 5.25" floppy disk drives are available?

==> Indus GT
SS SD/ED/DD Synchromesh mode usable with SpartaDOS X and
DOSXL only.

==> Astra Double-D?
SS/DS SD/DD? standard /LEDs and such

==> Rana 1000
SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:

- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 67000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2001
SS SD/ED/DD 19200 bps or 38400 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB

= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades (CSS)
- Floppy Board (CSS)
- Percom drive upgrades

==> Atari XF351 or XC35
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need to obtain one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Rare.
Fast but still relatively slow I/O, kludge through joystick ports for 800.

==> KPI Hard Disk Drive Interface (formerly Supra)
from K-Products (bobkla19@mail.tcd.net - Bob Klaas)
Some limitations on drive type and size and total number of drives in sys.

==> Multi I/O (MIO) (formerly from ICD)
from Fine Tooned Engineering (FTe) (ftooned@crl.com - Mike Hohman)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Black Box
from Computer Software Services (CSS) (76702.1076@compuserve.com - Bob Puff)
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface
from Konrad M. Kokoszkiewicz and Jacek Zuk
(see http://www.orient.uw.edu.pl/~conradus/docs/ide_eng.html)
o Maximum drive capacity: 16777215 physical blocks on each device.
o Maximum number of partitions: 16
o Maximum capacity of a partition: 16777215 logical sectors
o Logical sector length: 256 or 512 bytes
o Average speed (in kilobytes per second, WDC 130AB drive):
- Native mode, sequence of sectors (R): 75
- Emulation mode, sequence of sectors (R): 43
- Emulation mode, back sequence (R): 28
- Emulation mode, random sectors (R): 13
- Emulation mode, same sector (R): 29
- Emulation mode, DOS file (W): 7
- Emulation mode, DOS file (R): 36
o Booting from any partition (on the standard XL OS)
o Write protection capability
o 8 jumpers to set the device number for the operating system
o Sweet 16 compatibility

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

==> MSC IDE-Harddisk-Controller
created by Steve Birmanns and Matthias Belitz in Germany
mailto:stefan_birmanns@ac.cybercity.de
mailto:matz@kawo2.rwth-aachen.de
http://www.kawo2.rwth-aachen.de/~matz/atari/
* real device for the parallel-port of the Atari XL-Series
* up to 240 partitions per harddisk supported
* emulates D1: until D9: of disk devices (access to 9 partitions at

one time)
* full bootable from any partition (with standard XL-OS)
* write protectition capability
* supports master/slave configuration
* more than 30 KB/s file access with SPARTA-DOS 3.2 gx (reading)
* more than 10 KB/s file access with SPARTA-DOS 3.2 gx (writing)
* access of ATAPI-CDROM with additional software

Subject: 12.4) What kinds of monitors can I use with my Atari?

In general, you either need a Composite Video monitor, or a standard TV.

Television:
You'll need a video cable (not detachable on the 400/800), and a TV Switch Box. Used with VHF Channel 2 or 3.

Monitor:
The 8-bit Atari produces a color Composite Video signal, plus separate chroma (color) and luminance (brightness) signals which the best composite video monitors can take advantage of. Popular examples of such monitors include the Commodore 1702 and 1804 (and many others).

The pinout of the Monitor port is in the pinout section of this FAQ list.

Gotcha's:

-the 400 and North American 600XL lack a monitor port entirely. They can only be used with a TV.

-the 800XL lacks separate chroma/lumi (can be added via hardware modification)

-the XE Game System provides an RCA-style jack in place of the Monitor port; so it provides Composite Video but lacks separate chroma\lumi signals

-the XEP80 Interface Module produces a monochrome Composite Video signal via an RCA-style jack. This higher-resolution signal produces crisp, clear 80 column text on 80-column monochrome composite video monitors.

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

"The best monitor for an Atari 8 bit that is readily available today would be a television with an S-video input---these tend to be large and high-quality, so the s-video input is the deciding factor there. You'll have to build the cable yourself, and if you have an XL you'll want to do the Super Video upgrade that Ben Poehland published in Atari Classics a few years ago---this puts the chroma signal back on the pin that it should be and cleans up the video signal enormously. It's really more of a fix than an upgrade.

I use a commodore split-video monitor. They work great and are cheap-to-reasonable when you can find them."

Jerry Jessop, mailto:jjessop1@home.com explains why French Ataris produce fewer colors:

"I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the expense. The largest SECAM market is not France but the Soviet Union (former) and in 80-84 sales of these items there were not possible."

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/developer list). SpartaDOS 3.3a and 3.3b were rewritten by Stephen J. Carden for use with BBS Express PRO!.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Home Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Home Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs

600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missile Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions. 410a - Taiwan
version
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 40-Column Printer -
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige &
black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software. 2 SIO ports
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, w/ XE Term software. Permanent SIO cable

XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
800D (Developers Bus System)
600 600XL, all black case
1000 Sweet 16 Project, lower end model. Became the 1200XL
1000-X Sweet 16 Project, higher end model. Became the 1200XL
1200 1200XL internally, many slight cosmetic differences
1200XLS 1200XL Show prototype, top-mounted cartridge slot
800XLF late 800XL with a redesigned motherboard, plus the FREDDY chip
1250XLD Earlier name for the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL 1400XL plus room for 2 internal 5.25" floppy drives
1450XLD 1400XL plus 5.25" floppy drive
1600XL Amiga/Amiga-like????
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE/AMY sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1060 CP/M Add-On Module -Z-80 CPU, 64K RAM, CP/M 2.2 OS, 80 column display
1090 XL Expansion System-5 PBI slots, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XF351 -a 3.5" drive.
XC35 -an XF551 with a 3.5" mechanism
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

Thanks to Matthias Belitz, mailto:matz@kawo2.rwth-aachen.de for the European data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have.

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

N O R T H A M E R I C A: INPUT = 115-120 V AC, 50/60Hz
==========
9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:

Subject: 13.5) What BBS software can be used on the Atari?

This section mostly by mailto:winston@merk.com (Winston Smith)

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which

it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

o Carina BBS -- a product of Shadow Software. See Vendor list to contact.

o BBS Express! Professional -- a product of K-Products. See Vendor List.

o OASIS IV -- a product of ???

o Forem-XE Pro -- by Len Spencer. http://members.aol.com/lenspencer/

Subject: 13.6) What versions of Atari BASIC or the CTIA/GTIA chip do I have?

Atari BASIC:

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Freddy Offenga, mailto:offen300@hio.tem.nhl.nl adds:

there's another good answer (IMO):

You can also take a look at the part numbers on the IC's
inside your Atari and compare them with the numbers from
the following table:

Part# Version
~~~~~~~~~~~~~~~~~~~~ ~~~~~~~~
CO12402 + CO14502 A
CO60302A B
CO24947A C

CTIA or GTIA installed?

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

~~~~~~~~~~~~~~~~~~~~

Subject: 13.7) Which versions of the Operating System (OS) are there?

This section written by Freddy Offenga, mailto:offen300@hio.tem.nhl.nl

The following Operating Systems exist for the Atari 8-bit:

Rev.	System(s)	Models	Size	Part Nr(s)
A	NTSC	400/800	10kB	CO12499B, CO14599B, 12399B (*)
A	PAL	400/800	10kB	CO15199, CO15299, CO12399B
B	NTSC	400/800	10kB	(?)
B	PAL	400/800	10kB	(?) (*)
1 A	NTSC/PAL	1200XL	16kB	CO60616A, CO60617A
1 B	NTSC/PAL	1200XL	16kB	CO60616B, CO60617B (?) (*)
1	NTSC/PAL	600XL	16kB	CO62024
2	NTSC/PAL	XL/XE	16kB	CO61598B
3	NTSC/PAL	XE	16kB	C300717
4	NTSC/PAL	XEGS	16kB	C101687

(?) more information or confirmation required

(*) these versions should exist, although I've not seen them.
If you have one (or more?) of these, please contact me.

NOTE:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

The following games support 4 player head-to-head play. Remember, only the 400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Breakout, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor.

Thanks to mailto:jlodoen@shell.portal.com (Jeff M Lodoen) for initial info.

Subject: 13.9) Why should I disconnect the 810/1050 power supply before connecting or disconnecting SIO cables?

Rich Mier writes:

You've been plugging and unplugging the SIO cable with the 1050 power pack plugged in, right? That's a no-no. Most of the time it's Okay, but about 1 in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right, rear of the main board. A 14 pin DIL chip. Actually it is an array of 5 transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be ON on the CPU. The problem has to do with the secondary winding of the Power Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

Subject: 13.10) What is Omnimon?

--This section was written by Scott Charles, mailto:scharles@blast.net

Omnimon is a add in board for the Atari 400/800 series of computers and a replacement OS chip for the xl/xe series of computers. The original Omnimon board fit onto the OS board in the 800 series and had a switch attached to it to disable the board. The 400 series required you to bend the circuit board into a right angle for it to fit inside the 400's case. (It was designed to do this.). The Xl/Xe version replaces the OS Rom chip inside the computer with one that contains the Omnimon code, and a revised OS to make the XL more compatible (no translator disks needed).

Omnimon itself is a machine language monitor residing from $C000-$CFFF, with a few variations. It was designed in 1981 by David C. Young (who also wrote Cartcopy, a copier for the right slot of the 800) of CDY Consulting in Texas. The first software revision of Omnimon had a few basic commands and was only 4K long, only for the 400/800. The second revision required the addition of a bank select switch, and was 8K long. Since it was addressed by the 400/800 as 4K, when you needed to use the code in the other bank, all the text on the screen flips upside down, you flip the switch and hit any key. The Xl and Xe versions of Omnimon do their bank selecting through the normal XL port for this function, so it is seamless.

So what can you use Omnimon for? Its main claim to fame is its ability to interupt any running program by pressing and holding the SELECT-OPTION-RESET keys. Depending on the sequence you press determines what kind of warm boot the Atari does. SELECT+RESET does NO warm boot, preserving the stack and flag values of the 6502. OPTION+RESET allows a warm boot (as if you had just pressed RESET) and interupts the vector at $C (initialation vector).

I think you can see where we are going with this - Omnimon was developed as a machine language developer's tool, much in the same way that the Happy modification was developed for legitimate backups. I.E. far more people use both products for software piracy. If you have an Omnimon! in your machine and you try to boot up an Electronic Arts program, for example, you will get a message that says "REMOVE ROM AT $C000", and the program hangs. (Hence,the need for the disable switch on the 400/800 version. There is no way to disable the xl/xe version, just switch it to an alternative OS.) The 400/800 version, since the disable switch just deselects the mapping of Omnimon to $c000 area, can be switched on and off at will.

I myself did not know what Omnimon was used for until I was using a sector editor on a program called Pharaoh's Pyramid, from Master Control Software. On it is a sector that reads, "REMOVE OMNIMON YOU DIRTY PIRATE". This got me to thinking, what does that mean? After about 5 months of playing around

with the Omnimon board, I figured out how to use it to pirate software.
In fact, it can be used to make most boot disks into binary files, and remove
copy protection from countless more.

At the risk of sounding melodramatic, I can safely say that Omnimon hastened
the demise of the Atari 8 bit computer by 2-3 years, because of its power.

Subject: 13.11) What is the difference between NTSC and PAL machines?

Software written for NTSC (North America) will always work on PAL machines,
but software designed on PAL machines (Europe) won't necessarily work on
NTSC machines.

Wayne Booth, mailto:trek@ihgp15.ih.att.com writes:

The differences with PAL and NTSC have to do with the number of lines
displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they
refresh the screen 50 times a second doing 1/2 the lines each refresh
so they effectively repaint the screen 25 times a second. NTSC is
525 lines/screen with a 60 times a second refresh - again only half
the lines each refresh so a 30 times a second frame rate. This
would change the amount of time available during vertical sync pulse,
and the number of lines that need to be redrawn each time.

Subject: 13.12) Is the software for the Atari 8-bit computers "TV-standard
dependent?"

{some PAL demos flicker, or won't run at all on NTSC machines}

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

This is because PAL machines have a vertical refresh frequency of 50hz
(NTSC use 60hz) which translates into more vertical blanking time for
demos and other computation-intensive graphics software. So PAL demos
that won't work on NTSC machines are usually returning from a VBI
(vertical blanking interrupt) too late. Some also attempt to use more
vertical resolution ("longer" display lists) than an NTSC display can
handle.

mailto:thor@math.tu-berlin.de (Thomas Richter) adds:

Yes, it is. Mostly because the frequency of the vertical blank interrupt
is different (60Hz for NTSC, 50Hz for PAL). The old OS A was not clever enough
to notice the difference, so all system timings like the keyboard auto-repeat
function depend on the TV system. These parts of the OS have been corrected
with OSB and the XL versions of the OS. However, as most games install a
VBI, their timing does still depend on the frequency -> they will run
slightly slower for PAL versions.

Another point is that the popular pseudo-colors used in the Antic-F
(Graphics 8) mode are not colorful at all when displayed on a PAL TV, because
of differences in the color encoding for the TV. The schematics of
the Xl computers include however a hack how to change the PAL version to
the NTSC version (the PAL versions include two crystals, one with 5/4th of
the frequency of the other. One is used for the system clock, the other for
the color clock), but I never dared to apply it.

Subject: 13.13) What programming languages are available for the Atari?

Revision : 1.0
Date.... : 4/20/1997

==========
!!!! This section is under construction - HELP WANTED !!!!

The goal is to give information about all available languages
for the Atari 8-bit computer. This information will include;
title, last version, author, date and a short description.
It would also be nice to know how to get it and where to get
more information (like reference cards, reviews and such).

Some resources:
- The Multi-lingual Atari, Analog magazine 45, August 1986
- Assembler Interchange Format, Project description
Version 2.2, 2-2-1997, Freddy Offenga

If you like to help or if you've something to add already,
just contact me. There's still a lot work to be done....
Freddy Offenga, email-to: offen300@hio.tem.nhl.nl
==========
There are quite a lot! To get some structure in this section it's
divided into the following catagories;
a) ASSEMBLER
b) BASIC
c) C
d) PASCAL
e) LISP
f) FORTH
g) PILOT
h) LOGO
i) All the rest

[D] = available on disk
[C] = available on cartridge

a) ASSEMBLER
- 130XE+ Makro Assembler v2.2, 1992 (Torsten Karwoth) [D]
Two pass 6502 assembler/editor. Supports extra RAM.
Highly compatible with Atmas II.
- Alfasm, Version 1.0, 1990 (Jeff Williams) [D]
Supports 65816 instructions (for the Turbo-816 upgrade

from DataQue Software). This assember is also known as
the Turbo-Assembler/16.
- Atari Assembler/Editor, 1981 (Atari) [C]
Two pass 6502 assembler/editor.
- Atari Macro Assembler, 1981 (Atari) [D]
Two pass 6502 assembler/editor.
- Atmas II Makroassembler, 1985 (Peter Finzel, Hofacker) [D]
Macro assembler with integrated editor and monitor.
- Bibo Assembler, 1986 (Compy-shop) [D]
- Datasm/65 assembler, Version 2.0, 1981 (DataSoft) [D]
Two-pass 6502 assembler.
- EASMD, Version 1.0, 1981 (OSS) [D]
- MAC/65 Macro Assembler, 1982 (OSS) [D/C]
Two pass macro assembler/editor.
- MAE, 1996 [D]
Supports 6502 and 65816 mnemonics.
- Nasm65 assembler, 1992 (Nat!) [D]
Highly portable cross assembler (written in C). Initially
made for the Atari ST. Highly compatible with MAC/65.
- PC-65 Assembler, Version 1.0 beta, 1996 (Jan Feenstra) [D]
Two pass 6502 cross assembler for the PC. The source
format is highly compatible with the ST-65 assembler.
- Synassembler, 1982 (Steve Hales, Synapse Soft) [D]
Two pass 6502 assembler.
- ST-65 Assembler, 1991 (A. Stauffenberg, F.Offenga) [D]
A cross assembler for the Atari ST (written in 68000 asm).

b) BASIC
- Advan BASIC Compiler (Advan Language Designs)
- Atari 800 Basic, Version 1.0, 1981 (Microsoft) [D]
- Atari BASIC, Rev.C, 1983 (Atari) [C]
- Atari Microsoft BASIC II (Atari) [C]
- BASIC A+, Version 3.05, 1981 (OSS) [D]
- BASIC XL (OSS) [C]
- BASIC XE, 1985 (OSS) [C]
- Turbo Basic XL (Frank Ostrowski, Happy Computer) [D]
Interpreter, Version 1.5, 1985
Compiler, Version 1.1, 1985

c) C
- ACE C (John Palevich & Ralph Walden) [D]
This is a newer version of 'Deep Blue C'.
- C/65, Tiny C (OSS)
- C65
- CC65, 1989 (John R. Dunning) [D]
This public domain package includes; compiler, linker,
assembler and object librarian.
- CC8
- Deep Blue C, Version 1.2, 1982 (John Palevich, APX) [D]
Drawn from Ron Cain's public domain C-compiler.
- DVC C, Version 1.01, 1985 (Ralph E. Walden) [D]

- LightSpeed C, Version 1.08, 1986
(Clearstar Softechnology) [D]

d) PASCAL
- Atari Pascal, Version 1.0, 1982 (APX-20102) [D]
- Draper Pascal, Version 1.5, 1983 (Norm Draper) [D]
- Kyan Pascal, 1986 (Kyan Software) [D]
Package includes; compiler, linker and assembler.

e) LISP
- INTER-LISP/65, Version 2.1, 1981 [D]
(Special Software Systems, DataSoft)

f) FORTH
- ValForth (Valpar International)
- Extended fig-Forth (APX-20029)
- fig-Forth, Version 1.1 [D]
- fun-Forth (APX-20146)
- Grafik-FORTH
- QS Forth (Quality Software)

g) PILOT
- Atari PILOT, 1980 (Atari) [C]

h) LOGO
- Atari LOGO, 1983 (LCSI, Atari) [C]

i) All the rest
- Action!, 1983 (OSS) [D/C]
- Quick, Version 2.0, 1990 (Raindorf Soft) [D]

Subject: 13.14) What is the Atari XEP80 Interface Module?

This section written by: mailto:raukamp@dame.de (Thomas Raukamp)

Since the development of the Atari 8-bit line of computers in 1979, users wanted better text displays than the default 40x24. There has been some attempts to satisfy this need, like the Austin-Franklin board or the Ace 80/80xl cartridge. For more informations about these modifications read The Atari 8-bit Hardware Upgrade FAQ from David A. Paterson.

The Atari XEP80 Interface Module is Atari's entry to the 80 column field. It lets a XL, XE, 400 or 800 computer system display a full 80 columns across your monitor screen. The XEP80 provides a 256-character wide by 25-line display window. Up to 80 characters are displayed horizontally at once, and you can scroll horizontally all the way to the 256th character, depending on the application you're running. The XEP80 is connected to your system via a joystick port.

The XEP80 Module interprets commands from the computer for screen display or output to a printer. The module is supplied with an industry-standard 8-bit parallel port so you can connect a parallel printer to your Atari 8-bit (I

even use a HP LaserJet IV on my 130XE ;)).

All programs that use the standard screen call (E:) should be compatible with the XEP80 Module. The software provided by Atari supports a 320x200 graphics mode - this mode only support direct bit images. Note that you can't use all of the standard graphic capabilities of the Atari anymore.

Although Atari recommends a monochrome monitor for usage with the XEP80, it runs fine with any type of composite monitor. The output looks great on my Commodore 1084 for example.

Along with the module comes a software-package containing an AUTORUN.SYS file, which is the XEP80 handler. If you want to use the module with an application that is compatible with the XEP80, which has it's own AUTORUN.SYS file, you can append the application's AUTORUN.SYS on the module's AUTORUN.SYS.

Subject: 13.15) What makes some XL/XE software incompatible with the 400/800?

Konrad M.Kokoszkiewicz, mailto:draco@mi.com.pl writes:

XL/XE software won't work on 800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Subject: 13.16) What games run only on the 400 and 800 models?

Here they are!

Subject: 14.1) What vendors, developers, or publishers support the 8-bit
Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." Available via:

http://www.faqs.org/faqs/atari-8-bit/vendev/

and Usenet FAQ archives everywhere.

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

InfoMan (Trevor Holyoak), mailto:infoman@poboxes.com maintains a list called "Atari 8bit Support BBS's."

http://www.holyoak.com/atari/ATARIBBS.TXT

Subject: 14.3) Where is my nearest 8-bit Atari user group?

Rich Tietjens, mailto:atari@teleport.com maintains an Atari computer user group list at:

http://www.teleport.com/~atari/ugbbs.htm

Subject: 14.4) I'm new to the Atari. How do I use this thing?

"The Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms.

See: http://zippy.sonoma.edu/kendrick/nbs/new_and_emu.html

in Spanish: http://zippy.sonoma.edu/kendrick/nbs/new_and_emu.espanol.txt

If you'd like a text-only copy, simply send e-mail to mailto:kendrick@zippy.sonoma.edu with the subject:

send emulator faq

Subject: 14.5) Can I use an emulator to run my old Atari software on my new computer?

"The Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms.

See: http://zippy.sonoma.edu/kendrick/nbs/new_and_emu.html

in Spanish: http://zippy.sonoma.edu/kendrick/nbs/new_and_emu.espanol.txt

If you'd like a text-only copy, simply send e-mail to mailto:kendrick@zippy.sonoma.edu with the subject:

send emulator faq

Subject: 14.6) What hardware upgrades, modifications and add-ons are available?

The Atari 8-bit Hardware Upgrade, Modification and Add-On FAQ is maintained by
David A. Paterson, mailto:davepat@total.net or see:

http://www.geocities.com/SunsetStrip/Alley/1878/hard_faq.htm

Subject: 14.7) What is the HARD-Interlacing-Picture (HIP) format?

HIP is a new method to displaing pictures on small atari...

HIP stands for HARD-Interlacing-Picture and was found by
Members of HARD Software, Hungary in June, July 1996...

It enables to display 160 x 240 Pixels with 30 shades without
nearly all flickering (depends on the source-picture you use)...
HARD stands not for HARD or HEAVY Interlacing, just for the
inventors...

For more information, see the HIP-FAQ, located at:
http://www.uni-karlsruhe.de/~Marek.Tomczyk/Atari8/hipfaq.html

or contact HeAvEn at mailto:nadkar@fh-pforzheim.de

Subject: 14.8) How do I access Usenet, FTP, Gopher, and WWW by e-mail?

The Accessing the Internet by E-Mail FAQ is maintained by "Doctor Bob" Rankin,
mailto:BobRankin@MHV.net or see:

http://www.faqs.org/faqs/internet-services/access-via-email/

George,
First off, I'd recommend locating a copy of Bobterm 1.21. That's what
most of us use. It's pretty much the standard term program. Next, are you
sure that the modem cable you have for the 8-bit side was designed with
the 850 pin out? It is NOT PC standard pinout. This may be your problem.
The following is the 850 pinout for R1:

Pin# 1 DTR 6 DSR DTR=Data Terminal Ready
2 DCD 7 RTS DCD=Data Carrier Detect
3 TXD 8 CTS TXD=Transmit Data
4 RCV 9 Logic Pull Up RCV=Receive Data
5 SGnd Shell N/C SGnd=Signal Ground (not chassis
Ground
DSR=Data Set Ready/Modem Ready
PC 9 pin RS232 pinout RTS=Ready to Send
Pin# 1 DCD 6 DSR CTS=Clear to Send
2 RCV 7 RTS RI= Ring Indication
3 TXD 8 CTS N/C=no connection

4 DTR 9 RI
5 SGnd Shell Chassis Gnd

These are the only ones I have handy at the moment. The 25 pin version has it's own layout, but that end on your cable is probably fine. That definition should be in your modem manual.

Brian,
No. It needs a few minor modifications. BTW, the XF Cable uses the PC
Parallel port not the serial port. The infor for the mods/new cable
construction should be available from the maker, www.emulators.com . If not, I
have the info and can e-mail it to you.

3151. FS/T: Atari 8-bit computer items [11/06/97] {Christmas season special}

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-06 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <3468097a.2802657@nntp.ix.netcom.com>
Source record: 68935

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 11/06/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 5.00 Home Filing Manager, The (Atari)
$ 5.00 Print Shop, The (Br0derbund) {3}
$ 5.00 SynFile+ (synapse) {2} -- also includes Reference Card
$ 5.00 Timewise (Atari) {1}
$ 5.00 Touchdown Football (Electronic Arts) {2}
$ 5.00 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Loose cartridges, no box or manual:
$ 8.00 Alphabet Zoo [Spinnaker] -- no label
$ 4.00 Atariwriter
$ 9.00 Ballblazer -- XE cartridge
$ 5.00 Centipede
$12.00 David's Midnight Magic [Br0derbund]
$ 8.00 Delta Drawing [Spinnaker]
$ 8.00 Dig Dug
$ 5.00 Donkey Kong
$ 8.00 Frogger [Parker Brothers]
$12.00 Gateway to Apshai [Epyx]
$ 2.00 Missile Command
$ 5.00 Pac-Man
$ 8.00 Qix
$ 2.00 Space Invaders
$ 4.00 Star Raiders
$ 5.00 Super Breakout

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will
not boot up. Sold as non-working item, possibly repairable, for
parts only!

$ 7.00

*****

LOT #2

ATARI 1010 PROGRAM RECORDER, with power supply, and manual.

This item has not been tested.

I have plugged in this recorder, and it did power up. The
rewind and fast forward (advance) functions work. It must be
hooked to a computer to test the play and record functions.

$ 9.00

*****

LOT #3

ATARI 820 PRINTER, with two (2) rolls of paper and built-in
power cord.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$ 8.00

*****

LOT #4

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$23.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print" Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for 400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 8.00

*****

LOT #6

EPSON RX-80 PRINTER with built-in power cord.

$14.00

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.00 for the first disk-based software item and $1.25 for each additional disk-based software item, unless otherwise listed. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price

items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

3152. FS/T: printers [11/06/97] {Christmas season special}

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-06 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <346d0ae6.3166810@nntp.ix.netcom.com>
Source record: 68936
Cross-posted to: comp.sys.apple2.marketplace,comp.sys.atari.8bit,comp.sys.cbm,comp.sys.tandy,comp.sys.ti

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 11/06/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 233 for various 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site,
including 12 for the Commodore Vic-20 computer!

I have the following printers available, for sale or trade. These
were acquired with various computer systems, and while they may work
with more than one type of computer system, I have included the
type of system that they were acquired with, where applicable.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

LOT #2

COMMODORE MPS801 DOT MATRIX PRINTER, with built-in power cord.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$ 9.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for
something that isn't listed, please don't ask (because if I
had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
considered (especially if the trade offer overwhelms me). I
collect for over 50 different systems, so please feel free
to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't
serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

Sorry... this isn't a new Gem Drop for the Atari. I am planning on doing
it though...

What it IS, is a direct port of Gem Drop for X Window!
(I'm literally translating the original Gem Drop's code, which was in
Action! for the Atari, into C!)

Those of you with Linux or access to X Window boxes, look out for
an X version of my latest Atari game! :)

Also, speaking of X:

Someone started this !!!!!!!!!!!!!!!!!!

I must say I personally don't like this shitty behaviour of posting
messages across about eleven newsgroups.

My request is this..... Keep the posting limited to the newsgroup it
belongs to, so please delete all the newsgroups which you DON'T want this
message posted to from the header!!!!!!!!!!

Thank you,

Edwin ploegsma

>
> Not to put too fine a point on it but it's the ST that has a BIOS,not the
Atari.

The original post was in regards to the Atari 800, NOT the ST. What was
the point anyway? The 800 has a BIOS, er, what's wrong with that
statement?

> I assume that you're talking about the Atari HCS ("Home Computer System")
> becuase you mention the fabled SuperCartridge page,$D5.
> (which is what XON.COM for SDX accesses to switch the cartridge back in)

Again, this was the Atari 800. The right cartridge slot has a line that
maps to the 0xD5XX address space. It has also been called ~CTLIO on some
schematics.

> If the programme did call device handler routines directly,then it
wouldn't
> work with your upgrade nor any other RAM screen handler.It would also not
work
> on all versions of the Atari since the handler routines move from version
to
> version.Better to go through the OS (CIO).

This only worked in the 800, because it was only the 800 that, of the 8 bit
Ataris, had two slots. The screen calls did go through the OS, that's why
our 80 column board was compatible with all software that used the OS
calls...and not compatible with ones that accessed the hardware directly,
unless it was written to access our hardware directly.

<snip>

I'm confused, were you trying to correct my post or what was you were
trying to say?

Austin Franklin

3160. FS Atari 2600/7800 Cartridges

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-06 00:00:00 UTC
From: phantomm@eastky.net
Message-ID: <878839670_OASIS_@eastky.net>
Source record: 68944

We have the following Atari 2600/7800 game cartridges for sale in the US.
All cartridges work correctly to the best of our knowledge.
There are no manuals or boxes for any of these cartridges.
The labels are in very good condition on all of the 7800 cartridges.
The labels are in poor condition on most of the 2600 cartridges.
We want to sell all 2600/7800 cartridges at one time to someone in the US.
There are 22 cartridges in all, and we are asking $45 for all 22 carts.
Shipping to anyone in the US is included in the price. So thats less than
$2 a cartridge. The reason for selling these is that we just have no use
for them and they are just taking up space.
Here are the titles.

ATARI 2600 Game Cartridges ATARI 7800 Game Cartridges
------------------------- -------------------------
Boxing Food Fight
Space Invaders Ms.Pac-Man
Off The Wall Joust
Pac-Man Pole Position II (2 cartridges)
PitFall! Hat Trick
Warlords Alien Brigade
Donkey Kong Robotron 2084
Defender Mean 18
Ms.Pac-Man Donkey Kong
Freeway Dig Dug
Combat

These cartridges will be sold for $45 to the first E-Mail we receive.
However if some one offers more than $45 for the lot, then they will be
sold to the highest offer.
We will only accept a US Postal Money Order for payment.
Anyone in the USA thats interested can contact us at the e-mail address
below.

Direct all responses in E-Mail to: bensmith@teleport.com

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or
keep track of your Mailing/Shipping address. To expedite your order,
include your Mailing/Shipping address and it wouldn't hurt to include
your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff
that needs work you can have some ***FREE*** Atari stuff for the cost
of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard
Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some
thing you've been looking for, Something you might want & something New
to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml.
And Jump to my FTP site linked to my Web Site so you can Download Free
Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's no inconvenience. I do ask that you specify Atari
8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not
Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

3162. Re: Atari 800 vs. 800xl?

Newsgroup: comp.sys.atari.8bit

> superior machine?

--------Response by AB----------
In the 800XL the functionality is there, but without the card slots, making it cheaper to produce. This was a big deal after the Commodore 64 came along. The 800XL does everything the 800 did except:

Play 4 player games, I don't remember any.
Allow for a second cart. for the right slot, don't remember anything that went in there anyway.

The 800, and 400 for that matter were released in 78-79 time frame. The 800xl, which followed the 1200xl was released in 83. The other reason to get the xl not mentioned in the prior posts is the GTIA v's CTIA video chip. The GTIA (256 color pallate) was released only in the last 800's and all 1200/800XL's. So buying a 800 you may be getting a CTIA (128 color pallate) machine.

For a while in the early 80's you could buy an GTIA chip to retrofit old 800/400 machines. I doubt anything like this exists now.

There were a number of projects to bring a 800xl up to 256K or RAM (used as a RAM disk as devices D6:,D7:. The most popular was called RamboXL, and worked with a patched version of Dos2.5. I built one into an 800XL at that time.

> A 32-bit 6502???

65832. Don't know whether they got around to develop it --- I lost
track when I stopped working on/with my 65816 machine. But they did
call the 65816 a "16 bit CPU", although I didn't quite agree with
them. So I suppose the 65832 was going to be the "32 bit" version (I
don't remember for sure, but I think they talked about the "65832
and the FPU", not about the "65832 FPU".

Brian,
No. It needs a few minor modifications. BTW, the XF Cable uses the PC
Parallel port not the serial port. The infor for the mods/new cable
construction should be available from the maker, www.emulators.com . If not, I
have the info and can e-mail it to you.

Or how about building Doc Brilliant's real-time hardware-based clock as
featured in Analog, issue 31, June 1985? All the components are still
available (I got mine from RS Components here in the UK).

Ah well, just a suggestion!

Best wishes

Jerry

3166. Don't Fear's Huge 3rd Auction Part 2: (update 11)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-06 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <34627CCB.97D62A9C@prodigy.com>
Source record: 68950
Cross-posted to: comp.sys.atari.8bit,rec.games.vectrex,rec.games.video.misc,rec.games.video.marketplace,rec.games.video.nintendo,rec.games.video.classic

Don't Fear's Huge 3rd Auction Part 2: (update 11)

1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to
send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to
play can you spot the two classic game collectors. Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

From: Amir Moran <love999@hotmail.com>
Message-ID: <3461DC58.F18@hotmail.com>
Source record: 68952

Hi there,

I still have my old joysticks for atari2600 I used to play with.
These were digital joysticks with only one fire button.(simple isn't it)
I Hate the new type of Joysticks they sell today
(1000000 buttons,Sticks that are bigger then the keyboard,expensive..)

I just want to play the old games (which require only one fire button),
with the emulators using my old lovely joysticks.

Can someone built a cable/converter that can connect the old joysticks
to the port of the PC??
(Point: All the emulators "PCAE20" , "Stella" are allready programed
to use the analogic functions of the PC port
as digital. So what we need to do is to "dress" the old digital
joystick that has 9 pins to analogical PC port that has 15 pins.)

Anyone has an idea, or maybe a convereter like this allready exists?

Email me.
Moran.

Hi, I'm connect to Fido as well wit hmy bbs, but the areas which I can
import from my boss node does not contain any 8bit area (anymore).
So, even since I have Fido, I cannot access it.
I would appreciate it a lot if you would tie in that base into this area.

Games that can be used with a trackball/st-mouse ?
Well, ARKANOID can be played with joystick, paddles, and trackball (or
ST-mouse ofcourse).

OPERATION BLOOD (the 'not-lightgun' version) is able to use a joystick,
connected to the first joy-port, and a mouse connected to the second port.
Use Select to toggle between the mouse-mode (Amiga- or ST-mouse).

The BRUNDLES (Lemmings-clone) has a mouse-mode, which is great for such
games.

I'm sure I have some more, but can't remember which one's right now...

Message-ID: <879724717@stackbbs.xs4all.nl>
Source record: 68834

The RT-8 cartridge is not the only realtime/date clock for the Atari 8-bitters.
In Germany is also such a thing available (the ARGS realtime-clock). This 'cart' needs a driver to communicate with the actual clock, or when the ARGS operating-system is used, a handler is built-in.

The schematics are published in ABBUC-magazine some time ago, so I _think_ they're PD, so you can make your own...

I also have an old issue of ANALOG-magazine, which describes how to make a hardware-clock to connect to the second joystick-port of the Atari 8-bitter...

But your idea to send the time/date from the PC to the XL looks pretty funny. And I know it sure is possible, cause both APE (Tucker) as SIO2PC (Kennedy) have a commandframe to go to 'terminal-mode', so you can start a little file on the XL to ask at APE to let it send some bytes containing the time and date, which must be implemented in APE ofcourse...

Then the 8-bit program only has to read a string of numbers and place them into the time-registers of Sparta-Dos...

Well, I saw APE in full action some times, and now I know the programming-capabilities of the author, I'm sure it isn't a big task to read time/date at PC and send the numbers via the SIO2PC interface.

The only thing is, does he want to support this feature ? :-)

I'm not a registered user of APE, so I can't ask it to Steven...

```
< 1-byte files >
Large partitions on Atari 8-bit harddrives do still use 256 bytes/sector
(Uhh, 128 is also possible, but not very usefull I think)...

A 16Mb partition is taking up 65535 sectors of 256-bytes (= double
density), both with Sparta- and My-dos...

---------------------------------------

p.s. for everyone who replied to message's posted at 'Thunderdome Atari
8-bit gateway' -> It is possible some message's have not made it to this
board, which is running on a real Atari 8-bitter. This is cause I'm using
Pro!-BBS, which has a limit of 250 message's/usegroup, and the last
package was a _very_ big one, so the older msg's where overwritten before
anyone had got the change to read them...
Sorry about that, but some message's are also very big, so they must be
split up into more msg's to let them fit in the format Pro!-BBS is using.
Well, guess what happens with all these auction/quoted/sellers
message's...

Let me see.... the thread is talking about an operating system for all
types of computer, all makes and models, and this chap doesn't see the
relevance....

Hmm....????

Somehow I don't quite understand the problem!

3176. Atari 400 hisses through rf

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-07 00:00:00 UTC
From: dengoth@uss.net
Message-ID: <34613d02.10726907@news.uss.net>
Source record: 68955

I have a question that someone must have had an experience with. I just picked up an Atari 400. When I plugged it in to the tv it had an annoying static/hiss noise through the tv speakers. It did not go away when I changed the TV/GAME switch to one I know works.

I opened the Atari 400 up and couldn't see anything visually wrong with it (other then the speaker being lose). Is the cord to the switch defective? Please help.

Also, if anyone knows where to get a power supply for an 800XL, please post.

Thanks in advance.

I have been trying to reconnect to the Pro boards in Europe to no avail.
I have tried two e-mail addresses for Fox-1 and have gotten the messages
returned as undeliverable. I am connected to the Hell BBS and we are
exchanging messages. I need to also recontact Jon Mordosky to see if he
will return. I also have a message for Bo and Ernest Schreurs about
software available for the Pool disk that was under the "Elfin Magic"
label here in the US and under "Demon Software" distribution in Europe

If anyone can contact Bo and Ernst or Fox-1 please ask them to contact
me here at: <pmulvey@erols.com>

Thanks....

Well it is always great to hear someone talk about the 1400 & 1450
computers.
I have a production model 1400XL and a prototype 1450XLD w/ two parallel
drives.

> To make things even stranger, the 1400XL motherboard is marked
"1400XL".
> It is a almost completely hand soldered, and the modem is a perf/wirewrap

> board.
>

Mine actually says 1400 on it, along with the other one I have that I'm
fixing for a
friend. The board reads on the bottom:

C061742 Rev X3
Atari Copyright 1983

The modem board has the following part #: C062171 REV A

> It is interesting to note how they went from the "1400XL" to the
"1450XL"
> boards. However, for the record, did the production run of 1400XL's use
> 1450XL boards and what is the part number of the side plastic that is
used
> on those same machines?
>
The part # on my 1400XL side plastic is: C060097 REV X3 CAV A

There was a run of 1400XL boards (voice syn and modem only) and a 1450XL
run which had the same as the 1400XL, but has a connector which a parallel
drive board plugs in on. Their part layout is exactly the same except for
the parallel drive board connector and power connection.

My 1450XLD is one of the prototype TONG boards. This one is larger than the 1450XL board and has all parts (modem and disk drive) on a single motherboard. The 1450XL and 1400XL use the Votrax SC01 voice synthesizer, the 1450XLD uses a next generation Silicon Systems Inc SSI-263 voice synthesizer. It also has two prototype 40 pin chips (their covers for the chip are held on by scotch tape) that are said to be language chips for the voice (the voice on mine doesn't work). There is also a spot for a 48 pin chip which was said to be a Apple II compatiablity (rumor though; I haven't found any documentation to support that).

3184. 3.5" upgrade to xf551

Newsgroup: comp.sys.atari.8bit

Hey all,

I have been fairly unlucky so far in getting hardware advice from this 8bit group (granted some of you have replied with information - and you know who you are - thanks!).

Perhaps there just aren't many hardware hackers around anymore, I don't know.

I have several projects on the table, including hard drive hookup and eprom burner, etc. I know these have all been done before, but I never had the time, or just wasn't in the loop when other people were working on these upgrades.

My current question to you all is this:

I want to upgrade my xf551 drive to a 720+Kb 3.5" drive. I know Bob Woolley has a design for this, but I have been unsuccessful in reaching him lately. At one time he said he would send me the documentation for this upgrade but I think he got side-tracked or became engaged otherwise.

So, does any kind soul out there who has this upgrade information (somebody has to have it) want to disseminate it?

Ok, I am begging. Pleeeease!

And talking about hard drives, if anyone, ANYONE has information on a free (or relatively inexpensive) IDE interface, please let me know. Otherwise I will have to break out the specs and try to design one myself. (This may prove difficult without a o'scope!).

cowpoke.

Bob Puff (CSS) was selling this upgrade a couple of years ago, along with other improvements for the XF-551. I know at least one guy who had his drive done by Puff. There was also an outfit called Innovative Concepts that was selling a kit to do the same thing.

The problem most people run into involves connectors and cables. I think some modification has to be made there. Also, I know at least one guy who took the trouble to mount a fan on his drive, and also put the 3.5" drive on top. A toggle switch (center off) allowed booting from either mechanism and provided a visible way to see if the drive was turned on or not.

I'm not a hardware hacker, and I have no idea what went into those projects except what I already mentioned. But I know that it has been done.

BTW, where are you going to get a 720K drive at this time?

> that went in there anyway.

We used the right cartridge slot for the console software for our 80 column board. The cartridge occupied none of the 8k address space assigned to the right slot, so you could use full 16k cartridges in the left slot. The 80 column board plugged into the third slot on the 800 (the 800XL was missing these expansion slots....).

The Monkey Wrench II was a right-cart by Eastern House Software (they also made an XL/XE version). It was a programmers tool for auto line-numbering/renumbering, disassembling, machine-language monitoring, etc. I was very successful at backing up some of my cassette games that were otherwise copyprotected (like zaxxon & frogger) using the MWII. I also got some good dissassembly use out of it by plugging in a cart game, like pacman, and booting with the MWII in place. I could get to the monitor to dissassemble the cartridge and make changes to give me 99 men, etc. Obviously, you couldn't do this with the XL/XE version since you need BOTH cartridges in place.

There weren't many right-carts, but the MWII and the 80-col carts were the most memorable. I believe OSS had some other programming tools meant for right-carts.

Carry on...
Steven

No production run of 1450 or 1400 XL's ever existed. Some small proto runs were made but never a production run. The "final sample" 1450XL power adaptor was not delivered until 7/6/84 (I remember the day because it was everyones last!).

Two major revisions of the 1400XL motherboard exist. The first was a dedicated 1400 only PCB that was dropped in favor of a generic 1400/1450 motherboard with the drive connector on it. Various revisions of modem and voice daughterboards were implemented due to problems sourcing enough components for each.

By mid 84 I'm not even certain the 1400 was even worked on anymore, all emphesis was on the 1450 and "Micky" the Atari Amiga.. The Mac had just been shown and the Atari "Amiga" game system was at least a year away. Atari could not ship the system as a computer with keyboard for at least 1 year after Amiga introduced there computer per the Atari's agreement with Amiga. Needless to say.....things were not looking good!

The 4.5 mhz audio oscillator is dead, perform the following....trust me!

On the motherboard you will find a tall adjustable coil (4.5mhz adj) next to it will be 2 silver 820 pf mica axial capacitors.

Gently but firmly squeeze each capacitor body with a needle nose screwdriver. The odds are 98% that your sound will return to normal, you may have to adj the coil a bit afterwards.

Let us know how it works out.

Attempting to run natively, without a translator, was implied.

I'll add a note to that effect.

Oh, since I'm posting, somebody without a reply address told me in e-mail
that Micro Illustrator (by Chalkboard) and Zaxxon (DataSoft) do run on an
800XL, without a translator. Any confermations? He didn't mention which
version of Zaxxon, 16K or 32K, was used.

Thanks,

-Michael

Where did anyone mention ST? NO, this was NOT for the ST. This was for the ORIGINAL Atari Computers...the 400/800. Funny how no one else, but you, had this propensity for misunderstanding...yet again. If I post to the comp.sys.atari.8bit, assume it's for the 8 bit Atari computers.

You also have this propensity to want to try to correct people (in a kind of a 'binge posting'), when what was originally said is perfectly accurate. Though what you reply is not technically incorrect, but totally irrelevent to the conversation at hand. At least this is what you did in the two responses you did to my posts.

: good!

I would really love to write up a history on the 1400 line but everyone's
story is different and no one seems to know exactly what happened.

I won't even bring up that rumor of those 1450XLD cases being smashed.

Why did Atari require all 1400XL nameplates removed?

How many plastic cases for the 1400XL were made?

There is a REV X3 1400 board. What is different from the REV X2 board?

Does anybody have the schematics to the 1450XL floppy daughter board or
even a board!?

Has anybody copied the TONG floppy circuitry and applied it to the XLs
in general?

questions...questions...

Sorry for lateness of this, about a week behind on
comp.sys.atari.8bit...

re: The Atari 8-bits being related to the Amiga:

I've known about this for years, as I've been a fan of Jay Miner
and the others who were involved since before the 2600.
It is really too bad that Atari didn't back out of the Amiga
oops _did_, and that the ST became the "New Atari computer".
Almost everything is similar in operation between the A8 and
Amiga: Display lists for the Atari, the Copper for the Amiga;
just as an example. If someone really wanted to do it, you
could write a GUI for the Atari 8-bit that had pull-down
screens as on the Amiga. I've done it, in a really rudimentary
way. in Basic XE. I cheated, though, and merely MOVEd one
screen over the other, as you scrolled it with a paddle.
But it proves the concept, and all it would take would be
a well-written Display list interrupt to pull it off,
something that is _just_ beyond my capacity right now.
Was the 1600XL a modified Amiga that was Atari 8-bit
compatible, as is my best guess from the available info?
Also, due to the similarities, I feel that theoretically
speaking, an Atari 8-bit emulator would be the easiest for
the Amiga to do.

3205. Re: scsi drives with the MIO

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-08 00:00:00 UTC
From: he110@cleveland.Freenet.Edu
Message-ID: <640d32$47d@alexander.INS.CWRU.Edu>
Source record: 68839

re: SCSI drives on the MIO:

Using an Adaptek or Xebec board with an MIO will let many RLL
or MFM drives act as SCSI or SASI drives. If you have an
embedded SCSI drive, just plug it in and know the number of
heads and cylinders. Right now, my setup includes a 256K MIO
(my 1M went kaput), a Xebec board, and a Seagate ST-251 5 1/4
drive (38M). I have a Black Box and a Quantum 230M 3 1/2 drive
waiting in the wings, for when I can get my partitions backed
up, and a special bracket to put a 3.5" mech in a 5 1/4 slot.
If at all possible, I would start saving for a Black BOX, as
if you've had the MIO for awhile, you will know that it causes
unexplained lock-ups and other really annoying problems.
That's why I have the BB. My MIO is the weak link in my
Atari system. Too bad it isn't more reliable, as I like the
way it is set up. Now if I can get Bob Puff to make more
Floppy Boards, and upgrade the BB ROMS to use larger
partitions, as I know where I can get a 4G SCSI drive for $200!
Now wouldn't _FOUR_GIGABYTES_ be cool on at Atari 8-bit System?
Of course, broken up into the Black Box's 96 partitions...

3207. SIO cables

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-08 00:00:00 UTC
From: "J. Reyes" <fixit@fred.net>
Message-ID: <01bcebe4$5b1f9ac0$36d3fccd@pc0020>
Source record: 68841

Does anybody know where I can buy SIO cables for my Atari 800 and 1200XL? I want to try out the APE program using an old 286, and would like to tackle the building of the interface cable myself, but cannot seem to locate a place that sells the Atari cables. Any suggestions?

Thanks!

Jay

Re: artifacting...

Weird! Users of Atari 8-bit emulators want Artifacting emulated
as well, while _I_, as a _REAL_ Atari 8-bit user, wish I could
get rid of it! I am using a .42 dot pitch Magnavox monitor,
wishing I could use a finer dot pitch MutiSync monitor
directly with my Atari. Perhaps the message from a while ago
might help me out somewhat, the one about NTSC-to-VGA
adapter boxes from Best Buy. Unfortunately, the nearest Best
Buy is about 80 miles from here, and I don't want to go unless
the crap is actually there!

go figure!

re: having a TCP/IP protocol embedded in a program:

Isn't this a harder way to do it? Wouldn't you want to write
TCP/IP as a handler, and release it with instructions on accessing
it, so that programmers wouldn't have to mess with it? My
friend Lonny flatly refuses to write an IRC port for the A8
unless there is a seperate Slip/PPP handler in place. He
prefers the modular approach, and I tend to concur. What
possible advantage could be gained by having TCP/IP code inside
every Net app that would be written? He would be writing in
Action, remember. What is the specifications for an SDX
DEVICE? That would be interesting if both TCP/IP and a CD-ROM
driver could be written as such DEVICEs.

re: Fairchild Channel F and Vectrex...

The Fairchild uses cartridges that look kind of like an 8 track
tape, and the main console if I remember has a clear dust
cover. The joysticks are really weird, just a vertical thing
with a movable knob on the top! (not makin this stuff up!)
An example of a more popular cart for this would be
Doodle/QuadraDoodle. Rudimentary drawing program and Surround
clone.

The Vectrex was somewhat more popular, and is the only
videogame console that had its own monitor built in!
The monitor was a vector screen, as opposed to the raster
screen we are all used to in a TV. Games that you would
remember that used a vector screen in the arcade would be
(examples) Asteroids, BattleZone, Red Baron, and my all-time
arcade favorite- Star Castle. I have an Asteroids clone
for the Vectrex, as well as a cool driving game. Really
neat to have trees and other scenery grow larger smoothly,
rather than blockily in today's racing games. And all this
in 1979! Oh, I also have a Scramble clone for it as well.
Picked it up for US $20.

3216. TAF Flea Market November 19th

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-08 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3463fbb4.0@nemo.idirect.com>
Source record: 68850

Agenda for Toronto Atari Federation meeting, November 19th, 1997:

It's time once again for TAF's annual and famous FLEA MARKET!

Yes, once again TAF hosts a night where Atarians from around Toronto and elsewhere converge to buy and sell hardware and software for our favorite platform. Need a part or peripheral? Want to go to a more powerful system? Looking for that rare piece of software utility or game? You just may find it here! TAF's large library of PD/Shareware will also be there for sale to interested parties, as well as TAF's membership clerk for taking new memberships or renewing current ones.

Tables are available for non-members to display their products for the low cost of $2.00 , and may be reserved by contacting Dan Dreibelbis at 416-766-4743 or via e-mail at dreibel@idirect.com . Setup starts at 6:30, with doors opening at 7:30 PM; entry to non-members is $2.00.

As always, piracy is not condoned by the Toronto Atari Federation; anyone found to be selling pirated software will be dealt with severely!

Come and sell your old junk, and buy yourself a treasure! Have Fun!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

It's also true that the Atari trademark, as used in the coin-op games, still lives. Warner held on to that division when they sold the Home Entertainment division to the Tramiels. Later they sold the arcade stuff to another outfit (Williams?) that continues the trademark and is even bringing out new products under it.

>What exactly is a vector screen?

A conventional TV or computer screens is drawn by the stream of
electrons in what is called a "raster" fashion, scanning across
the screen in a line, then returning to starting side (generally
scanning from left to right) slightly lower down the screen (generally
top to bottom) and tracing another line. This forms a series of
horizontal lines, or a raster. Representation inside a computer
is fairly straight forward, assigning a linear sequence of memory
locations to each position on the lines as they are drawn (for bit
mapped graphics ... text is the same, but the bits are drawn from
a character bit mapped ram or rom).

A vecter screen is instead addressed as a direct, X-Y coordinate
of the point at which one wishes to display a dot. The most familiar
example is the oscilliscope, which you may have used in a college
lab course of some sort, or seen in an old Sci-Fi film. An object
is represented as a series of line segment .. ie a line from X1,Y1
to X2,Y2. This is the internal representation used in a number of
CAD programs, as it lends itself to moving objects and rescaling
them easily. It is also generally much smaller than a bit mapped
representatin of the same object at most menaingful resolutions.
Fonts, these days, are generally represented as a vecter based
type of form (Postscript or Truetype fonts), leading to easy
and continuous adjustments of sizes with resolution only limited
by the display device.

An example .... a box .... might be represented like so:

bit mapped, binary representation:

```
00000000000000000000000000000000
00000011111111111111111111000000
00000010000000000000000001000000
00000010000000000000000001000000
00000010000000000000000001000000
00000010000000000000000001000000
00000010000000000000000001000000
00000011111111111111111111000000
00000000000000000000000000000000
```

vecter graphics respresentation:

```
7,2 -- 26,2
26,2 -- 26,8
26,8 -- 7,8
7,8 -- 7,2
```

I did one with a VBI handling the up/down movement by rewriting the Display list and the main BASIC XL program just drew on the two different mode 7 displays. I didn't make it complicated enough to handle different graphics modes, but there was a DLI that kept the palettes separate between the screens.

The demo for this never was included in the user group software library. The demo did simulated screens for the Amiga and the ST with disparaging comments about the ST.

>But it proves the concept, and all it would take would be

>speaking, an Atari 8-bit emulator would be the easiest for
>the Amiga to do.

It should be. The hard part is that 8-bit DLIs are actually more flexible than Amiga copper instructions. (DLIs code encompasses all of 6502 instructions. The copper basically allows only a wait for beam position and then write to one of the custom registers.) Trying to convert 6502 on the fly into copper lists would be real frustrating and then you have to consider self-modifying code. Ick. So, the brute force method of using a 320x200 256 color screen as the basis of

the Atari display is easier to do than trying to interpret DLI code into another hardware instruction set.

But, sprite conversion would be easy. Scrolling shouldn't be too hard.

> What exactly is a vector screen?

A vector SCREEN is a CRT display wherein both x- and y-axis are
controlled rather than rastered, i.e., the gun beam can move diagonally
across the screen as opposed to time sweeping left-to-right
top-to-bottom one-line-at-a-time. Good for wire-frame games like
astroids and such.

please help a sad old atari fan! before most of you were born, atari supplied a game called 'Lone Raider', on tape, with one of their first 'home computers'. I am desperately trying to find a copy of this game, to play on my PC, as it was the only game I ever mastered from start to finish. I am now trying to re-live those glory days, so I would appreciate any help in trying to find this game. Cheers, Ange amsant@globalnet.co.uk

only docs on that were published in
Atari Classics (Bob Woolley). FTE promised on long ago, but no-one has
heard from him in years. For the 551 upgrade you can try Computer
Software Services (Bob Puff) at: (716) 467-9326. His premimum version
will allow two drive mechanisms at once.

Pat.

Hi,

I was wondering, if someone uses PC-XFORMER, how can you
run software on ATARI cartridges ? Also, if you use the
PC-XFORMER cable, does the cassette deck work ? And if Yes,
how do you hear sounds on th cassette deck for some
programs ? (like the language series ?).

Sure, something like "FIX-XL" will work for most games that won't
"normally" run on the 800XL, but if there is anything which looks
for something in the second cartridge slot (very unusual, and in fact
I don't know of any examples), or if it is a game that requires
input from four joysticks (or at least actively polls for input from
four joysticks), it still may not work on the 800XL even if a
translator helps it to boot on the XL.

Well, there's a very obvious 4-player game, arguably the best
8-bit game ever and to this day still ranked by CGW magazine as one
of the five best games ever: M.U.L.E.

The FIX-XL program will get past the complaint about what it finds
in ROM (as when you usually boot it up on an 800XL), but when the
program tries to poll for input from four joystick ports, everything
messes up.

This, in fact, is the only reason I can't exclusively rely on
my 800XL for what I do.

Don't Fear's Huge 3rd Auction Part 1 (update 12)

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds.
If you choose to send a personal check please allow 2-3 weeks for the
check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of
final bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to play can you spot the two classic
game collectors.
Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This part of the auction features:
Atari 2600 - 308 Items Atari 5200 - 31 Items

This auction is dedicated to the Old Lady. Without her a lot of this would have been impossible. Thank You

3237. Don't Fear's Huge 3rd Auction Part 2: (update 12)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-08 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <3464E7D5.28D57B81@prodigy.com>
Source record: 68871
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.nintendo,rec.games.vectrex,rec.games.video.misc,rec.games.video.marketplace

Don't Fear's Huge 3rd Auction Part 2: (update 12)

1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to
send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to
play can you spot the two classic game collectors. Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This auction is dedicated to the Old Lady. Without her a lot of this
would have been impossible. Thank You

3238. Don't Fear's Huge 3rd Auction Part 2: (update 11)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-08 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <3463F5EA.2D92C1A7@prodigy.com>
Source record: 68872
Cross-posted to: rec.games.video.classic,rec.games.video.nintendo,rec.games.vectrex,rec.games.video.misc,rec.games.video.marketplace,comp.sys.atari.8bit

Don't Fear's Huge 3rd Auction Part 2: (update 11)

1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each
bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to
send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of
the item.
10. Email me if you are looking for a specific label varaition, I might
have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may
bid.
14. All orders over $100 will recieve as an added bonus my Freshman
video project. You'll get a chance to
play can you spot the two classic game collectors. Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

From: itrek@mindspring.com
>(Mike Taylor)
Date: Sun, 09 Nov 1997 12:15:15 GMT

Does anybody know where I
>can buy some Atari joystick extension
cables?

I've found one SEGA extension
>cable for $1 at Funcoland that works
fine with Atari joysticks but I haven't
>been able to find any more.

itrek@mindspring.com

Although they are not the cheapest place on earth. All Radio Shack
stores carry them. they'll work just fine on the A8. You might also try
grage sales, flee markets, or your local Good Will / Salvation Army stores.
They seem to come up with things like this from time to time.

!!
well, you just have to rattle his cage sometimes. maybe more than
sometimes.... what is your real name and how do I send you stuff? I do
admit that those of you that send me an SASE tend to get a response more
often than those who send me messages - mostly because your SASE looks
like something, where an e-mail printout looks just like all the other
paper lying around the Attic.

The IDE is easy - it was in Atari Classics. The 3.5 will need to be
pulled out of the SLCC archives...

Bob Woolley

no 'scope? why don't you ask for one? teach a man to fish......

\
I guess I should try a 1.44 drive - shouldn't be hard. I have the same
problem.... running out of 720K drives. 1.44 sell new for about $25,
now!

Speaking of Fido - does anyone know of a place on the Net
where one could access the Atari Fido message base? An Internet BBS
for example?

Thanks!

This auction is dedicated to the Old Lady. Without her a lot of this would have been impossible. Thank You

3248. Don't Fear's Part 2 (Last Public Post)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-09 00:00:00 UTC
From: Don't Fear <WQQT56A@prodigy.com>
Message-ID: <34666C87.A7184CA6@prodigy.com>
Source record: 68791
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.mis,rec.games.video.marketplace,rec.games.vectrex,rec.games.video.nintendo

This is your last chance to join my auction! This is the last public post!

Don't Fear's Huge 3rd Auction Part 2: (update 13)

1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.
3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. Trades may be accepted, if the offer is right.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check all in U.S. funds. If you choose to
send a personal check please allow 2-3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item or to see a scan of the item.
10. Email me if you are looking for a specific label varaition, I might have it.
11. I reserve the right to withdraw any item at any time.
12. I reserve the right to refuse a bid. (Bworkman clause)
13. The auction will enter the G1, G2, Sold phase on November 10th
Once an item has reached the G2 stage, only those on the update list may bid.
14. All orders over $100 will recieve as an added bonus my Freshman video project. You'll get a chance to
play can you spot the two classic game collectors. Good Luck!
15. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Ok, if somone can get me this game, and I can beat my Atari 800 into running, my life will be one step closer to perfection.

I played this game for about week long, long ago, off a borrowed casette. I remember being able to climb ladders, and grabbing crystals or something on the screen, and a level where you shot little UFO's that flew around the screen. I've never forgotten that game, and apparently if exists on several systems. If there's a PC version that would be OK, but I would love to get the genuine one I played long ago.

There was at least one right slot cartridge - the Monkey Wrench -
which adds a set of tools, like auto- and re-number, to Atari Basic.

I still have the blighter somewhere.

If you can't find the real thing, you can also download an emulator. XL-it runs MULE (only problem is a small graphic glitch with the spaceship flying under the town).

As far as I know, XL-it won't support 4 joysticks so you won't be able
to play a 4 player game with this emulator. You're better off getting
an 800 XE.

3259. Where To Buy Joystick Extension Cables?

>> thing! Ah. Memories... Might have to dig it out again!

This game cemented my love of the 8-bit. If you read the original packaging, it says that one of your goals is to discover the "secret of immortal life". I found that there are actually two solutions to that. One is on about level 15 where you get the yin and yan symbols (about 5 extra lives). There's another which no one else to my knowledge seems to have found. If you look at you score display when you fall on the green yamo and the ninja SIMULTANEOUSLY, it will climb up a lot suddenly. Here's the trick:
On two player mode, go to level 3 (where the columns and stair are with the mooing cow.) Go with bruce lee to the bottom left hand side of the ladder without climbing down and move yamo underneath bruce. If you move down enough, the ninja will follow. Now, without falling move bruce left to right and he will repeatedly fall down on both guys. I have done this literally dozens of times. Just takes a little practice.
You can get in a few minutes hundreds of thousans of points. If you are patient, like I was I got more that 100 lives, believe it or not the program will count these lives in hexadecimal eg. 1a, 1b so forth. The first time I did this I stayed up until 6am going thru all 20 levels about 6 times or more. It does get harder each time you go around.

I know of that, too. The best way to achieve it was to have Yamo and the Ninja one level below you. Then doing a running, dropkick motion off the edge, you landed on both of them. Extra high points and lives!

Another way, which I'm doing from memory, involves the third screen, where the ladder is. If you climbed to the far left, about a few notches above the ground, Bruce Lee would "lock up." His character would flicker endlessly. You sort of having to be going down and going to the left at the same time or so. Also, you need to be in two player mode for this to work successfully. Then you would bring the Yamo to where Bruce is, and he would chop you to death. It's another way to get more points and lives. Do this over and over. And then, when you're ready to resume real playing, have Yamo kill Bruce. During this phase of the game, incidentally, the Yamo is kind of sluggish and flickering, but it works out all right.

Incidentally I fund out that if you get too many lives (I think more than 5a?)
When you killed bruce it would end the game right there. So the best thing to
do is not get greedy and quit when you have 90 something lives.

If you could get those utilities to work on a single density disk, they
should work with enhanced density. Single density disks use FM recording,
128 bytes per sector, 18 sectors per track, 40 tracks. Enhanced density
is MFM, 128 bytes per sector, 26 sectors per track. If the disks were
written with DOS 3.0, it has a very different file system from DOS 2.0 or
2.5. You might also have problems reading sectors that coincide with the
index hole (Atari disk drives ignore the index hole, but IBM drives do not.)

Yaaaaay! Let's run through it all again, shall we?

I think the problem of relevence is that there are currently a lot of group on this list who'll see G-OS turn from a multi-format, erm, format, into something that'll drop the lower-end machines and use the capabilities of the higher ones only, unless all you Amiga owners will be happy to have your machine reduced to a Speccy.

(People talking about anadisk and deana and reading Atari 8
single and enhanced dens disks.)
I forgot who, but Chan or somebody successfully read a A8
sngl dens disk with pc. I just want to mention, as Bill
Marcum said, that A8 sngl dens is FM and most modern pc
floppy controller can't do FM, sngl density, at least
that's what I understand. That's why C. Marslett's 'Util'
and 'MyUtil' must have dbl dens disks. And my own A8
read/write programs must have dble density. I understand
it takes a rather special pc floppy controller, or a very
old floppy controller, to read sngl dens. FM disks.
DId Chan have a very old controller?

There is a TCP/IP stack for the 6502 that comes with my selfbuilt OS,
only it supports SLIP only, no PPP. Also there is no port
(yet - who volunteers?) for the Atari 8bit. It's pretty simple
to port taking the new version (kernel in late beta, other stuff still
to do, but the kernel is pretty easily ported, and device driver are
simple to write.

3274. atari being used as screen saver for tv station

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-10 00:00:00 UTC
From: cowpoke1@hotmail.com
Message-ID: <879179778.17800@dejanews.com>
Source record: 68808

Hey all,

Just wanted to let you know what I discovered this weekend.
Some background: I live just outside of Austin, Texas.

I turned on the TV this past Saturday morning, and I couldn't believe my eyes. I was flipping throught the lower channels, and my eye caught something. I flipped back to the channel that caught my eye (my cable channel #4; NBC?), and lo and behold, there was the READY prompt with the screen running in ATTRACT mode! I can't believe that the cable company has an atari!

I have tried to reach them a couple times since then, and their (Cable company) telephone has always been busy...but I will get to the bottom of this mysterious event!

cowpoke

3275. WTB/T: 400/800 Super Breakout and Gorf!

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-10 00:00:00 UTC
From: bfuehring@aol.com
Message-ID: <19971110172900.MAA06939@ladder02.news.aol.com>
Source record: 68809

Hi all. I'd like to acquire these to carts (super breakout and gorf) for the atari computer for a buddy of mine. I have a few uncommons for the 2600 to trade, or I could just buy these from you. In fact, if you have a for sale list, I'll take a look at it, because my buddy is looking for other games. We just aren't sure what all was available for the 400/800, though we have seen these two above in person. In fact, I just bought Gorf from a store here in Kansas City for $3.99!!!! and it didn't freakin' work. Bum deal.

Thanks
Brett

3276. Yo' Classic Game Phreaks

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-10 00:00:00 UTC
From: Honda13@bigfoot.com
Message-ID: <879190775.31228@dejanews.com>

3277. SpartaDOS help

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-10 00:00:00 UTC
From: STDJAT02@shsu.edu
Message-ID: <3467AD15.30E82237@shsu.edu>
Source record: 68811

Hey,
I've downloaded and uncompressed the SpartaDOS files from the 'net,
but I have been unale to get any of the emulators to boot with it.
I have no Sparta-formatted disks.

Any suggestions or help is appreciated.

3278. Auction - Lots of Atari 8-bit Software/Games, Koala Pad

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-10 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971110123900.HAA20039@ladder01.news.aol.com>
Source record: 68812

Everything Auction - Update 7

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing. Actual shipping added. -$15 classicgmr

You'll find a bunch of cable companies used the 8bits for
their info channels. I can't remember the name of the software
but I helped set up a couple of them. It worked really nice.

I'm interested in purchasing any of the following:
Atari 1400XL
Atari 1450XLD
Atari 1090XL
ICD MIO (256k or 1MB)
CSS Black Box

If you have one you're interested in selling, or you have any other rare hardware you'd like to get rid of, please let me know. :)

Thanks!

If memory serves, the legendary John Harris still writes on the Atari with such programs -- cable, hotel TVs, etc. Stuff like that.

James King (jeking@xmission.com) wrote:
: I've read several messages now that have referred to a PPP stack for the
: 8bit Atari. How about we go one step further? How about a TCPIP
: stack/driver for the Atari, and a method for getting an RJ45 ethernet
: connection to a LAN?

: Far fetched? Realistic? Let me know.

I've been doing some PBI research, and I think it might be possible to
make a PBI ethernet interface assuming we could get together the proper
hardware + drivers.

We could even make it network bootable with BOOTP and TFTP :P~~

I'm much more software oriented though, so I'll definitely need some
help getting it all interfaced together.

Any volunteers?

HI,

if anybody wants brand new shrinkwrapped copies of Donkey Kong or Donkey Kong Jr. I can get them for $5 plus shipping. Also I can get brand new shrinkwrapped Return of the Jedi: Deathstar Battle for the same. Let me know and I'll pick 'em up for you.

Thanks!

When I counted characters on a text line in De Re Atari I realized
that the text characters themselves appear to tbe fixed spaced,
but the space between words is not fixed. The entire thing is
micro-spaced, so sometimes your OCR sees that at one space between
words, and others are seen as two (or more?) spaces.

Just a theory.

DeRe Atari Section 4, Player-Missile Graphics will follow shortly.

I had a few problems (unexpected cold boot of my Psion blew away
6 hours of work.)

The text file that follows for the chapter is word wrapped at
character position 65 for regular paragraphs; example program
listings are not word wrapped.

(BTW, can someone ENTER the sample programs into an 8-bit/emulator
and be sure they work?)

Also, there is no pagination in the text file.

Right now this is a straight ascii text file, LF line terminators.
(I'm not sure what the PC newsreader will think of that.)

I have a version on the Psion with a few of the illustrations done
as embedded sketches in word, with pretty paragraph formatting and
such. If anyone cares, this may be available soon when I finish
the other illustrations. This will probably also be available as
a FinalWriter 97 document for the Amiga some time later.

If anyone wants to see a Word for Office 97 version, I'll do it if
someone first gives me screen dumps of what the sample programs
really look like when they run. heh heh heh

De Re Atari: A Guide To Effective Programming

Section 4

PLAYER-MISSILE GRAPHICS

DIFFICULTIES WITH HIGH-SPEED ANIMATION

Animation is an important capability of any home computer system. Activity on the screen can greatly add to the excitement and realism of any program. Certainly animation is crucial to the appeal of many computer games. More importantly, an animated image can convey information with more impact and clarity than a static image. It can draw attention to an item or event of importance. It can directly show a dynamic process rather than indirectly talk about it. Animation must accordingly be regarded as an important element of the graphics capabilities of any computer system.

The conventional way to effect animation with home computers is to move the image data through the screen RAM area. This requires a two-step process. First, the program must erase the old image by writing background values to the RAM containing the current image. Then the program must write the image data to the RAM corresponding to the new position of the image. By repeating this process over and over, the image will appear to move on the screen.

There are problems with this technique. First, if the animation is being done in a graphics mode with large pixels, the motion will not be smooth; the image will jerk across the screen. With other computers the only solution is to use a graphics mode with smaller pixels (higher resolution). The second problem is much worse. The screen is a two-dimensional image, but the screen RAM is organized one-dimensionally. This means that an image which is contiguous on the screen will not be contiguous in the RAM. The discrepancy is illustrated in Figure 4-1.

IMAGE Corresponding
Bytes in RAM

```
........................ 00 00 00
........*..**..*........ 00 99 00
........*.****.*........ 00 BD 00
........********........ 00 FF 00
........*.****.*........ 00 BD 00
........*..**..*........ 00 99 00
```

..... 00 00 00

Spacing of Bytes in RAM:

00 00 00 00 99 00 00 BD 00 00 FF 00 00 BD 00 00 99 00 00 00 00

Image Bytes Scattered Through RAM

Figure 4-1 Noncontiguous RAM Images

The significance of this discrepancy does not become obvious until you try to write a program to move such an image. Look how the bytes that make up the image are scattered through the RAM. To erase them, your program must calculate their address. This calculation is not always easy to do. The assembly code just to access a single byte at screen location (XPOS, YPOS) would look like this (this code assumes 40 bytes per screen line):

```
LDA SCRNRM Address of beginning of screen RAM
STA POINTR zero page pointer
LDA SCRNRM+1 high order byte of address
STA POINTR+1 high order pointer
LDA #$00
STA TEMPA+1 temporary register
LDA YPOS vertical position
ASL A times 2
ROL TEMPA+1 shift carry into TEMPA+1
ASL A times 4
ROL TEMPA+1 shift carry again
ASL A times 8
ROL TEMPA+1 shift again
LDX TEMPA+1 save YPOS*8
STX TEMPB+1 into TEMPB
STA TEMPB low byte
ASL A times 16
ROL TEMPA+1
ASL A times 32
ROL TEMPA+1
CLC
ADC TEMPB add YPOS*8 to get YPOS*40
STA TEMPB
LDA TEMPA+1 now do high order byte
ADC TEMPB+1
STA TEMPB+1
LDA TEMPB TEMPB contains the offset from the top of screen to pixel
CLC
ADC POINTR
STA POINTR
LDA TEMPB+1
ADC POINTR+1
STA POINTR+1
```

```
LDY XPOS
LDA (POINTR),Y
```

Clearly, this code to access a screen location is too cumbersome. This is certainly not the most elegant or fastest code to solve the problem. Certainly a good programmer could take advantage of special circumstances to make the code more compact. The point is that accessing pixels on a screen takes a lot of computing. The above routine takes about 100 machine cycles to access a single byte on the screen. To move an image that occupies, say, 50 bytes, would require 100 accesses or about 10,000 machine cycles or roughly 10 milliseconds. This may not sound like much, but if you want to achieve smooth motion, you have to move the object every 17 milliseconds. If there are other objects to move or any calculations to carry out there isn't much processor time left to devote to them. What this means is that this type of animation (called "playfield animation") is too slow for many purposes. You can still get animation this way, but you are limited to few objects or small objects or slow motion or few calculations between motion. The trade-offs that a programmer must make in using such animation are too restrictive.

PLAYER-MISSILE FUNDAMENTALS

The ATARI Home Computer solution to this problem is player-missile graphics. In order to understand player-missile graphics, it is important to understand the essence of the problem of playfield animation: the screen image is two-dimensional while the RAM image is one-dimensional. The solution was to create a graphics object that is one-dimensional on the screen as well as one-dimensional in RAM. This object (called a player) appears in RAM as a table that is either 128 or 256 bytes long. The table is mapped directly to the screen. It appears as a vertical band stretching from the top of the screen to the bottom. Each byte in the table is mapped into either one or two horizontal scan lines, with the choice between the two made by the programmer. The screen image is a simple bit-map of the data in the table. If a bit is on, then the corresponding pixel in the vertical column is lit; if the bit is off, then the corresponding pixel is off. Thus, the player image is not strictly one-dimensional; it is actually eight bits wide.

Drawing a player image on the screen is quite simple. First you draw a picture of the desired image on graph paper. The image must be no more than eight pixels wide. You then translate the image into binary code, substituting ones for illuminated pixels and zeros for empty ones. Then you translate the resulting binary number into decimal or hexadecimal, depending on which is more convenient. Then you store zeros into the player RAM to

clear the image. Next, store the image data into the player RAM, with the byte at the top of the player image going first, followed by the other image bytes in top to bottom sequence. The further down in RAM you place you place data, the lower the image will appear on the screen.

VERTICAL MOTION

Animating this image is very easy. Vertical motion is obtained by moving the image data through the player RAM. This is, in principle, the same method used in playfield animation, but there is a big difference in practice; the move routine for vertical motion is a one-dimensional move instead of a two-dimensional move. The program does not need to multiply by 40 and it often does not need to use indirection. It could be as simple as:

```
LDX #$01
LOOP LDA PLAYER,X
STA PLAYER-1,X
INX
BNE LOOP
```

This routine takes about 4 milliseconds to move the entire player, about half as long as the playfield animation routine which actually moves only 50 bytes where this one moves 256 bytes. If high speed is necessary, the loop can be trimmed to move only the image bytes themselves rather than the whole player; then the loop would easily run in about 100-200 microseconds. The point here is that vertical motion with players is both simpler and faster than motion with playfield objects.

HORIZONTAL MOTION

Horizontal motion is even easier than vertical motion. There is a register for the player called the horizontal position register. The value in this register sets the horizontal position of the player on the screen. All you do is store a number into this register and the player jumps to that horizontal position. To move the player horizontally simply change the number stored in the horizontal position register. That's all there is to it.

Horizontal and vertical motion are independent; you can combine them in any fashion you choose.

The scale for the horizontal position register is one color clock per unit. Thus, adding one to the horizontal position register will move the player one color clock to the right. There are only 228 color clocks in a singe scan line; furthermore, some of these are not displayed because of overscan. The horizontal position register can hold 256

positions; some of these are off the left or right edge of the screen. Position 47 corresponds to the left edge of the standard playfield; position 208 corresponds to the right edge of the standard playfield. Thus, the visible region of the of the player is in horizontal positions 47 through 208. Remember, however, that this may vary from television to television due to differences in overscan. A conservative range of values is from 60 to 200. This coordinate range can sometimes be clumsy to use, but it does offer a nice feature: a simple way to remove a player from the screen is to set the player's horizontal position to zero. With a single load and store in assembly (or a singe POKE in BASIC), the player will disappear.

OTHER PLAYER-MISSILE FEATURES

The system described so far makes it possible to produce high-speed animation. There are a number of embellishments which greatly add to its overall utility. The first embellishment is that there are four individual players to use. These players all have their own sets of control registers and RAM area; thus their operation is completely independent. They are labeled P0 through P3. They can be used side by side to give up to 32 bits of horizontal resolution, or they can be used independently to give four movable objects.

Each player has its own color register; this color register is completely independent of the playfield color registers. The player color registers are called COLP(X) and are shadowed at PCOLR(X). This gives you the capability to put much more color onto the screen. However, each player has only one color; multicolored players are not possible without display list interrupts (display list interrupts are discussed in Section 5).

Each player has a controllable width; you can set it to have normal width, double width, or quadruple width with the SIZEP(X) registers. This is useful for making players take on different sizes. You also have the option of choosing the vertical resolution of the players. You can use single-line resolution, in which each byte in the player table occupies one horizontal scan line, or double-line resolution, in which each byte occupies two horizontal scan lines. With single-line resolution, each player bit-map table is 256 bytes long; with double-line resolution each table is 128 bytes long. This is the only case where player properties are not independent; the selection of vertical resolution applies to all players. Player vertical resolution is controlled by bit D4 of the DMACTL register. In single-line resolution, the first 32 bytes in the player table area lie above the standard playfield. The last 32 bytes lie below the standard playfield. In double-line resolution, 16 bytes lie above and 16 bytes lie below the standard playfield.

MISSILES

The next embellishment is the provision of missiles. These are 2-bit wide graphics objects associated with the players. There is one missile assigned to each player; it takes its color from the player's color register. Missile shape data comes from the missile bit-map table in RAM just in front of the player's table. All four missiles are packed into the same table (four missiles times 2 bits per missile gives 8 bits). Missiles can move independently of players; they have their own horizontal position registers. Missiles have their own size register, SIZEM, which can set the horizontal width just like the SIZEP(X) registers do for players. However, missiles cannot be set to different sizes; they are all set together. Missiles are useful as bullets or for skinny vertical lines on the screen. If desired, the missiles can be grouped together into a fifth player, in which case they take the color of playfield color register 3. This is done by setting bit D4 of the priority control register (PRIOR). Note that missiles can still move independently when this option is in effect; their horizontal positions are set by their horizontal position registers. The fifth player enable bit only affects the color of the missiles.

You move a missile vertically the same way that you move a player: by moving the missile image data through the missile RAM area. This can be difficult to do because missiles are grouped into the same RAM table. To access a single missile, you must mask out the bits for the other missiles.

PLAYFIELD AND PLAYFIELD PRIORITIES

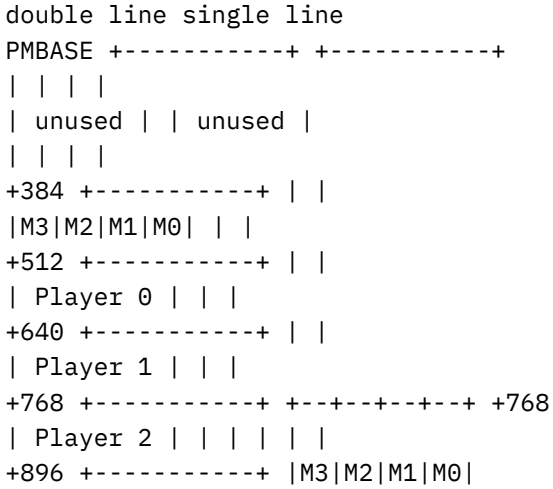
An important feature of player-missile graphics is that players and missiles are completely independent of the playfield. You can mix them with any graphics mode, text or map. This raises a problem: what happens if a player ends up on top of some playfield image? Which image has priority? You have the option to define the priorities used in displaying players. If you wish, all players can have priority over all playfield color registers. Or you can set all playfield color registers (except background) to have priority over all players. Or you can set player 0 and player 1 (henceforth referred to as P0 and P1) to have priority over all playfield color registers, with P2 and P3 having less priority than the playfield. Or you can set playfield color registers 0 and 1 (PF0 and PF1) the have priority over all players, which then have priority over PF2 and PF3. These priorities are selected with the priority control register (PRIOR) which is shadowed at GPRIOR. This capability allows a player to pass in front of one image and behind another, allowing three-dimensional effects.

HARDWARE COLLISION DETECTION

The final embellishment is the provision for hardware collision detection. This is primarily of value for games. You can check if any graphic object (player or missile) has collided with anything else. Specifically, you can check for missile-player collisions, missile-playfield collisions, player-player collisions, and player-playfield collisions. There are 54 possible collisions, and each one has a bit assigned to it that can be checked. If the bit is set, a collision has occurred. These bits are mapped into 15 registers in CTIA (only the lower 4 bits are used and some are not meaningful). These are read only registers; they cannot be cleared by writing zeros to them. The registers can be cleared for further collision detection by writing any value to register HITCLR. All collision registers are cleared by this command.

In hardware terms, a collision occurs when a player image coincides with another image; thus, the collision bit will not be set until the part of the screen showing the collision is drawn. This means that collision detection might not occur until as much as 16 milliseconds have elapsed since the player was moved. The preferred solution is to execute player motion and collision detection during the vertical blank interrupt routine (see Section 8 for a discussion of vertical blank interrupts). In this case, collision detection should be checked first, then collisions cleared, then players moved. Another solution is to wait at least 16 milliseconds after moving a player before checking for a collision involving that player.

There are a number of steps necessary to use player-missile graphics. First you must set aside a player-missile RAM area and tell the computer where it is. If you use single-line resolution, this RAM area will be 1280 bytes long; if you use double-line resolution it will be 640 bytes long. A good practice is to use the RAM area just in front of the display area at the top of RAM. The layout of the player-missile area is shown in Figure 4-2.



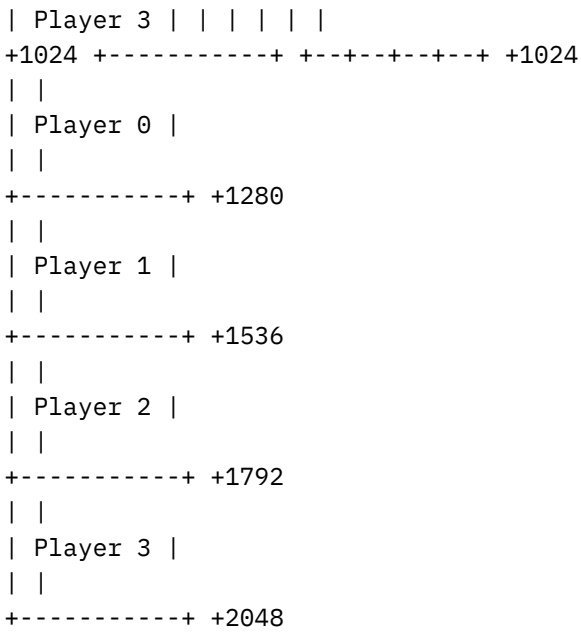


Figure 4-2 Player-Missile RAM Area Layout

The pointer to the beginning of the player-missile area is labeled PMBASE. Because of internal limitations of ANTIC, PMBASE must be on a 2K address boundary for single-line resolution, or a 1K address boundary for double-line resolution. If you elect not to use all of the players or none of the missiles, the areas of RAM set aside for the unused objects may be used for other purposes. Once you have decided where your player-missile RAM area will be, you inform ANTIC of this by storing the page number of PMBASE into the PMBASE register in ANTIC. Note that the address boundary restrictions on PMBASE preclude vertical motion of players by modifying PMBASE.

The next step is to clear the player and missile RAM by storing zeros into all locations in the player-missile RAM area. Then draw the players and missiles by storing image data into the appropriate locations in the player-missile RAM area.

Next, set the player parameters by setting the player color, horizontal position, and width registers to their initial values. If necessary, set the player/playfield priorities. Inform ANTIC of the vertical resolution you desire by setting bit D4 of register DMACTL (shadowed at SDMCTL) for single-line resolution, and clearing the bit for double-line resolution. Finally, enable the players by setting the PM DMA enable bit in DMACTL. Be careful not to disturb the other bits in DMACTL. A sample BASIC program for setting up a player and moving it with the joystick is given below:

```
1 PMBASE=54279: REM Player-missile base pointer
2 RAMTOP=106: REM OS top of RAM pointer
3 SDMCTL=559: REM RAM shadow of DMACTL register
```

```
4 GRACTL=53277: REM CTIA graphics control register
5 HPOSP0=53248: REM Horizontal position of P0
6 PCOLR0=704: REM Shadow of player 0 color
10 GRAPHICS 0: SETCOLOR 2,0,0: REM Set background color to black
20 X=0: REM BASIC's player horizontal position
30 Y=48: REM BASIC's player vertical position
40 A=PEEK(RAMTOP)-8: REM Get RAM 2K below top of RAM
50 POKE PMBASE,A: REM Tell ANTIC where PM RAM is
60 MYPMBASE=256*A: REM Keep track of PM RAM address
70 POKE SDMCTL,46: REM Enable PM DMA with 2-line res
80 POKE GRACTL,3: REM Enable PM display
90 POKE HPOSP0,100: REM Declare horizontal position
100 FOR I=MYPMBASE+512 TO MYPMBASE+640: REM this loop clears player
110 POKE I,0
120 NEXT I
130 FOR I=MYPMBASE+512+Y to MYPMBASE+518+Y
140 READ A: REM This loop draws the player
150 POKE I,A
160 NEXT I
170 DATA 8,17,35,255,32,16,8
180 POKE PCOLR0,88: REM Make the player pink
190 A=STICK(0): REM Read joystick
200 IF A=15 THEN GOTO 190: REM If inactive, try again
210 IF A=11 THEN X=X-1: POKE HPOSP0,X
220 IF A=7 THEN X=X+1: POKE HPOSP0,X
230 IF A<>13 THEN GOTO 280
240 FOR I=8 TO 0 STEP -1
250 POKE MYPMBASE+512+Y+I,PEEK(MYPMBASE+511+Y+I)
260 NEXT I
270 Y=Y+1
280 IF A<>14 THEN GOTO 190
290 FOR I=0 TO 8
300 POKE MYPMBASE+511+Y+I,PEEK(MYPMBASE+512+Y+I)
310 NEXT I
320 Y=Y-1
330 GOTO 190
```

Once players are displayed, they can be difficult to remove from the screen. This is because the procedure by which they are displayed involves several steps. First, ANTIC retrieves player-missile data from RAM (if such retrieval is enabled in DMACTL). Then ANTIC ships the player-missile data to CTIA (if such action is enabled in GRACTL). CTIA displays whatever is in its player and missile graphics registers (GRAFP0 through GRAFP3 and GRAFM). Many programmers attempt to turn off player-missile graphics by clearing the control bits in DMACTL and GRACTL. This only prevents ANTIC from sending new player-missile data to CTIA; the old data in the GRAF(X) registers will still be displayed. To completely clear the players the GRAF(X) registers must be cleared after the control bits in DMACTL and

GRACTL have been cleared. A simpler solution is to leave the player up but set its horizontal position to zero. Of course, if this solution is used, ANTIC will continue to use DMA to retrieve player-missile data, wasting roughly 70,000 machine cycles per second.

APPLICATIONS OF PLAYER-MISSILE GRAPHICS

Player-missile graphics allow a number of very special capabilities. They are obviously of great value in animation. They do have limitations: there are only four players and each is only eight bits wide If you need more bits of horizontal resolution you can always fall back on playfield animation. But for high-speed animation or quick and dirty animation, player-missile graphics work very well.

It is possible to bypass ANTIC and write player-missile data directly into the player-missile graphics registers (GRAFP(X)) in CTIA. This gives the programmer more control over player-missile graphics. It also increases his responsibilities concomitantly. The programmer must maintain a bit map of player-missile data and move it into the graphics registers at the appropriate times. The 6502 must therefore be slaved to the screen drawing cycle. (See the discussion of kernels in Chapter 5.) This is a clumsy technique that offers minor improvements in return for major programming efforts. The programmer who bypasses the hardware power offered by ANTIC must make up for it with his own effort.

Players can also be used to produce apparent 3-dimensional motion. This is accomplished with the player width option. Each player is drawn with one of several bit maps. One bit map shows the player as 6 bits wide, and another shows the player in 8 bits. When the 6 bit player is drawn at normal resolution, it will be 6 color clocks wide. The next size step is achieved by going to double width with the 6 bit image; this will be 12 color clocks wide. The 8 bit image will be 16 color clocks wide. Similarly, going to quadruple width will produce images 24 and 32 color clocks wide. Thus, the image can grow in size from 6 color clocks to 32 color clocks wide. This technique is used very effectively in STAR RAIDERS�. The Zylons there are two players with 16 bits, so the size transitions are even smoother.

Player-missile graphics offer many capabilities in addition to animation. Players are an excellent way to increase the amount of color in a display. The four additional color registers they provide allow four more colors on each line of the display. Of course, the 8-bit resolution does limit he range of their application. There is a way around this that can sometimes be used. Take a player at quadruple width and put it onto the

screen. Then set the priorities so that the player has lower priority than a playfield color. Next, reverse that playfield color with background, so that the apparent background color of the screen is really a playfield color. The player disappears behind this new false background. Now cut a hole in the false background by drawing true background on it. The player will show up in front of the true background color, but only in the area where true background has been drawn. In this way the player can have more than eight bits of horizontal resolution. A sample program for doing this:

```
1 RAMTOP=106: REM OS top of RAM pointer
2 PMBASE=54279: REM ANTIC player-missile RAM pointer
3 SDMCTL=559: REM Shadow of DMACTL
4 GRACTL=53277: REM CTIA graphics control register
5 HPOSP0=53248: REM Horizontal position register of P0
6 PCOLR0=704: REM Shadow of player 0 color register
7 SIZEP0=53256: REM Player width control register
8 GPRIOR=623: REM Priority control register
10 GRAPHICS 7
20 SETCOLOR 4,8,4
30 SETCOLOR 2,0,0
40 COLOR 3
50 FOR Y=0 TO 79: REM This loop fills the screen
60 PLOT 0,Y
70 DRAWTO 159,Y
80 NEXT Y
90 A=PEEK(RAMTOP)-20: REM Must back up further for GR. 7
100 POKE PMBASE,A
110 MYPMBASE=256*A
120 POKE SDMCTL,46
130 POKE GRACTL,3
140 POKE HPOSP0,100
150 FOR I=MYPMBASE+512 TO MYPMBASE+640
160 POKE I,255: REM Make player solid color
170 NEXT I
180 POKE PCOLR0,88
190 POKE SIZEP0,3: REM Set player to quadruple width
200 POKE GPRIOR,4: REM Set priority
210 COLOR 4
220 FOR Y=30 TO 40
230 PLOT Y+22,Y
240 DRAWTO Y+43,Y
250 NEXT Y
```

This program produces the following display:

```
**********************
**********************
**********************
**********************
```

```
**********************
**********************
**********************
**********************
**********************
**********************
**********************
```

Figure 4-3 Masking a Player for More Resolution

SPECIAL CHARACTERS

Another application of player-missile graphics is for special characters. There are many special types of characters that cross vertical boundaries in normal character sets. One way to deal with these is to create special character sets that address this problem. Another way is to use a player. Subscripts, integral signs, and other special symbols can be done this way. A sample program for doing this is:

```
1 RAMTOP=106: REM OS top of RAM pointer
2 PMBASE=54279: REM ANTIC player-missile RAM pointer
3 SDMCTL=559: REM Shadow of DMACTL
4 GRACTL=53277: REM CTIA's graphics control register
5 HPOSP0=53248: REM Horizontal position register of P0
6 PCOLR0=704: REM Shadow of player 0 color register
10 GRAPHICS 0: A=PEEK(RAMTOP)-16: REM Must back up for 1-line resolution
20 POKE PMBASE,A
30 MYPMBASE=256*A
40 POKE SDMCTL,62
50 POKE GRACTL,3
60 POKE HPOSP0,102
70 FOR I=MYPMBASE+1024 TO MYPMBASE+1280
80 POKE I,0
90 NEXT I
100 POKE PCOLR0,140
110 FOR I=MYPMBASE+512+Y to MYPMBASE+518+Y
120 READ X
130 POKE MYPMBASE+1100+I,X
140 NEXT X
150 DATA 14,29,24,24,24,24,24,24
160 DATA 24,24,24,24,24,24,184,112
170 ?" ": REM Clear screen
180 POSITION 15,6
190 ?"xdx"
```

This program produces the following display:

```
***
*** *
**
**
```

```
** **
** **
** ** ** ** ** **
** **** ****** ****
** ** ** ** **
** **** ** ** ****
** ** ** ****** ** **
**
**
**
* ***
***
```

Figure 4-4 Using a Player as a Special Character

A particularly useful application of players is for cursors. With their ability to smoothly move anywhere over the screen without disturbing its contents they are ideally suited for such applications. The cursor can change color as it moves over the screen to indicate what it has under it.

Player-missile graphics provide many capabilities. Their uses for action games as animated objects are obvious. They have many serious uses as well. They can add color and resolution to any display. They can present special characters. They can be used as cursors. Use them.

Yes, a real tracball returns quadrature like a mouse -- what direction
the user is rolling the ball in and how fast the ball is rolling --
and it takes a lot of polling to get accurate results.

The Atari and (I think) Wico tracballs have a joystick mode and a
tracball mode selectable with a switch. In joystick mode rolling
the ball returns the equivalent joystick value closest to the
direction the ball is rolling. No matter how fast the ball rolls,
the same value is returned. So, in Missile command, the cursor moves
only as fast as a joystick would allow. But, when you switch the
tracball and the game into real tracball mode, you can zip the cursor
anywhere on the screen by rolling the ball faster.

Larry Black says that if he permitted full linking, the Fido higher-ups wouldn't go for it and might kick the echo off. They're worried about the non-moderated nature of Usenet. I don't blame them, if they want to keep Fido moderated.

But that leaves links to existing BBS networks that run on 8-bits and STs. Any thoughts on how differences in message length, headers, etc., can be overcome without some sysop spending 36 hours a day doing it manually?

And typed the illustrations too.

BTW, the word "single" is mistyped as "singe" twice.

Also, in the last illustration each of the "*" and " " characters
representing pixels in the integral sign needs to be doubled.
i.e. "**" and " ". The "*" in the text characters (I did my best
to remember what the Atari ROM bitmapped looked like for "x" and
"d") represent a half color clock, so each of the player's bits
are should be drawn with two "**" for a full color clock.

Yes, the trees are the most fascinating thing in this game. :-)

Almost impressing like the Vectrex game with speech output. The only word
one really understands is "Eek, Spike!", but all that in 8KB...

>rather than blockily in today's racing games. And all this
>in 1979!

Where does this number come from? I've just built a 128KB cartridge with
the 16 most popular games for my friend's Vectrex. In the identification
header of the ROM images the year 1982 was the oldest...

>Oh, I also have a Scramble clone for it as well.
>Picked it up for US $20.

Getting "some" Vectrex is usually no problem, but getting one without
joystick damages or images burnt into the display requires real luck - at
least here in Germany.

Shortly after I posted the previous message, I took a look at the second
one. It has a bigger board under the mech, and marked "SMIRK" in a few
places, two on the chip, and one on the board. Removing the board, shows
that it goes directly into one of the chip sockets, with an oval-shaped
crystal going through an oval shape hole in the board.

What's the difference with the HCP and Happy?

>George,

Have you told your PC to ignore the CTS line?
BobTerm leaves it off (it's the RTS line from your Atari's point-of-view) so a
MODEM or PC term programme would seem not to work,but it'd be working like it's
supossed to.You might try running Kermit-65 on your Atari.
Once you've gone to the terminal screen in Kermit-65 (with the "c" command),
the RTS line (CTS from your PC's point-of-view) will remian on until you
re-boot.You could also activate CTS with a (VERY SIMPLE) BASIC programme.

>First off, I'd recommend locating a copy of Bobterm 1.21. That's

MyDOS is limited to 16MB 256-byte sector disks.

I always wondered why they didn't make it so that you could decide how many sectors a directory took up when you created it.It'd probably have to be a multiple of 8 to keep it simple.

You might sort games into "subjects" like "RPG" and "PacMan rip-offs".

>SpartaDOS STARTUP file

What does SpartaDOS have to do with it?
MyDOS now also has the capability of loading multiple programmes at boot-up.

>> that used the SIO2PC facility to query the date/time from the PC?
>Or how about building Doc Brilliant's real-time hardware-based
>clock as featured in Analog, issue 31, June 1985? All the
>components are still available (I got mine from RS Components here
>in the UK).

You should write a Z: handler to access \DEV\CLOCK$ on the PC.But PC Mirror prevents you from doing this so special support to access devices through the REMOTE.COM interface would have to be implemented in APE and SIO2PC.
Of course while a generic MS-DOS device interface would be nice,you're really not supossed to access \DEV\CLOCK$ directly but to ask MS-DOS for the time so a time-specific interface would be needed.

Then a simple programme could be written to read the time from Z: and POKE it into SpartaDOS on start-up.You'd probably want to run it before starting up anything whose files needed accurate time-stamps or when ever SpartaDOS has lost track of the time.

The SpartaDOS Jiffy-Clock has no sanity checking and can easily go insane. (especially while running A-TAR-ZEE MODEM,the Z-MODEM protocol)
You'd think that if the jiffy-clock had advanced to far it'd assume that it was insane and be set to zeros (no time).
If a programme is running on a system with no Z: device it should just maintain it's own real-time clock via the OS's own 24-bit jiffy RT-clock at 18.
This is maintained by the VBI (a NMI) so it shouldn't lose time unless a external programme (of a BBS) re-configured the ANTIC to stop triggering VBIs.

(a NMI is a interupt that can't be blocked.But in the Atari's case the source of the interupt (ANTIC) can be de-activated)

While there is also the hardware timers (POKEY) to consider,I've read that the OS's SIO support uses all 4 timers.This is why some demos use their own SIO code so that they can play music (which also uses the POKEY) and load programme sub-sections at the same time.But this would break compatibility in a BBS or other "useful" programme.

There are also OS timers but only "system timer" 1 constantly run and it's used for SIO.(the other timers freeze during SIO)

Net-Tamer V 1.09 - Test Drive

Try placing opaque tape over the density select hole (the one that is not
the write protect) .. this should switch the drive to 720 K mode for the
1.44 meg disks.

I should get to work on Chapter five this week. I will be a little more careful about checking for errors. I finally learned how to train OmniPage pro, so my next chapter should be better....I can't believe you typed it!

I do wish some more people would step forwared and say this information is useful to them though. I believe only about two people said that they would like to see more.

Hallo,

I use the Pokey Emulator for 800XL.

Now I have a lot of Cart-Files.

I use the Command-Line : pokey -rom16 donkeyko.bin

but is come alway an error.

What must I do to use the Card Files ?

Regards Thomas

3317. Re: 1400XL Production Run Question

Newsgroup: comp.sys.atari.8bit

From: Curt Vendel <cvendel@aol.com>
Message-ID: <34689D6F.8E69CC21@aol.com>
Source record: 68762

Karl,

Whatever information you've received from Jerry is directly from the horse's mouth and everything he has stated is quite accurate, so if you wish to base an article or web-site on the history of the 1400XL, then use's his information as a basis. If your interested I have some documentation on the 1400XL modem, I believe I also has specific schematics on it as well. As for 1450XLD cases being smashed? I'm not familiar with that, one thing I will tell you, the 1450XLD case was horrible in terms of structural strength. It used the same thin flimsy pastic as all the other XL's and there was no ribbing underneath it nor were there central support struts to support a monitor of any size or weight for long and what eventually happens is the case starts to warp inward and if left long enough, the brown plastic over the keyboard will push against the "7" key on the keyboard and it gets stuck. Fortunately with a hot blow dryer and some patience you can correct the bending and warping before it becomes permanent.

As for schematics on the 1450XL disk drive daughtercard, you might want to contact John Hardie at Atari Gamming Headquarters www.atarihq.com, he is an extremely busy individual so if he doesn't get back to you for a while be patient, but he may have some technical data to assist you.

As for your system board, try to locate an honest to God 1400XL motherboard, they are rarier then the 1450XL motherboard and its nice to see the differences in the designs. If you really want to do some digging and see a truly unique animal, try to find an actual 1450XLD "TONG" motherboard, its huge and filled to the brim with lots to examine. One note of caution, if you do locate one, make sure its on a level surface and careful check ALL of the sockected components as the board is very large and flexes very very easily and the components tend to pop out of their sockets. Oh, I'm not sure if they have anymore, but for a while American Technavision was selling Atari 1450XLD power supplies. Hmmm, lets see... well thats it in a nutshell, like the I said, take Jerry's comments with confidence, he was there when it all happened. Good luck in your efforts...

Curt

Sounds like you have a Happy modified 1050. Are you sure it isn't HCP?
It's been some time since I used a Happy, so I couldn't exactly begin to
tell you how to use it. You should be able to find the version 7 software
on some of the Atari 8bit FTP sites.

Source record: 68766

Wow.... Curt your being too kind too me :)

Anyways, for a period of time I was the engineering technician on the 1400XL before moving into the Atari Amiga group.

Some of the 1450XL stuff in the latter days were done outside of Atari to speed it to production. A variety of combinations existed mainly due to the fact we could not "single source" components. If we used a voice chip there had to be a back up vendor, hence the "daughterboard" concept.

I have no knowledge of 1450 cases ever being smashed, nor any "strange" stories with regards to the 1400 labels. I'm pretty certain the 1400 was never going to be released which is why it's rarer than 1450's and no labels to be found on the proto's. When I left the project in late 83 1400 activity was almost nil. It was pretty stupid to have 2 seperate groups working on the 1400/1450 as there was.

I might point out nobody was excited about doing either project and both were considered a waste of time in engineering. Just another example of rehashing the same old stuff into different cases for marketing.

Some of the proto IC's that have appeared in some Tong 1450's were "Fat Freddie" an enhanced Freddie chip taking into account the internal drive. I think the 48 pin empty socket was intended for the Amy (much hyped) sound chip that never made it to Silicon, but I could be wrong.

Bob, here's my experience: The 1.44 drive works fine, until you try to
use a 1.44 disk, then it errors out. I have since replaced it with a 720
drive, and no longer have the problem. Of course a 1.44 drive could be
modified to at least make the electronics THINK the high-density sensor is
seeing a 720 disk...

You could call them first, but that would require that you could trust that the person on the other end was intelligent enough to be familiar with the products they sell. <grin>

Aside from that, several mailorder dealers sell these devices, including the Instant TV box, the one I mentioned as being sold at Best Buy. If you need a mailorder source, let me know.

From: rsg0910@iglou1.iglou.com
Message-ID: <EJGpJ2.FDC@iglou.com>
Source record: 68823

I just came across two 1050s that were modified, and I'm not sure what sort of modification it is. On the front of the case, are two switches, and an LED. One is a two-position, and the other is a 3-position. Inside, the wiring from the switches lead to a small blue circuit board in the back, behind the mech. This has wiring to the other connections in back, as well as places under the mech.

On this little blue circuit board are three connectors, with two chips between them, and "1986 CCP" printed on it.

I've not yet plugged it in, but I'd like to know what exactly it is before I use it.

MAke them 1-bit GIF files.These can be viewed in GR.8 via JVIEW or AT8GIF.
(GR.8=320x200)
JVIEW allows you to view any size of a GIF by selecting a 320x200 section
of the pictures.IT also lets you zoom in.So a 640x400 pictures would be
halved verticaly and horizontaly to fit in 320x200 but the user could tell
JVIEW not to "zoom out" and he could choose which 320x200 area to view.
So the moral is to not worry about the dimensions of the GIF file.
(but keep the size under 90k)

Of course my De Re Atari is in B&W.You might make some pictures colour.
(maybe Koala pictures,which are compressed,for some of the screen shots)

: I've been doing some PBI research, and I think it might be possible to
: make a PBI ethernet interface assuming we could get together the proper
: hardware + drivers.

: We could even make it network bootable with BOOTP and TFTP :P~~

Sounds good! I'd be willing to donate network time and even some
equipment. I have a 128kb dedicated leased-line connection to the
Internet from my home (via router and Adtran 128k bonded modem)

In this article,USD is a reference to "US Doubler 1050".

Steven J. Tucker (ai123@FreeNet.Carleton.CA) wrote:

: (dklugh@iwaynet.net) writes:
: > I just noticed that Bill says not to write-protect the disk and APE was bitching
: > about trying to use a un-registered feature in the SIO command-frame log so I
: > switched APE to 2X speed to be able to write.
: > (which has "USDoubler" next to it even thought the USD 1050s runs at (nearly)
: > 3 times the speed of normal 1050s)

: If your so upset about the 'bitching' why not register it instead of stealing
: it? By your own posts youve used up your 30 day trial period about
: 50 times.

Irrelevant.I was trying to warn people so they wouldn't be confused when
they always had to start over again at level 5.

: And as you've been told on many occasions, because a USD drive
: spends most of its time seeking it never even gets to 2x, except on LONG
: sustaned reads, on a specially formatted diskette, w/o much seeking or
: non-sequential sector reads. (read: almost never).

Actually the only thing I remember you saying was that you DIDN'T say that
APE ran 50% faster than the USD.(it says that it does in your manual)

Since most people are just using it to load games there would be little
seeking as everything DOS needs is at the end of each sector.
(it would be important to have the files contigous)
It may be that you use SpartaDOS which uses seperate FAT ("sector map")
sectors.

Your statement (in the APE speed-changing menu and et cetera) is confusing
as it seemingly indicates that a USD actually transfers data at 38400 baud.

It would be nice if someone with a USD1050 (and not any other kind of 1050)
would test it against a APE disk image.
(it's important to use the same sector size)

: > Remember that the PC-Mirror can't write at ANY speed!

And if you use the PC Mirror file-loader it functions at 19200 baud.

: Thats right, stealing has its penalities. I look forward to you bitching
: about more free products in the future. Perhaps you could do some
: more critical reviews of the free cpu emulators for us?

Irrelevant.

"cpu emulators"?
I have some information about Atari HCS emulators.
I would sugest a combination of XL-IT (compatible and slow) with PC
Xformer (fast but in-compatible).
PC Xformer is useful for using Atari file & disk processing programmes on
disk images at hard disk speeds.

I'm pretty sure that trackballs return binary (via the PIA ports),not
analogue.I think that they work similar to "steering controllers".

3334. Auction - 8-bit Games, MAC/65, Assembler, Koala Pad

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-11 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971111124501.HAA12018@ladder02.news.aol.com>
Source record: 68831

Everything Auction - Update 8

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing. Actual shipping added. -$15 classicgmr

Atari Home Computers
A1. Koala Pad. Includes Koala Pad touch table, stylus, Micro Illustrator Owners Manual, and Touch Table Owners Manual. Plugs into controller port 1. Very rare. Disks not included. -$9.95 min
A2. MAC/65 with DDT Macro Assembler and Editor Program for Atari Computers. (c) 1984. Bright orange cartridge. Includes manuals in bright yellow binder. -$20 mbowen
A3. Pengo cartridge. Complete in box with instructions. -$3.95 dperw
A4. Mr Do! Disk. Atari Computers one side/Commodore 64 flip side. -$1.95 min

So how exactly do you get into the games that are in those huge .atr's?
They have heaps of stuff, but when you try to load it on up it just says
"Boot error". Do I need MyDos or something here?

Best

For "pure" trackball control where you can use 'TB' instead of 'JS', so
far I only know about Missle Command. Press Control-T at the title screen
and it'll blink. This makes it much more better than the joystick mode.

But side-scrolling shoot ups like Space Invaders are great with the
trackball even in JS mode. In Gyruss, I spin the ball around the edges
the same way the ship moves and scores go up. Heck, even Defender is
better with the trackball.

Still, it would be nice to play such games in TB mode. That's where 5200
versions have such an advanatge...

right! So how can I say Centipede to use a trackball??

3340. AMP Instructions?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-12 00:00:00 UTC
From: gozargozar@kenton.com
Message-ID: <6ula0Q9wpDtS092yn@kenton.com>

I downloaded AMP, and have been slowly figuring out how to use it, but
it would be nice to have directions. I'm hoping to be able to use it
in my music classroom.

The author: William G. M. Leslie III. , or so my uncle used to say constantly as he called him for help. Omnitrend software. I played it, but never found the hyperspace booster although my uncle did. There is a dude here in c.s.a.8 that wants a review of it, so I am preparing it. It's taking a while, but I'm on it.

3345. Glactic Trader

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-12 00:00:00 UTC
From: thorin@tamu.edu
Message-ID: <64bgiv$2l4$1@news.tamu.edu>
Source record: 68770

I remember a game I used to load up from a tape and play on an Atari 400 when I was rather young (around 5, 1982) whose name was, I think, Galactic Trader. Basically, it was mostly text based, with colored frames and boxes. You had stuff like x amount of fuel and you bought and sold stuff at different planets, trying not to run out of fuel or money. I think it was written in basic, because, I remember exiting out of the game and changing the text to say different things. Anyone remeber this game, or know if it is avaliable in an atr format?

On a side note. I picked up an Atari 2600 (okay so this is the wrong newsgroup but I figured I could ask here since I'm already writing a message) and it appears that only half the games work. Pacman and Defender work fine, but games like combat and The Empire Strikes Back come up, but the joystick will not work. One of these had a label of viba(?sp?) on it. Anyone know if this is a hardware problem, or an easy way to fix it? Thanks, I hope someone can help.

The Antic Music Processor is not a commercial program. It appeared on
the cover disks of Antic Magazine way back when. You should be able
to find it using an FTP search site. Try going to www.filez.com and
searching for AMP with program type set to "Atari". AMP 2.1 was the
latest version, circa June 1990.

Did you try that Gorf cart on an XL or XE? If so, that's the problem.
Gorf (and some of the CBS titles) only run on the old OS because of some
direct OS calls ("illegal" calls as Atari puts it). That's one reason I
still have my old 800.

The town where I grew up (Murray City, Ohio) also used an Atari 130XE for
their cable info channel for a number of years before it crapped out and
the parent cable company replaced it with a Pee Cee. I tried to help save
it (my mother was responsible for updating the information), but that's
hard to do from Orlando.

3349. WTB: Micro Mainframe Disk Drive

That reminds me ... is there some way to pass-through the cartridge with a
translator disk? There has to be a way to play these carts on an XL/XE,
maybe with a piggyback cart, as you can with XL/XE translators on floppy.

Everything Auction - Update 9

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing (but not box shell). Actual shipping added. -$15 classicgmr

Sorry I can't help you on this one, Curt.

But didn't Micro MainFrame also run ads for a hardware hack that was
supposed to be able to let any 6502 machine run software designed for any
other 6502 machine? I don't think the product every came to market, but
the ads were full-page, color, and appeared in some of the slicks of the
time.

3353. Magazines for sale

Newsgroup: comp.sys.atari.8bit

USA only. Teknika MJ-10 video monitor (13" display) with seperated and regular composite video, built-in speaker (volume control on front). Great for 8-bit computer or VCR use. Best offer by midnight (Eastern time) November 30th, 1997 takes it. UPS shipping will be $25 on top of offer.

Offers, questions, update, etc., email to: SunSage@aol.com

3357. Fill Command

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-13 00:00:00 UTC
From: odaman@pfu.co.jp
Message-ID: <64dlai$e07$1@netnewsa.pfu.co.jp>
Source record: 68691

Hi,

I would like to know how to fill the screen in ATARI-BASIC, can
someone let me know?

I read some documentation(FAQs, AtariRefManual, and so on), and
I knew XIO 18,#6,0,0,"S:" will fill the screen.

I tried it yesterday but nothing happened. What is this command?
Or must I clear the video ram with POKE command? :)

Thanx!

You can get the instructions for AMP on my homepage:
http://www.geocities.com/SoHo/1354/atari.htm. The AMP ZIP file
contains the instructions that appeared with the program in Antic
Magazine.

Hope this helps

That depends on the mech. On some, it's a small mechanical microswitch
(pushbutton), and some of these are stiff enough to push right through the
tape. This is exactly what I came up against.

3363. Re: DE RE ATARI - Read me

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-13 00:00:00 UTC
From: kenneth@spam.not.sayeth.i
Message-ID: <346af53e.418150046@news.aatech.com>
Source record: 68697

Appendix A follows.

Same guidelines. I proofread it, but since I
typed it in, I'm least likely to catch any
problems.

The whole thing is word wrapped at character 65.
No program listings or illustrations.

This is a very short chapter about memory utilization
on the 8-bits. As I recall when I first read it some
14 years ago it was the most terribly depressing
chapter on Atari programming I ever read. It made
doing any meaningful assembly language programming
sound impossible.

3364. Auction - 5200 Bounty Bob, Atari 8-Bit

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-13 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971113124500.HAA26069@ladder02.news.aol.com>
Source record: 68698

Everything Auction - Update 10

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems

That was how the 1450XL has the boards for the drive and modem, and the
modem board for the 1400XL, correct?

I liked the way they made the 1450XLD all one board. I noticed, compared
to the 1400XL, that the 1450XLD uses no PAL chips.

Also, comparing the 1450XL's to the TONG 1450XLD, the disk drive
microcontroller's
are different. The daughter board 1450XL uses a microcontroller that has
a chip socket on top of it with a EPROM in it. My tong 1450 uses a Intel
8040AHL,
that has MC written on it. Do you know if the 8040 has a internal
programmed ROM?
And if it does, can it be read?

> I have no knowledge of 1450 cases ever being smashed, nor any

Sounds familar? Can we say, MACINTOSH!

I remember when I use to work a Marriott's Great America in Santa Clara
seeing in Atari arcade inside the park (New Orleans square). Anyway,
there was a computer motherboard inside a plexiglass case that had
a neon light in the shape of lips. This board was controlling the which
neon lights were on while the machine talked. Is there a chance that
this was a 1400XL doing that?

I was also told of a application some made for the 1400XL to turn it into
a answering machine. The computer would answer the phone, the voice
synth would relay a message, then the cassette recorder would record
the message being left. Confirm, yes/no?

> Some of the proto IC's that have appeared in some Tong 1450's were

>

If you could Jerry, can you possibly explain the two 40 pin ICs that are on
my Tong board? One has a big letter C on it's cover (U43) and the other a
big
B1 (U44). On mine, the voice has never worked.

A guy I talked to some years ago in Benecia, CA told me that those chips
were language chips for the voice synthesizer. Can you confirm if this is
correct?

One last one, what was TONG suppose to mean?

Sorry for all the questions. As I've been staring at the schematics and
boards
for all these years, I've been pondering on some of the designs that were
used
on these machines. Lot's of questions. Thank you for coming out to give
us
insight to your time from then.

The XIO command for "fill" is for filling partial areas of the screen. I'm sure someone will explain it. But you might be looking for just a way to clear the screen. If so, then if in the normal 40 column text screen (graphics 0), just PRINT CHR$(125); and if in a graphics screen, use PRINT #6;CHR$(125); because ATARI BASIC via the OS uses #6 when creating its graphics screens. I know it's weird to send a text character to a graphics screen, but it works. And remember that if you want a different color to fill the screen, you can use SETCOLOR to change the background color register.

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or
keep track of your Mailing/Shipping address. To expedite your order,
include your Mailing/Shipping address and it wouldn't hurt to include
your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff
that needs work you can have some ***FREE*** Atari stuff for the cost
of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard
Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some
thing you've been looking for, Something you might want & something New
to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml.
And Jump to my FTP site linked to my Web Site so you can Download Free
Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's no inconvenience. I do ask that you specify Atari
8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not
Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

>unless there is a seperate Slip/PPP handler in place. He
>prefers the modular approach, and I tend to concur. What

So do I.But you can just telnet to a IRC programme.
Check out my HTTP site in the links/server.html file for the IP.
(how to get there should be obvious from my FROM: header)
Telnet would give you a wealth of features.But from what I heard SLIP would be
hard enough to implement in 48k,let alone PPP.
While Lynx could be telneted to for FTP it doesn't seem to work with every FTP
site.(at least 2.5 doesn't)

>possible advantage could be gained by having TCP/IP code inside
>every Net app that would be written? He would be writing in

I would like to see it implemented as a R: handler.Then every term programme
would be a telnet programme as well with built-in terminal emulator.
Actually the R: SLIP handler would be the telnet programme.
You'd probably have to also have a DNS
(Domian Name Server;a Internet IP telephone book of sorts)
to look up IP addresses to pass to the R: AT command.

And no concurrent mode nonsense.
(Why doesn't the 850 R: handler simply enter concurrent mode whenever opened
for read?)

>Action, remember. What is the specifications for an SDX
>DEVICE? That would be interesting if both TCP/IP and a CD-ROM
>driver could be written as such DEVICEs.

I would avoid SpartaDOS X since it breaks some (many?) programmes.
And the handler would probably take up the OS shadow RAM to leave enough memory
for a term programme to work.And SDX only has room enough for two more device
handlers to load. (and a slot reserved for a COM: device for a total of three)
The CIO lets you have more devices than SDX.

And for the obvious reason that not many people have SDX.

Well you can only post with LFs.That's what UNIX uses.
You can download with Z-modem or Kermit and use their text-translation
capabilities to translate UNIX (Amiga) files to whatever your computer uses.

If you're actually running the FTP programme on your computer then setting the
type to "A" should cause FTP to write the files out as the kind that your
system uses.(type "ascii")

I know all that.I was just saying that it NEVER returns paddle (analogue) data.
You can keep moving it in one direction.
(like a "steering controller",unlike a paddle)

>Any suggestions or help is appreciated.

I need to know where you got them to help.Are they DCM files?

Lynx can't download DCM files via FTP.They get corupted.
When doing FTP,always use RETURN in Lynx to download.If it just views it then
you know it wasn't meant to be.You might try telneting to a new version of
Lynx.Check out the links/server.html file on my "web page".
(It's at the obvious address)
Once you're using Lynx 2.7.1,you can try typing the complete URL to the file
and append ";type=I" to it.This might work for earlier (but after 2.5)
versions.Check the Lynx help files for more details.

I talk about Lynx so much I'm going to have to write a FAQ.

FTP Gopher gateways will also be unable to transfer DCM files.
(that is,FTPing via Gopher)
I remember for the longest time not being able to download JPEG (.JPG) files
for the longest time for this reason.Why binary isn't the default is beyond me.
Especially when a simple BASIC (but slow) programme can convert text files.
(or SDVert on the Atari,TT on the PC)

>I guess this should really be split up into two projects:
>1) a TCP/IP layer, with calls like bind(), socket(), recv(), send(),
>etc.

Well socket() would be the OPEN CIO command.recv() and send() would be GET and PUT.You could asign a secondary channel to the socket via another OPEN.While this would limit you to 3 or 4 sockets at a time,you might be limited to that by the limits of RAM dedicated to buffers.Otherwise AUX3
(or some other out-of-the-way AUX byte) could be used to indicate OOB data.
Bind() would also be part of the OPEN command,with a option for no port#.
Bind() would imply listen().I don't know about allocating memory for listen queues.Probably XIOs to do bind() and listen() if you'd ever want to bind() but not listen() for some reason.(I've never programmed sockets before)

Of course this is all assuming stream sockets.You'd need them for telnet and FTP,I suppose.There are also connectionless sockets (used for tftp).
You have to specify a IP every time you write to them.(hence send() & recv())
And other kinds as well.

>2) a hardware layer, which would either be a serial<->PPP driver,
>or a ethernet driver.

Well remember that you can't make it TOO complex.It may not be possible to make it like Linux.(I don't know ANYTHING about PPP)
And I wouldn't even dream of a HTML reader via SLIP or PPP.
I'd reach for telnet and FTP.(and a FTP-like HTTP programme)
Remember that only 130XEs have 128k of RAM.But who the hell wants to use a XE!

>Anyone familiar with ethernet chipsets (i.e. the 8390)?
>Anyone familiar enough with hardware to give me a crash course in
>how to set up a PBI device to memory map this in to the 8-bit under
>the proper circumstances?

Well it would be nice if Bob Puff put up information about his experiences with the Black Box.The same with ICD/FTe and their MIO.

>way it is set up. Now if I can get Bob Puff to make more

I liked the BB better.You had 96 partitions and could swap them at any momment.
I just wish it had better support for 128-byte sector partitions.
(as it is,it just wastes the second half of each sector)
But the sector copier was always buggy.

>Floppy Boards, and upgrade the BB ROMS to use larger
>partitions, as I know where I can get a 4G SCSI drive for $200!
>Now wouldn't _FOUR_GIGABYTES_ be cool on at Atari 8-bit System?
>Of course, broken up into the Black Box's 96 partitions...

IS there a DOS that works with more than 65535 sectors (16MB)?
You could just use multiple drives.From reading my BB manual it seems that you
can have multiple controllers.And each controller can have 7 devices.
(a "dual" drive counts as one device.Like some removeable hard disk drives)

De Re Atari: A Guide To Effective Programming

Appendix A

MEMORY UTILIZATION

Memory utilization with the Atari Home Computer can be difficult. Much of the memory is commandeered by the operating system, the resident cartridge, or the DOS, leaving very little under the direct control of the programmer. This gives the programmer very little freedom in laying out memory utilization for a program. With proper planning this need not be a serious problem.

PAGE ZERO

The most important RAM for any assembly language programmer is page zero. Page zero is absolutely essential for pointers and is very useful for heavily used variables, because code written for page zero variables is more compact and runs faster. Hence the assembly language programmer wants to know how many locations on page zero can be stolen for his own use. This appendix will not cover the use of page zero locations as they are defined and used by firmware. Instead, it will address only their use when the firmware's function is disabled or ignored.

The lower half of page zero (addresses $00-$80) is reserved for use by the operating system. The 128 bytes here are required for the entire array of services that the operating system provides. Most programs will use only a portion of those services. Thus, many locations in this region will not be used by the operating system during the program's execution. In particular, the 43 bytes from $50 to $7A are used only by the screen editor and display handler. Most programs will use custom display lists with their own display handlers. These 43 bytes would then become available during program execution. Similar reasoning applied to other locations dedicated to special functions would free even more.

Unfortunately, there is a major flaw in this reasoning. The software department at Atari is constantly evaluating the performance of the operating system and making changes in the code. There are now two versions of the operating system -- Rev A and Rev B. They are functionally almost identical; software that runs under Rev A will almost certainly run under Rev B. More revisions are contemplated and it is highly probable that

the under utilization of those 43 bytes will be corrected in future revisions of the operating system. Thus, any software packages that steal those 43 bytes, or any other bytes from the lower half of page zero, will probably malfunction if run under a future operating system. Therefore, commercially offered software should not steal any bytes from the lower half of page zero.

The programmer must look to the upper half of page zero for free bytes. These 128 bytes are reserved for use by the cartridge. If no cartridge is in place, they are free. If a cartridge is in place, some bytes will be reserved for the programmer. The BASIC cartridge leaves only 7 bytes for the use of the programmer -- $CB through $D1. The programmer who must have more page zero bytes has only one option: the bytes used by the floating point package ($D4 to $FF). These 44 bytes may be taken if the floating point package is not used by the programmer's routines and if those routines do not themselves call the floating point package. The programmer does not have unlimited use of these bytes; they must not be used by any interrupt routines, as such routines might strike during a floating point operation called by BASIC. There are no other bytes on the upper half of page zero usable by the programmer.

The programmer working in the BASIC environment is seldom interested in the high performance and compactness that page zero offers; after all, if high speed and compactness were primary concerns, the programmer would not have chosen BASIC as a delivery language. The programmer most interested in large amounts of page zero is the assembly language programmer. A pure assembly language program does not need any cartridge installed to run; therefore it should have access to all 128 bytes of the upper half of page zero. In practice this is not quite so simple, for an assembly language program must be debugged, and the only convenient way to do this at present is with the debugger in the Atari Assembler-Editor cartridge. Assembly language programmers will note with chagrin that this cartridge only reserves 32 bytes for their own use. While this is entirely adequate for virtually any program it is not enough to sate the appetite of a high-performance program. There are 30 more bytes that are not used by the debugger portion of the cartridge. These are: $A4, $A5, $AD, $AE, $DB through $E5, $EA through $F1, $F5, $F6, $F9 through $FB, $FE, and $FF. If these bytes are used the programmer must not return to the Editor or the Assembler or bad things may happen. Furthermore, the mini-assembler inside the debugger must not be used.

If you use other cartridges or disk based languages, you are on your own. Many of these systems use even more of page zero.

ABSOLUTE RAM

Another problem the programmer faces is presented by the DOS. It is very desirable to write programs that run on either 16K cassette systems or 48K diskette systems. Unfortunately, such systems have very little free RAM in common, for the DOS and DUP would almost fill the RAM of the 16K system. There are several solutions to this problem. One is to produce two different versions of the code, a disk version and a cassette version. The two programs would be orged to different locations. This means that customers who buy the cassette version will not be able to transport it to a diskette if they upgrade their systems.

There is another way. Page six is common free RAM for all systems. Variables and vectors can be placed on page six and used by cassette-based software or diskette-based software. A directory of routine addresses can be computed and placed at run-time onto page six. Machine language routines can then jump through the page six directory to the routines elsewhere in RAM. The technique can be difficult to execute; it is not recommended for large assembly language projects. Its greatest value is with medium-size machine language routines (about 1K-2K) embedded inside BASIC programs.

: Yaaaaay! Let's run through it all again, shall we?
:
: I think the problem of relevence is that there are currently a lot of
: group on this list who'll see G-OS turn from a multi-format, erm, format,
: into something that'll drop the lower-end machines and use the
: capabilities of the higher ones only, unless all you Amiga owners will be
: happy to have your machine reduced to a Speccy.

Simon's correct, in a way. Just look at the way HTML and its bastard
extensions fathered by Microsoft and Netscape have developed for web
browsers. Thank Grud fer Lynx 2.2 is all I can say :)

Seriously though, I don't think there'd be too much of a problem, since
even if some platform dependant extensions were developed, most developers
would prefer using the machine in native modes anyway rather than
passing their code through GENOS. Sort of like killing Amiga OS to run
game code faster. Or bypassing C64 kernal routines.

Perhaps GENOS will be best for creating those little apps that you only
realise you need after you find them. Like Winning Lottery Number Pickers,
Sine Table Generators, Adventure Games, Artificial Intelligence stuff, Maths
function plotters, Biorythm thingies, etcetera, ad nauseum.

Source record: 68714

Hello,

Just looking for some reassurance here. I stopped by a local thrift store today, on a whim, and picked up an assortment of 8bit stuff (800XL, bunches o' cables, couple of joysticks, some game carts). Anyway, I found a 1050 drive, no cables, & what I think is a suitable power-supply. When I plugged an SIO cable or the power supply into the back, the circuit board inside to which those connections are soldered to moved a little. The drive was 8 bucks, and the putative power supply was 3. One of the SIO ports was filled with cobwebs (or something like them, not really sure).

Something inside me said not to buy the drive. On the one hand, I am really itching to boot up some 8bit stuff (I've got two drives that I know should work on the way, but aren't here yet). I know it was only $11-12, but I honestly didn't want to have the thing sitting around if it didn't work, and certainly didn't want to put more money into it to make it right again.

(Out of curiosity, are there places around today where I could take one of these drives and get it realigned/working again for a reasonable price?)

Anyway, did I do the right thing in trusting my gut and not buying the drive? How fragile are the 1050s anyway? I can only imagine what kind of abuse the thing might have gotten to eventually end up on the shelf of the thrift store, with cobwebs no less. Plus the moving circuit board. Or should I stop being a cheap-skate and go buy the thing and get it fixed (if that's possible)? The store has an all-sales-final policy.

Thanks,
Jay

Dear All, I am still desperately seeking 'Lone Raider'. Several of you thought I meant 'Lode Runner', which came out much later. (many thanks for all the replies about that) No, this was an old, old game, that was supplied when you bought the Atari 400 or 800XL. You got 'Lone Raider' and an educational type thing called 'European Countries and Capitals', and 'An Introduction To Basic' , among others, on red audio tapes. It must have been around 1985 or so. I have even taken to scrambling around the grubby old baskets on the floor at car boot sales, just to prove to myself that I am not completely insane. Or maybe that DOES prove I am completely insane. Either way, this has become an almost religious quest. I know, I should get out more, get a life etc, but I am not ready to join the Windows 95 worshippers yet, not when I know Lone Raider is out there somewhere. Atari lovers everywhere, I implore you, search your attics and find 'Lone Raider'!

(then please e-mail me at: amsant@globalnet.co.uk)

Cheers, Ange

You can try Telegames (http://www.telegames.com) or B&C ComputerVisions
(http://www.myatari.com). Telegames has some stuff, but B&C has a lot
still available, and they sure can use the business.

If you needed to use a XL/XE, getting a ROM board that would allow you
to have the old 400/800 OS along with other O.S.'s would work also. Then
you could
have the best of both worlds.

3385. Has anyone notice 'Don't Fear's' Nov 10th Auction is not at Nov 14th?

Well the best one I found was xl 0.20. It has sound plays most
games (I can't get Carverns of Mars, Jumpman's, or Mountian king to work
though) has an easy to use graphic interface, it runs find on a
486/100, plus it has joystick support. Anyway I used to use pokey until
I found xl 0.20 a few weeks ago, the sound is great, the collison support
and colors all seem to work pretty well so give it a try. I got it at
http://www.members.aol/~...uhmm..hmm it was something like petersen? Hmm
can't seem to find it in Deja News for some reason, oh well it appears to
also be here:

http://ourworld.compuserve.com/homepages/ken_siders/atari.htm

Anyway that's my best emulator choice :)

I have the following stuff for sale. I'd
prefer to sell all at once.

Qty Item
--- ----
1 1200XL Computer - two keys broke off
(I still have the keys, so you can glue them on)
4 1050 Disk Drives
2 410 Cassette Drives
1 Xetec Graphix AT Printer Interface
1 Supra MPP Printer Interface
1 ICD P/R Connection
1 BASIC Cartridge
1 Star Raiders Cartridge
1 AtariWriter Cartridge
1 Music Composer Cartridge
2 Atari BASIC Manuals
1 Atari BASIC Book

Please include shipping costs in all offers.

All of this stuff was given to me, and I have
not tested it. I was told it all worked. I
offer no guarantees (sorry).

Thanks.

3391. XDIRLIST and DIR2ATR

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-14 00:00:00 UTC
From: stack@xs4all.nl
Message-ID: <346b97cb.23256963@news.xs4all.nl>
Source record: 68717

Hi,

just wanted to let you all know that I've just updated my web site.
I've added 2 new pc utilities for our Atari 8 bit.

XDIRLIST retrieves all 8 bit files from Atari 8 bit pc disk images
and lists them out to pc file, which can be imported
into MS Excel or MS Access.

DIR2ATR collects all files from a specified pc directory,
and turns them into Atari 8 bit pc disk images.
You can add automatically DOS 2.5 or MYDOS.
If it won't fit on one disk image, it will create multiple ones.

The Turbo Assembler source can also be found on my Web page.

Point your favorite browser to

http://www.xs4all.nl/~stack/atarixle.html

or

http://www.xs4all.nl/~stack for my homepage.

Let me know what you think about those 2 programs...

Bo.

>Subject: Fill Command
From: odaman@pfu.co.jp (OdaMan t2o-MaNiaC)
Date: 13 Nov 1997 01:32:02 GMT

Hi,

I would like to know how to fill the screen in
>ATARI-BASIC, can
someone let me know?

I read some documentation(FAQs,
>AtariRefManual, and so on), and
I knew XIO 18,#6,0,0,"S:" will fill the
>screen.

I tried it yesterday but nothing happened. What is this command?
Or
>must I clear the video ram with POKE command? :)

Thanx!
--
Tetsuo Oda

An excerpt from "Atari 400/800 Basic Reference Manual" Pg. 54
Xio (X.) - Special fill application

Format: Xio 18,#aexp, aexp1, aexp2, filespec
Example: 100 XIO 18,#6,0,0,"S:"

This special application of the XIO statment fills an area on the
screen between plotted points and lines with a non-zero color value. Dummy
variables (0) are used for aexp1 and aexp2.

The following steps illustrate the fill process:

1. Plot bottom right corner (Point 1).
2. DRAWTO upper right corner (Point 2). This outlines the right edge of
the area to
be filled.
3. DRAWTO upper left corner (Point 3).
4. POSITION cursor at lower left corner (Point 4).
5. POKE address 765 with the fill color data (1, 2, or 3).
6. This method is used to fill each horizontal line from top to bottom of the
specified area. The fill starts at the left and proceeds across the
line to the
right untill it reaches a pixel which contains non-zero data (Will
wrap around

if necessary). This means that fill cannot be used to change an
area which
has been filled in with a non-zero value, as the fill will stop.
The fill command
will go into an inifinite loop if a fill with zero (0) data is
attempted on a line
which has no non-zero pixels.

[Break], or [System Reset] can be used to stop the fill if this happens.

The following program creates a shape and fills it with a data (Color) of 3.
Note that the XIO command draws in the lines of the left and bottom of
the figure.

```
10 Graphics 5+16, Rem (gr.21)
20 Color 3
30 Plot 70,45
40 Drawto 50,10
50 Drawto 30,10
60 Position 10,45
70 Poke 765,3
80 Xio 18,#6,0,0,"S:"
90 Goto 90
```

End of excerpt.

Although this example start with the lower right corner working counter
clockwise.
You can start at any point using 2 Drawto statments then the Postion statement,
in either clockwise, or counter clockwise motion to achieve these results.

3393. Clean Out The Basement Auction Upd#2 26/52/78/8bit/Int/Odd/F/Sin

Clean out the Basement Auction

Update #2 8pm 11/13

Remove NOSPAM to reply:

ie. ibaronof@midway.uchicago.edu

The point is to get rid of this stuff quick.- buyouts accepted- trades
preffered (wants list available)- and
I will go long. Any bid can be cancelled, any item withdrawn anytime.
Make an offer- volume discount
definitely available.

Auction will take 1 week + 3 days going-going-gone phase.

Buyer pays shipping. $1 for first cart, $0.50 each cart thereafter
(first class US postage, postage tried
and true- less for big orders). More for systems, and boxed stuff.

Lets try to keep it to a $5 minimum total order.

Atari 2600
Atari Krull min bid $1

Atari basic programming (text label) min bid $1

Atari Human Cannonball box/inst only (flap tear) wombat2 $1

Atari Star Raiders box, controller, overlay, instructions min bid $2

Atari Fireworld bi only (flap tear) wombat2 $1

capabilities of the higher ones only, unless all you Amiga owners will be
> happy to have your machine reduced to a Speccy.
>
> Simon Forrester http://www.futurenet.com sforrester@futurenet.com

If the topic does interest you, try joining the SPAM-FREE mailing list
(details are at http://www.alphalink.com.au/~zhulien/GENOS.htm).

You will then see how relavent it may be - we have many subscribers
who own MSX, Amiga, CPC, C64, 80x86 etc... The OS will be portable
and scalable. If you think about it, speed is the only reason that
Windows 95 isn't useful on a C64 with 1GB harddrive and 16MB SupraRAM
expansion.

Regards

Julian Cassin

3396. Re: Has anyone notice 'Don't Fear's' Nov 10th Auction is not at Nov 14th?

If a lot is at G2, and then somebody tops it, the lot then goes back to G1. This process can be repeated several times, as many bidders wait until the very end of an auction to place their bids.

Source record: 68724

Hello,

Can anyone point me to a reliable source that might still tackle 8 bit repairs? I picked up an 800XL at a thrift store yesterday, and when I booted it up, the MEMORY TEST came up, with three or four red squares under the RAM test. Any idea what this might be, how it might be fixed, and where I could send the thing to get it fixed (and cost if you've got any idea)?

Thanks,
Jay

Everything Auction - Update 11

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing (but not box shell). Actual shipping added. -$22 bassinl

The problem is that the registered version was removed
from the market (I believe due to copyright issues). Only
the shareware version is freely available.

I have the registered version. It has levels from both Jumpman
and Jumpman Jr, and an editor to make your own screens.

Also, you should try Ultimate Wizard on the C64 (hmmm, can I
say C64 in an Atari group? :-) You can get UW and a C64
emulator from the net. UW plays like a Jumpman-plus. It's
my favorite game of all time.

: What's your point? November 10th is November 10th, isn't it? I think the
: dubious word here is 'enter'. This, given what you say, could go on
: forever!

Umm...that's the way 90% of the auctions work. You run it for a
week or so to make sure everyone gets a chance to see it, and then you
enter the G1/G2/Sold phase. He said it would enter that phase on the
10th, and it did. Most of the items were marked Sold on the 12th - those
that weren't Sold had gotten new bids, and thus went back to G1. It is
possible that an auction like this could go on indefinitely, provided new
bids continue to roll in, but that just doesn't happen.

Don't go getting all excited about this - this is how the majority
of auctions are run. Get used to it.

> Who has already upgraded?

Did this upgrade as published on the net (look around on the web) a
few years ago. Modified it to three POKEYs using the extra 2:4
decoder on the 2:4 decoder chip require by the multiple PIA upgrade I
did at about the same time. It worked fine BUT I had so much trouble
getting the sound out to a stereo amp without creating a ground loop
(and horrible 60 hz hum) that I ended just tying the outputs together
and leaving it as a multiple-voice upgrade.

Introduction
------------

Advertising on Usenet is a frequently misunderstood subject. The purpose
of this message is to explain some Usenet conventions regarding
advertising to new users and, hopefully, spare everyone involved a lot of
needless worry.
```

To start with, let's define the term. "Usenet" is *not* synonymous with "Internet." Usenet is the system of online discussion groups, called "newsgroups," e.g. rec.humor, comp.misc, news.announce.newusers, talk.origins, misc.rural, alt.sex, and so forth.

This FAQ does not attempt to describe in detail all the various ways in which one can conduct commercial activity over the Internet and attempts simply to explain the issues involved in advertising in Usenet newsgroups.

The philosophy of Usenet

Usenet started out in 1980 as a UNIX network linking sites which needed to talk about and receive prompt updates on UNIX system configuration and other UNIX questions. Message traffic started out at a few messages per week, but the system was so useful that traffic quickly boomed and Usenet almost immediately expanded to include forums on science fiction, humans and computers, and other subjects.

In the beginning, Usenet was largely confined to educational institutions such as universities and colleges, and to research companies and other commercial enterprises with UNIX machines on-site. It has now grown to include millions of users at commercial sites such as America Online and at companies around the world involved in every sort of business imaginable. Nevertheless, many of the customs found on Usenet today have their origins in the days when Usenet was very small and most Usenet sites were universities.

That these customs and traditions began when Usenet was much smaller and quite different in nature in no way lessens the anger many users feel when these customs and traditions are violated.

One such custom is the tradition and belief that it is rude to advertise for profit in Usenet newsgroups.

Advertising is widely seen as an 'off-topic' intrusion into the discussions of any particular newsgroup (newsgroup is the Usenet word for discussion group or bulletin board). Each newsgroup has a specific set of subjects it is intended to cover, and in order for newsgroups to function as effective discussion forums, it is important that people stay 'on-topic'. If everyone disregarded the particular topics each newsgroup is intended to cover and simply posted whatever they wanted wherever they want, the entire system would break down.

Due to the decentralized nature of Usenet, there is no one person or body which can "enforce" the custom of staying on-topic. It falls on each user to help preserve the culture of open discussion and free speech that Usenet has come to embody by not posting off-topic material.

This, of course, includes advertising. Advertising is by far the most pervasive form of off-topic posting, and therefore, gets most of the heat.

An analogy

If an analogy will help you to visualize the situation, imagine a meeting at your workplace or school.

At this meeting, people are discussing a certain issue -- for example, getting new sidewalks installed downtown or getting new schoolbooks for the elementary school, or what to do about the new product your company is planning on introducing.

In the midst of the discussions on the new sidewalks or textbooks or product, someone walks into the room, interrupts everyone, then reads an advertisement for a local restaurant. He or she then leaves without waiting for comment.

Now imagine if this happened over and over again each time your group tried to hold a meeting. Every time someone tried to make a point, in walks some other stranger who reads an ad for some business that has nothing to do with the subject of the meeting.

It would soon become rather difficult to hold effective meetings, wouldn't it?

Similarly, it's very difficult to keep Usenet newsgroups interesting and useful when people deluge newsgroups with advertisements.

The hidden cost

One of the things that attracts some people to the idea of advertising via Usenet is that it costs so little to do it. You pay $20 or $30 per month for an Internet account, and you can post literally *millions* of advertisements at no additional cost.

But there *is* a cost. Each message you post takes up disk space on each site around the world where it lands. People don't much mind paying for disk space to hold Usenet discussions since they know that people like taking part in those discussions and since they know that it's sort of like mutual backscratching: "I let your messages reside on my site for free, and you let the messages I post reside on your site for free." Everyone benefits from interesting, informative, or amusing discussions, so no one really minds paying for the space.

But there's only one person who benefits from advertising: the advertiser. Sure, you can say that the people who see the ad benefit from the product or service advertised, but when you balance that against what they lose when their favorite discussion group is taken over by non-stop advertising, it's a poor trade.

No one wants to give their disk space for free to someone who selfishly posts a copy of an advertisement to every newsgroup on Usenet.

How to advertise on Usenet

There *are* acceptable ways to advertise in Usenet newsgroups.

1. The on-topic notice

If you have a product or a message that is specifically related to a particular Usenet newsgroup, and you want to let people know about it, it's *usually* all right to post *one* notice about it.

Note the word "notice." A notice is a brief mention of the product with information about how interested persons can find out more. It's not a sales pitch. It's not an advertisement. It's not a "BUY BUY BUY" sort of message. It's a notice.

You are encouraged to make such postings one-time-only. When your polite informational notice starts getting posted every week, people are going to start getting irked at you.

You are also *strongly* encouraged to keep such postings hype-free. What often works very well is to post information about your services or product and include a contact address, World Wide Web site, or phone number for people to use to get more information.

For example, if you want to post a notice about your immigration law services, you could post a message to alt.visa.us or the various misc.immigration.* newsgroups, where you'd find a large population of people interested in that or related subjects. Posting the same ad to rec.sport.football.college would *not* be appropriate because rec.sport.football.college has nothing to do with immigration law, visas, or becoming a citizen of another country.

One way to tell if a post is appropriate is to look at a newsgroup's charter. The charter is the formal declaration of what is on topic and what is not, and was generated at the time the group was created if the group was created in the so-called Big 7 hierarchies of comp.*, soc.*, rec.*, talk.*, misc.*, news.*, sci.*, and humanities.*. Some other groups have charters as well, but not all -- and if they do, they're often one or two lines in length. Where can you find a charter? Well, in some cases the charter is regularly posted to the newsgroup or is contained in the newsgroup's Frequently Asked Questions files. In other cases, the charter has been all but forgotten. Charters can occasionally be difficult to locate, so you may have to use your best judgment and/or ask someone who's been reading the group for a while if a particular message would be appropriate.

This is not to say that on-topic notices will always be welcome; the proliferation of inappropriate advertisements (ads posted in the wrong way to the wrong place) has resulted in *all* ads, even informational notices posted to appropriate newsgroups, tending to get a cold shoulder. You can help by limiting your ads to *informational* postings posted *only* *where* *appropriate*, and abiding by any local restrictions a given newsgroup's readers have placed on advertising.

2. *.forsale and *.marketplace newsgroups

There are many newsgroups directly involved in selling. You can generally spot them by the word "forsale" or "marketplace" in their names.

For example, rec.games.board.marketplace is a newsgroup where people post for-sale and want-to-buy notices about board games they want to buy or sell.

Similarly, the misc.forsale.* hierarchy is full of newsgroups for buying and selling various computers, monitors, printers, devices, and so forth, as well as misc.forsale.non-computer.*, for selling stuff that's not computer-related. However, the misc.forsale.* policy is rather resistant to *commercial* ads -- the hierarchy is intended as a place to post classified-style ads.

Many parts of the Net have local hierarchies as well where you can post for-sale and want-to-buy ads.

For example, in central North Carolina, the triangle.* hierarchy has triangle.forsale and triangle.wanted, where classified-style advertisements are the rule of the day.

It's generally considered rude, though, to crosspost a notice about your product to every forsale newsgroup, even ones on the opposite side of the country or world. Post your notice only to your *local* forsale newsgroup, if one exists.

3. comp.newprod

If and only if you are with a computer company which is releasing a new product and you want to make word of this new product known to the computing community, you can post a notice to the moderated newsgroup comp.newprod. The moderator of comp.newprod requires submissions to be informative and hype-free so people will use comp.newprod as a reliable way of gaining information.

4. biz.*

There is a hierarchy of newsgroups called "biz.*" which exists mainly for announcement from companies of new products, fixes and enhancements, postings of demo software, and so forth. If your site carries biz.*, and you feel that a biz.* hierarchy group would suit your purposes, go to biz.config and ask for it.

Be warned, though, that if your goal is to create a biz.* newsgroup for posting hype-filled advertisements, no one would read such a newsgroup. People only want to read newsgroups that are of benefit to them; they're not about to subscribe to a newsgroup that's nothing but ads for Bob's Bait and Tackle.

There are a few dozen biz.* newsgroups, some of which get used regularly and some of which are essentially defunct. If your site carries biz.*, you can find out more about the hierarchy by asking in biz.config, biz.general, and biz.misc.

How *not* to advertise on Usenet

Unfortunately, there are just about as many *inappropriate* ways to advertise on Usenet as there are appropriate ways.

1. Posting off-topic messages in unrelated newsgroups

Each message you post to Usenet, regardless of its content, should only be posted to related newsgroups.

For example, you run a rug company. You want to sell lots of rugs. So, you post an advertisement about your rugs in sci.physics. Not surprisingly, a lot of people send you email telling you what a jerk you are.

Why'd they do this, you ask? It's simple: sci.physics has nothing to do with selling rugs. Your ad was as off-topic as if someone had tried to get a discussion going there about the upcoming football season or started posting a lot of messages about their recent vacation.

Suppose you own that rug company, and you regularly read rec.crafts.textiles.weaving. Would you like it if someone started coming in and posting a lot of ads to the newsgroup about ginseng tablets, and then someone else came in and started trying to sell magazine subscriptions, and before you knew it, it became hard to find any actual discussion of weaving going on?

Try to look at it from the other person's point of view. If you'd resent someone posting an ad for *their* product to *your* favorite newsgroup, why would you post an ad for *your* product to thousands of other people's favorite newsgroups?

Remember the Golden Rule: "Do unto others as you would have them do unto you."

2. Spamming

Spamming is defined as posting identical or nearly-identical messages (not just ads, although ads are usually what spammers post) to a lot of newsgroups, one right after the other. Since it's really not that difficult to write a program that will post the same advertisement to dozens, if not hundreds or thousands of newsgroups, a lot of people have taken to doing this.

What's happened to people who've spammed?

They've lost their accounts, been mail-bombed (had thousands of pieces of junk email sent to them), had people call up and yell at them in the middle of the night, had people forward their mail (by this I mean paper mail, not email) to someplace strange, had people sign them up for thousands of unwanted magazine subscriptions, had people send them thousands of pages of condemnatory faxes, and so forth.

Nothing is as hated on Usenet as spamming. It's extremely, unbelievably rude and if you do it, you *will* come to regret it.

This is not a threat -- it's an observation. Any benefits spamming might have brought you will be more than counteracted by the intense public outcry against you in every newsgroup you posted your ad to.

Some members of the media have gotten the mistaken impression that spamming is hated because it's *advertising*. While it's true that Usenet users don't have much fondness for advertising, the real reason spamming is hated so much is because it's unbelievably *rude*.

If you don't regularly read a newsgroup, why would you post an ad to it? In so doing, you're basically saying that you don't care what the people in that newsgroup think or whether your ad might inconvenience them; you're out to benefit yourself. When you spam by posting the same advertisement to hundreds or thousands of newsgroups, you're saying that your personal profit is more important than the discussions of millions of people.

Would *you* like it if someone came by your house day after day and shoveled several thousand copies of an advertising circular through your windows?

Each copy of the ad takes up disk space on thousands of machines around the world -- and if you post the ad 1,000 times, that's millions of copies of your message that *you* are making other people pay to store copies of. When you spam, you're hogging hundreds of thousands of dollars worth of other people's storage space.

So please, don't do it. I've already explained that *one* copy of an off-topic ad is rude because it has nothing to do with the group it was posted to. Multiply that by a thousand times to get an idea of how rude it is to spam.

A quick note about what happens to spam:

Another consideration against spamming is that Usenet readers developed defenses against it, so it's not very effective. There are quite a few spam detectors running on Usenet, and if one of them detects that the same message has been posted repeatedly to multiple newsgroups, the humans who run those spam detectors will step in and actually *erase* the spamming messages with 'cancel' messages which are honored at most sites around the world.

A common misconception shared by many members of the media is that spam is bad because it's *advertising* and that people who cancel spam are doing so to get rid of *advertising*. In actual point of fact, most Usenet users consider cancellation to be extremely bad manners and something to be done only as a last resort. When spam-cancellers cancel spam, it's done because of the *volume* (posting hundreds of times), not because of the content.

The analogy that's often used is that yes, you have the right to walk down the street and say whatever you like -- but you do NOT have the right to stick your head in someone's house at 3 am and shout through a bullhorn.

So if you *do* spam, you're likely to lose your account, have your personal life made a living hell, possibly get sued by people whose storage space you're taking up, and in the end, not very many people are even going to see your advertisement. It's just not worth the grief you'll get.

Sorry to be unpleasant about it, but spam's a really bad idea.

Finally, if you're wondering where the term "spamming" came from, it came from a Monty Python sketch in which the characters were in a restaurant which mainly sold Spam. Items on the menu included things like "Spam, Spam, Spam, eggs, ham, and Spam." Whenever the waitress recited the menu, a group of Vikings in the corner would chime in with her, chanting the word "Spam" over and over, drowning out everything else.

Some members of the media have spread the explanation that the word "spamming" derives from throwing chunks of Spam into a fan. This is not where the term comes from.

3. Unsolicited junk email

Another often-practiced and often-punished scheme is to send email to thousands of strangers whose addresses you found in various Usenet newsgroups. In the last year, dozens of people have lost their Internet access after sending thousands of strangers ads for timeshare condos in Cancun or dubious credit schemes, and yet, the junk email continues to flood in.

Suffice it to say that junk email, using Usenet posters' addresses, is a really bad idea. Most sites will yank your account if you do that kind of thing.

4) 'Mail-Merged' ads

Some advertisers noticed that it was only *identical* postings that were getting cancelled by the spam cancellers, and cleverly came up with a way to post their ad to dozens of newsgroups while varying a line or two to make it look sufficiently different to avoid being cancelled.

For example, one book editor posted ads to dozens of newsgroups about his book, essentially giving a sales pitch for said book, while adding a paragraph to each article that purported to contain the text that had been printed about each newsgroup in said book.

It was rather obvious that the editor wasn't interested in getting feedback on the text since the book had already been published; eventually an employee at the company admitted that the technique had been used to try to avoid triggering the spam cancellers -- and that the point had indeed been to broadcast the ad widely without getting cancelled.

Don't do postings that say things like "Congratulations, REC.FOOD.DRINK.BEER reader, you are among the lucky few to be included in this amazing offer." Spam that makes a token effort to relate to each newsgroup it's posted to is still spam, and will still be erased on sight.

Conclusion

To make a long story short, off-topic advertising and advertising that equates to a bullhorn stuck into someone's window in the middle of the night are bad ideas.

Please exercise restraint and don't make the mistake many have of thinking that just because there's no central authority that can punish you for spamming newsgroups, that there will be no consequences if you do.

There will be consequences if you spam -- and you might be surprised by the lengths that vengeful Usenet users can go to when someone spams their favorite group with yet another off-topic advertisement.

If you want to advertise on Usenet, you can, but please follow the tips contained in this document's "How to" section and don't make the mistakes listed in "How not to do it."

Stay on topic; keep your notices hype-free; only post your notices to newsgroups where they are appropriate.

Do unto others as you would have them do unto you.

Afterword: Advertising on the Internet

It should be noted that there are many ways to advertise on the Internet that don't involve Usenet at all.

Usenet, you see, is NOT the same thing as the Internet. Usenet is transmitted via the Internet, but is also transmitted via other means (see "What is Usenet" in news.announce.newusers for more information). The Internet also includes services like ftp, telnet, gopher, and the World Wide Web.

A World Wide Web page allows you to put up graphics, text, and sound in an interactive hypertext format that's remarkably easy to set up and use. Many thousands of companies and individuals and organizations have put up World Wide Web pages that can be viewed by anyone around the world with a Web browser such as Mosaic or Netscape.

Since the only people who see a Web page are people who *choose* to see it, and since the person who pays for the storage space necessary to hold the Web page is the person or business or organization who put it up and designed it, a Web page is a *much* better way than advertising on Usenet to put your company's information up on the Internet.

If you need help getting going, ask the people who run your site for help on getting started; usually, all you really need to do is go buy a book on basic HTML (Hyper-Text Markup Language) design and/or scout out the newsgroup comp.infosystems.www.authoring.html. It's really not that hard to set up a Web page, and it's much, much, much more neighborly to put your advertising message on a Web page than to barrage the readers of Usenet.

IF YOU HAVE FURTHER QUESTIONS:

A board of experienced Usenet users stands ready to help suggest
non-destructive ways to use Usenet for your commercial purposes. Send
mail to commerce@acpub.duke.edu if you have questions or would like help.

>-0500

Hello,

> Anyway, I found a 1050 drive, no cables, & what I think is a suitable
power-supply. When I plugged an SIO cable or the power supply into
>the back, the circuit board inside to which those connections are soldered to
>moved a little.

>(Out of curiosity, are there places around today where I could take one
of these drives and get it realigned/working again for a reasonable price?)

>Anyway, did I do the right thing in trusting my gut and not buying the drive?
>How fragile are the 1050s anyway? I can only imagine what kind of abuse
the thing might have gotten to eventually end up on the shelf of the thrift
store, with cobwebs no less. Plus the moving circuit board. Or should I
stop being a cheap-skate and go buy the thing and get it fixed (if that's
possible)?

Thanks,
Jay

To answer your questions. The 1050 is a prettty rock solid drive.
They'll take a lot of abuse and like a timex keep on ticking. There is
really no way to tell you wether the printed circute board moving is a bad
sign or not without removing the cover, and visually looking to ensure the
PCB is still in one piece. More than likely someone else was inside it, and
never re-secured the board to the case.

I can an do repair 1050's, or you could also try these 2 other people.

Everything Auction - Update 12

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Clean out the Basement Auction

Update #3 8am 11/15

Remove NOSPAM to reply:

ie. ibaronof@midway.uchicago.edu

The point is to get rid of this stuff quick.- buyouts accepted- trades
preffered (wants list available)- and
I will go long. Any bid can be cancelled, any item withdrawn anytime.
Make an offer- volume discount
definitely available.

Auction will take 1 week + 3 days going-going-gone phase.

Buyer pays shipping. $1 for first cart, $0.50 each cart thereafter
(first class US postage, postage tried
and true- less for big orders). More for systems, and boxed stuff.

Lets try to keep it to a $5 minimum total order. "bo" means buyout
offered- and being contemplated- it doesn't
mean it'll go thru!

Atari 2600
Atari Krull ael $2

Atari basic programming (text label) min bid $1

Atari Human Cannonball box/inst only (flap tear) wombat2 $1

Atari Star Raiders box, controller, overlay, instructions min bid $2

11 Nov 1997 15:35:27 GMT Alan Sharkis napisal byl w comp.sys.atari.8bit:
> But that leaves links to existing BBS networks that run on 8-bits and STs.
> Any thoughts on how differences in message length, headers, etc., can be
> overcome without some sysop spending 36 hours a day doing it manually?

most bbs mailers support well known message bases formats, fe. squish, msg,
hudson, jam, etc. these can be easily processed locally by the fidonet tosser
and then route as a standard fidonet echomail.

3417. Memory Upgrade of 800

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-15 00:00:00 UTC
From: semslie@aol.com
Message-ID: <19971115225700.RAA18866@ladder02.news.aol.com>
Source record: 68651

I recently bought my first Atari 800 and I read that it could be upgraded to
192k with three 64k RAM boards.
Where can I buy the 64k boards? At an electronic store (Radio Shack, Fry's) or
from an Atari reseller?
Any help would be appreciated.

I'm not excited about it, just curious what gives. Would you please name some auctions that are run this way? I have participated in probably 100 auctions. I have never seen an auction run more than a day past the 'stated' date, most stop right on a stated date and time, and too bad for anyone who didn't get their bid in.... You right, he did say 'enter' but that is a very unclear term. As you agreed, this could go on forever! I understand the guys desire to maximize his oportunity to maximize his income on this....but it would be nice if the 'rules' were stated more clearly. Next time I see wording that I think is unclear, I'll make sure I get it clarified beforehand.... It certainly is my mistake for making an assumption, and not reading it carefully.

Thanks,

Austin

Here's a brief history of Atari Games after the Crash...

When Tramiel bought the home division, the coin op division became Atari Games and was sold to Namco who used them as an American distributor of their games (Rolling Thunder, PacManina)

Sometime later, Namco had cut all ties with Atari Games and Tengen(the subdivision that made Atari Games titles for consoles) and did the American releasing of their games themselves(any 3D arcade game not made by Sega). So now it was owned by Time-Warner, who already had some shares in the company, and they did the virtual reality stuff like Hard Driving and Steel Talons. Later, they become a part of Time-Warner Interactive and came out with Space Lords(great arcade rendition of Star Raiders), Primal Rage, and T-Mek. The last game they did under T-W Interactive was Area 51

But after the Jaguar fiascal(we all know that very well), the company became part of Williams even though Nolan Bushnel wanted to buy it back and that's where we are today. They have great looking titles like San Fransico Rush and Mage, and are said to be doing great.

Well, you could use an XF551 disk controller, the 551 controller came from the XF351 controller which was going to be a 3.5" disk drive but was cancelled. You can look around for an ATR8000, they use everything: 5.25, 3.5 and even 8"

Kk> get menu.atr and run it.

Well, I looked at the 1 Mb images, and they just use the "VTOC" or index
structure of regular 720 or 1040 sector disks (Single/Medium).
Because of the same structure, only a maximum of 64 files will fit in
the ATR (like on a normal disk).
On a normal disk, the number of sectors is limited to the type of disk.
On a single disk it's 720 sectors, on a medium it's 1040.
Technocally it's limited to what fits in 10 bits (the space which is
allocated to address the next sector number), so the maximum number
of sectors one could actually address using the current disk layout
would be 1023 sectors, hence sector 1024 thru 1040 cannot be addressed
on a Medium disk.

Let me explain.
Each sector on a disk contains data. There are 128 bytes making up
one sector, and the last 3 bytes of them are special.
Byte 128 specifies the amount of bytes used within the sector
(minus the 3 bytes that are always used), a completely used sector
results in a hex 7D meaning 125 bytes used.
Bytes 126 and 127 make up 16 bits.
The "left" 6 bits are linked to the File ID.
This way DOS knows to which while a sector belongs.
The "right" 10 bits make up the pointer to the next sector.
If it is zero, there is no next sector, else it points to the
next sector. With 10 bits the maximum number you can make is 1023.

If one would drop the File ID, and use that for the next sector pointer as
well, one would have 16 bits to address the next sector.
With 16 bits one can address up to 65,536 sectors =
65,536 * 128 bytes = 8 Megabytes, more than enough to store 64 files.
The main advantage of using the normal VTOC is that even DOS 2.5 can
"read" such a disk.
However, since DOS checks the 6 "left" bits to see if it matches up
to the file ID, you need a special loader program, like MENU.ATR.

So, with the DOS 2.5 file system, one could address up to a maximum of
8 Megabytes.
There even seem to exist ATR's of 16 Megabytes.
This can be only accomplished if the high bit of the "Byte count
per sector" is used. This can be easily done, because one can
specify the maximum of 125 bytes per sector easily with 7 bits.
If we do that, we can use 17 bits for sector addressing,
which adds up to 121,072 sectors or roughly 16 Mb of data.
Of course we loose all compatibility with DOS 2.5 here.

Bo.

From: The Shadow <The_Shadow@spnt.com>
Message-ID: <34710AAB.23B9@spnt.com>
Source record: 68588

I keep getting asked this question, and to date I haven't seen this addressed in any of the FAQ's, and think it may be worthy of inclusion in one or more of them...

The question is: "How do I type the tilde or squigly line which is in most web addresses? I don't have a key for it..."

Answer: The tilde is an inverse backspace on the Atari 8-Bit which can be very hard to type depending on the term program you are using, however you can insert the hex equivalent very easily, which is %7e in place of the tilde and it will work just perfectly. Do not put a space either before or after the %7e.

Hope this may be of some use to everyone!

The Shadow

Howdy folks

Let's talk graphics.

For those of you looking for a cheap and/or new XEP80, contact the ABBUC (http://home.t-online.de/home/wburger,snail-mail: ABBUC, c/o Wolfgang Burger, Wieschenbeck 45, D-45699 Herten, Germany or E-mail: wburger AT cww DOT de)

They have NEW XEP80's for DM 25.00 (approx. USD 12.50) INCLUDING postage to "the rest of the world". Europe pays DM 22.00.

And then there was this GRAPHICS 9 BUG in EUROPEAN 65XE's and 800XE's. Marius Diepenhorst found a solution to the bug (three resistors) through trial and error. But I don't really trust "trail and error" solutions, because of possible long term problems. There must be somebody in all of Europe with both an XE with this bug and enough knowledge of electronics (and the proper tools, like a "scope") to find the real source of this problem and a reliable solution. Both my 65XE and 800XE have this problem, maybe even my XEGS's. The following piece of BASIC code should result in a bar at the top of the screen that goes from black via grey to white (or vice versa). On XE's with the Gr.9 bug, certain lines are displayed containing something like the character you get when pressing Ctrl-T. And it can REALLY screw up a screen, like in the HIP-format (try the SEXUALE demo and - depending on the computer you have (bug or no bug) - you'll find out what "screw up"

means. BTW it's the most X-Rated
demo I've ever seen on the Classic
Atari.

Here's the code:

```
10 GRAPHICS 9

CU Mathy Van Nisselroy

PS in the above homepage, I had to
split "wbu" from "rger", because BBS
Express Pro 5.0 somehow choked on
that when I didn't. So it should
read "wburger" in the address.

Does the unit power up if you wiggle the power plug or only if you tilt it forward? Could be a loose cable. Open the unit and see. You won't damage anything by doing this part.

>2. Picked up an old 800XL. When I turn it on, the MEMORY TEST comes up,
>and I see three or four red rectangles, which I guess means something is

>get it fixed? ROM looks fine.

Sounds like a bad ram chip. I'm not sure which blocks go with which chip on the board. Open the unit up (you knew I would say that!), remove the board and shielding and re-seat the ram chips (eight of them on the left side.). If your chips are socketed you can easily replace them. Got any old 286 memory expansion boards? They had loads of 256K ram chips.

There are a few companies that will do hardware modifications for you or sell you one. They might even take the hardware you have for trade fodder. However, this can be expensive. It is usually better to do it yourself and just purchase the parts for under $25.

Karl

3449. WTB: XL/XE RAM Upgrade

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-17 00:00:00 UTC
From: Martin Mielke <martin@jaleo.idecnet.com>
Message-ID: <34702C14.41C6@jaleo.idecnet.com>
Source record: 68671

Hello everybody,

I have a 600 XL upgraded to 64 KB with the Atari 1064 RAM module. I'd
like to upgrade the RAM up to 256 KB at least, or 1 MB if it's possible.
Therefore I'd thank you if somebody tells me the best way to do it,
either buying the RAM modules from a dealer (list addresses!) or
building it by myself, in that case a description on how to do it will
be very helpfull! :-)

Thanks a lot in advance!

//\/\@rtin //\/\ielke (a.k.a. Pimpf)

Don't get too excited. These aren't "new" graphics modes. They
are all produced by flipping between two (or more) different
screens/modes each vertical blank. They aren't very practical
except in very limited circumstances (demos).

Everything Auction - Update 13

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing (but not box shell). Actual shipping added. -$22 bassinl

I also recall Survivor, Shadow World, Pharoah's Curse and Dimension X.
There was also a Blue Max sequel. Nautilus is the submarine game.

However, shame on you, you forgot to mention Shamus and Shamus II!

Anything else missing?

I remember Lone Raider. It had three stages of play, if I remember.
The first was shooting Dalek-type robots while waiting for a door
to open; the second was a PacMan style game; the third was avoiding
lots of flying things trying to get to the exit.

I seem to remember a "wave of publicity" (whatever that can mean,
since we're talking about an Atari game) accompanying it. It
won some competition I believe. The winner's game would be marketed
by Atari. Was it just a UK thing? Anyway, I remember the winner
being 17 years old at the time.

And that's what I remember of Lone Raider. It had some very good
sound effects and a certain flair about it.

But, I don't have it...

Agreed. XL-It is the best for PC's.

XFormer completly sucks unless you want to use Atariwriter as your Word Processor. It doesn't play games very well and the sound support is a complete joke.

XL-It plays most games and has excellent sound support.

I guess you don't ever bet on horses! I'd just buy the thing, and if it didn't work after an hour of messing with it, toss it and find another one. BTW, the 1050 uses the old Atari 800 type of power supply that outputs 9V AC. If the thing has been banged around, there's a good chance it at least needs to be adjusted.

Daemon,
Your best bet is to aquire all of them and test them out and decide for yourself. Everyone here has their favorite. Some stuff is better on one than the next. None of them is perfect. What I'd look for is probably not what you need. There is PC Xformer 3.60 (FREE), XL-It (Shareware), Atari800 (don't know), Rainbow (shareware) and now the PC Xformer for Win95 $49.95 on CD-ROM from Emulators.COM. I haven't seen this last one yet. I hope it is better than the 3.60 DOS version. I use PCXf3.60 and find it useable for what I do---run BASIC programs and program in Atari BASIC. I'm not a gamer, so the fancy stuff isn't a real big deal for me. I do like the fact that the XF cable is available for it which it isn't for the others. I also run a real 130XE and XF551, so this is convenient for transporting files to PCXf. SIO2PC and A.P.E. are also available for this purpose and works for all emulators.
Like I said, d/l and try them all and decide for yourself.

3459. Re: Steven Tucker

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-17 00:00:00 UTC
From: bostone1@aol.com
Message-ID: <19971117184201.NAA04467@ladder02.news.aol.com>
Source record: 68681

Author of APE, Steven Tucker has been very fair with me. I've been running APE on a monochrome monitor. At first it didn't work. I pointed it out. Future versions of APE worked in monochrome. As long as we understand that programs like APE and PROSYS are in need of constant tweaking for various systems and that Steven is just one person doing all of this, we can allow him time without getting upset if each and every feature doesn't work as advertized on our individual systems. Frankly, I'm amazed at how much he's done on this thing. Allowing old protected disks to be "PROSYSed" is a heck of a deal. I have APE running on an old 386 which has a BIOS that allows it to boot with no keyboard or monitor, so the 386 sits under my Atari's monitor. I turn on the 386, allow the autoexec.bat to do its thing loading and configuring APE the way I like, then when the hard disk settles down, I know I can turn on my Atari 800. It boots up APE's simulated Atari 16 meg disk drive and I'm up and running. Great system.

Hi. I'm sorry for asking a question which I'm sure has been asked
a million times. I've been trying to figure this out for quite a while
now, but I haven't had any luck. I'm trying to get Bounty Bob Strikes
Back on any of the Atari 800 (XL/XE, etc.) emulators for DOS/Win, but I
haven't foudn one that will play it. I don't know if it's my ROM, or the
settings on my emus or whatever, but if any of you have had any success
getting that game to run, please email me, as I'd greatly appreciate it.
I thought I was a die hard Atari gamer until I found this newsgroup and
man, I'm nothing compared to some of you, so I figured if anyone could
help, someone here could. Thanks in advance for any help.

Hello,

1. Picked up an old 1050 drive, not sure if it would work.
>Plugged it
in, and no luck. Then I kind of tilted the drive forward, and it
>seems
whatever connection needed to be made got made - the drive powered
>up,
and I could boot fine. The printed circuit board in the drive moves
when
>I plug in the power supply and the SIO cable -- any connection?
More
>importantly, should I (or can I) do something to remedy this
problem? Like I
>said, the drive works fine -- if I move it, I need to
do the little tilt
>thing again, and all works fine. But is there some
fundamental problem with
>the way the power supply connects to the PCB
that I should worry about/try to
>fix?

The problem that you mention could be caused by several different
things. Without more information, or visually looking at the drive it's
hard to pin point any one of them.
You could have some loose connectors inside the drive. It could be a
bad soldier joint on the power connector, maybe a few unseated chips, or a
problem with the printed circuit board itself. These are by no means the
only things that it could be, but only a few to think about.

2. Picked up an old 800XL. When I turn it on, the MEMORY TEST comes
>up,
and I see three or four red rectangles, which I guess means something
>is
wrong with the RAM. Any idea what is wrong, and how, and where I
>could
get it fixed? ROM looks fine.

Yes the red squares that you see do indeed refer to a ram failure.
Have you opened the 800xl up to see it the ram chips are socketed or not?

3. I've seen references to QMEG+OS
>4.0. What is it? Also, I'm
intrigued by the ramdisk thing. Where can I get
>memory upgrades either
for a 130XE or an 800XL (to get to 256K+) that would
>make a ramdisk
feasible?

Depends on wether you would feel comfortable doing the upgrade yourself
or not. You can find docs on memory upgrades for most any flavor of Atari 8
bit computer
at "Ftp://closertohome.dyn.ml.org/ftp/pub/atari_8bit/more_atari8bit".

> Someone wrote and said they were able to load a
>whole game
into a ramdisk to get it to run fast (compared to a floppy).
>Would a
ramdisk and QMEG+OS 4.0 let me do this?

4. What is Gem Drop X?

I
>sincerely apologize for the remedial nature of these questions. I've
been
>out of the A-8bit loop for 10+ years, and recently (within the last
month)
>started to put together a system or two for games, terminal, etc.

Thanks,
Jay

3462. Atari 800 and Percom drive

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-18 00:00:00 UTC
From: davisoja@polaris.clarkson.edu
Message-ID: <64r68a$12ng$1@news.clarkson.edu>
Source record: 68596

OK, I pulled my 800 out of storage, but I can't seem to get any of the floppy disks to work. Actually, my memory's a little foggy here. The Percom floppy drive has two SIO ports on the back, (I tried both) and since it spins the disk vertically, I'm not sure which way to insert the disk. Also, I don't remember if these games (Blue Max, Alley Cat, Drelbs...) needed the BASIC cart or not.
About the best I could do was get the disk to keep spinning while "BOOT ERROR" kept popping up on the screen. Usually it just came up as if there was no disk drive, though.

So, are all the floppies bad (about a dozen of them), is the drive bad, or is the SIO cable bad? Which seems most likely?
I'd like to get a SIO2PC cable, but if I make one out of this one, and the cable is bad, I'm still out of luck.

Anyone?
john

3463. FS/T: Atari 8-bit computer items [11/18/97] {Christmas season special}

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-18 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <347255b7.772904@nntp.ix.netcom.com>
Source record: 68597

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 11/17/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 5.00 Home Filing Manager, The (Atari)
$ 5.00 Print Shop, The (Br0derbund) {3}
$ 5.00 SynFile+ (synapse) {2} -- also includes Reference Card
$ 5.00 Timewise (Atari) {1}
$ 5.00 Touchdown Football (Electronic Arts) {2}
$ 5.00 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Loose cartridges, no box or manual:
$ 8.00 Alphabet Zoo [Spinnaker] -- no label
$ 4.00 Atariwriter
$ 9.00 Ballblazer -- XE cartridge
$ 5.00 Centipede
$12.00 David's Midnight Magic [Br0derbund]
$ 8.00 Delta Drawing [Spinnaker]
$ 8.00 Dig Dug
$ 5.00 Donkey Kong
$ 8.00 Frogger [Parker Brothers]
$12.00 Gateway to Apshai [Epyx]
$ 2.00 Missile Command
$ 5.00 Pac-Man
$ 8.00 Qix
$ 2.00 Space Invaders
$ 4.00 Star Raiders
$ 5.00 Super Breakout

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will
not boot up. Sold as non-working item, possibly repairable, for
parts only!

$ 7.00

*****

LOT #2

ATARI 1010 PROGRAM RECORDER, with power supply, and manual.

This item has not been tested.

I have plugged in this recorder, and it did power up. The
rewind and fast forward (advance) functions work. It must be
hooked to a computer to test the play and record functions.

$ 9.00

*****

LOT #3

ATARI 820 PRINTER, with two (2) rolls of paper and built-in
power cord.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$ 8.00

*****

LOT #4

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$23.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print" Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for 400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 8.00

*****

LOT #6

EPSON RX-80 PRINTER with built-in power cord.

$14.00

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.00 for the first disk-based software item and $1.25 for each additional disk-based software item, unless otherwise listed. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price

items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

3464. FS/T: printers [11/18/97] {Christmas season special}

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-18 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <347a5805.1362469@nntp.ix.netcom.com>
Source record: 68598
Cross-posted to: comp.sys.apple2.marketplace,comp.sys.atari.8bit,comp.sys.cbm,comp.sys.tandy,comp.sys.ti

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 11/17/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 233 for various 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site,
including 12 for the Commodore Vic-20 computer!

I have the following printers available, for sale or trade. These
were acquired with various computer systems, and while they may work
with more than one type of computer system, I have included the
type of system that they were acquired with, where applicable.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

COMMODORE MPS801 DOT MATRIX PRINTER, with built-in power cord.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$ 9.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for
something that isn't listed, please don't ask (because if I
had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
considered (especially if the trade offer overwhelms me). I
collect for over 50 different systems, so please feel free
to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't
serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

Clean out the Basement Auction (Clean Out The Basement Auction Upd#7
26/52/78/8bit/Int/Aquar/Odd/F)

Update #7 10pm 11/17 Going -going-gone phase starts Wednesday.

highlights:
Boxed Aquarius
Boxed Odyssey Carts
Inty Imagic groop
Boxed Channel F

Remove NOSPAM to reply:

ie. ibaronof@midway.uchicago.edu

The point is to get rid of this stuff quick.- buyouts accepted- trades
preffered (wants list available)- and
I will go long. Any bid can be cancelled, any item withdrawn anytime.
Make an offer- volume discount
definitely available.

Auction will take 1 week + 3 days going-going-gone phase.

Buyer pays shipping. $1 for first cart, $0.50 each cart thereafter
(first class US postage, postage tried
and true- less for big orders). More for systems, and boxed stuff.

Lets try to keep it to a $5 minimum total order. "bo" means buyout
offered- and being contemplated- it doesn't
mean it'll go thru!

Atari 2600
Atari Krull apd $3

Atari basic programming (text label) jduty $1

Atari Human Cannonball box/inst only (flap tear) wombat2 $1

Atari Star Raiders box, controller, overlay, instructions min bid $2

Atari Fireworld bi only (flap tear) wombat2 $1

I've played Zaxxon 16K (cassette version) and 32K (disk
>version) on an XL/XE
machine (either 800XL, 65XE or modified 130XE - or maybe
>even all 3, anyway
it was an OS C machine) without any problems. Maybe
>there's more than one
version of the games (old OS B versions, and newer OS C
>versions?). anyone?

I've personally seen the 32k version of Zaxxon played on all three
version of the
Atari 8 bit os. Rev a, b, &c.

3468. SIFE Announced

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-18 00:00:00 UTC
From: kendrick@zippy.sonoma.edu
Message-ID: <64rnqa$f65$1@nuke.csu.net>
Source record: 68602

SIFE ANNOUNCED

Because of the feedback I've received on Gem Drop for the Atari
(specifically, many people's raves about the graphics), I've decided
to make a font editor for the new software-based graphics mode used by
Gem Drop.

This program will make the task of generating images for this
graphics mode trivial (compared to painstaking, like it was
for Gem Drop!)

For a little more info. on SIFE (and more coming soon!), see:

http://zippy.sonoma.edu/kendrick/nbs/atari/utils/sife/

> Of course we loose all compatibility with DOS 2.5 here.

Hmm, is it implemented in any dos ?
If so, it would be another standard.
16 Megabytes images could be used without creating of another
strange FS. 16 bits for sector addressing should be enough.
One can use DD sectors (256 bytes per sector) and MyDos like long links
getting 65536 sectors * 256 bytes = 16 MB per image.
MyDos should be able to read this kind of disk without any problems.
Additionally you have got subdirs in MyDos so 64 files per directory
is not a problem.

BTW. Does any body know about dos that uses only 4 sectors
(instead of 8) per directory thus getting additional 4 sectors
for data ?
I have got several ATR images of this kind, but have no idea
what dos was used to create them.
Marek Wojciechowski

3470. Auction - Lots of 8-Bit - Ends in One Week!

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-18 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971118125800.HAA02313@ladder02.news.aol.com>
Source record: 68604

Everything Auction - Update 14

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing (but not box shell). Actual shipping added. -$22 bassinl

3471. Sega light conversion

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-18 00:00:00 UTC
From: Glenn Bruner <brunergs@pcisys.net>
Message-ID: <01bcf425$6ea7f6c0$4f664ccf@none>
Source record: 68605

Some posted a short time ago on how to get his Sega light gun to work with his 7800. I found the cable I made (from a magazine article) that correctly routes the signals so you don't have modify the gun. Here is the cable wiring:

Atari 9 pin female Sega 9 pin male
Pin 1 to Pin 6
Pin 6 to Pin 7
Pin 7 to Pin 5
Pin 8 to Pin 8

Be aware that without modifying the firing switch inside the gun will work backwards. Basicly, when you release the trigger, the gun fires; instead of when you press the trigger. Good luck!

I just wanted to know if the "next" issue of Atari Classics has made it out. You see, I want to support AC, but I don't have a heck of a lot of money......so if I can delay subscribing (my subscription finished last issue) it would be best for my pocket book. No sense in sending money, and waiting a year for an issue.

Source record: 68611

Atari 800s expand memory usually via the old Axlon standard. Axlon used to make a 128K board that fit it the middle memory slot for a total of 160K. Other versions came out that remained backward compatible to use the same software with more memory. I've got a 256K board and know that there are one megabyte boards too. I think B&C Computervision might have some, but they are in the middle of a move and might not be able to find them right away :) Their web page is www.myatari.com and has quite a list of things for sale, including Logo manuals.

I am now using XL-It! and it's working great. Finally got the sound working. (Found the Pokey11.zip and set the sound setting to 'Old Soundblaster'.)
Anyway, I am looking for the game 'Yacht-man'. It's a Yahtzee game, where your opponent is a pair of eyes that move around. I can't find it. It's not in the Mega Games files. Anyone know where to find it? Thank you.

Greetinks.

I'm trying to figure out how to design a serial port attached to the 800XL PBI bus. I'm very ignorant when it comes to hardware design, and I figured trying to attach a 16550 UART to my Atari would be a good place to start. I've read Earl Rice's article in Antic about how to attach a different UART, but it's really hard to make sense of because of my weakness in hardware.

Is there anywhere I can find a good beginning-to-end PBI project that explains which chips are used and why? Or would someone be willing to help me figure out what I need and how to do this?

Thanks in advance!

This certainly brought back some memories. I remember Quasimodo
and Rainbow Walker being quite surreal in concept. And Alley Cat
was just hilarious.

Did anyone ever hear of what Bill Williams ended up doing? He
wrote Necromancer and Alley Cat; the only other game I know
he wrote was APX's Salmon Run. I'm sure he would've had a
great career in game design/programming.

Posting-Frequency: 7 days
Last-modified: October 27, 1997

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

3492. FS: Mint/Boxed Donkey Kong 8-bit

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-18 00:00:00 UTC
From: Ethan <ethanm@fa.disney.com>
Message-ID: <347233E7.41C6@fa.disney.com>
Source record: 68626

I can get this cart new in box. It's $8 shipped to U.S. addresses. Let me know if you'd like one.

Thanks,
Ethan

3493. Journey To The Planets/M.U.L.E.

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-19 00:00:00 UTC
From: SKP <skp@mail.utexas.edu>
Message-ID: <3472CC27.8C07F183@mail.utexas.edu>
Source record: 68532

Anyone have the docs for Journey To The Planets? I love that game and want to know what the background info is. Also does anyone else here have the problem with M.U.L.E. displaying the time bar in the plot screen on Atari800Win. ?

3494. Everything Auction - 6 Days Left!

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-19 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971119130201.IAA22703@ladder01.news.aol.com>
Source record: 68533

Everything Auction - Update 15

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing (but not box shell). Actual shipping added. -$22 bassinl

Atari Home Computers
A1. Koala Pad. Includes Koala Pad touch table, stylus, Micro Illustrator Owners Manual, and Touch Table Owners Manual. Plugs into controller port 1. Very rare. Disks not included. -$9.95 min
A2. MAC/65 with DDT Macro Assembler and Editor Program for Atari Computers. (c) 1984. Bright orange cartridge. Includes manuals in bright yellow binder. -$20 mbowen
A3. Pengo cartridge. Complete in box with instructions. -$3.95 dperw
A4. Mr Do! Disk. Atari Computers one side/Commodore 64 flip side. -$1.95 min
A5. Crossfire cartridge. No label. -$3.95 dperw
A6. Kindercomp cartridge. -$1.95 min
A7. Gorf cartridge. -$3.95 dperw
A8. Centipede cartridge -$1.95 min
A9. Galaxian cartridge -$3.95 dperw
A10. River Raid cartridge -$3.95 dperw
A11. Pac-man cartridge -$1.95 min
A12. Atari Microsoft BASIC. CX8126. Includes 167 page manual and disk. -$12 semslie
A13. Atari Macro Assembler and Program-Text Editor. Includes 2 manuals/reference card/disk. -$8 mbowen
A14 Track Attack disk, Broderbund -$1.95 min
A15 Hacker disk, Activision -$1.95 min
A16 Drol disk, Broderbund -$1.95 min
A17 Spy Hunter disk, Sega -$1.95 min
A18 Master of the Lamps disk, Activision -$1.95 min
A19 The Great American Cross Country Road Race, Activision -$1.95 min
A20 Maxi Golf, Activision 2 disk set -$2.50 min

Atari Home Computers Instructions
A21 APX (Atari Program Exchange) Keyboard Organ Instructions -$.50 min
A22 APX (Atari Program Exchange) Sketchpad Instructions -$.50 min
A23 APX (Atari Program Exchange) Video Math Flashcards Instructions -$.50 min
A24 APX (Atari Program Exchange) Presidents of the United States Instructions -$.50 min
A25. Instructions for MAC/65 and OS/A+ disk based version of Assembler Editor and Operating System. In bright yellow binder. Add $1 to above shipping. -$2.95 min.

Atari 7800 Cartridges New in Boxes
(Very good-excellent condition, without shrinkwrap)
A26. Donkey Kong -$1 gmcclel814
A27. Donkey Kong Jr. -$1.50 jasongvr
A28. Ms. Pac-man -$1 gmcclel814

Overlays
O1. Colecovision Front Line English/French (set of 2) -$1.95 min
O2. Atari 2600 Space Shuttle. Silver with red/black letters. Fits 6 button CX2600. -$5 ltravis
O3. Atari 2600 Star Trek. Combat Control Panel. Excellent, like-new condition. Fits standard Atari joystick. -$4 min
O4. Atari 5200 Pac-Man. Pair, unpunched. -$.50 min
O5. Atari 5200 Super Breakout single -$.50 min

Atari 5200
A29. Beamrider. New in box (unsealed) -$6 Toyhound
A30. Keystone Kapers. New in box (unsealed) -$4.95 min
A31. Pitfall. New in box (unsealed) -$5 Toyhound
A32. Rescue on Fractalus! New in box (sealed) -$15 hoodlum
A33. Zenji. New in box (unsealed) -$10 awwatkin
A34. Zone Ranger. New in box (unsealed) -$10 hoodlum
A35. Blue Print cartridge -$2.50 dominion
A36. Bounty Bob Strikes Back cartridge -$40 hoodlum
A37. Gorf cartridge -$8 hoodlum
A38. Gyruss cartridge -$4 toyhound
A39. Pac-man cartridge -$1 min
A40. Quest for Quintana Roo cartridge -$6 hoodlum
A41. Realsports Baseball cartridge -$1 min
A42. Realsports Soccer cartridge -$1 min
A43. Realsports Tennis cartridge -$1 min
A44. Realsports Football cartridge -$1 min
A45. Wizard of Wor cartridge -$10 hoodlum

Atari 5200 Empty Boxes
A46. Ballblazer (very poor condition, top torn away) -$.50 gmcclel814
A47. Megamania (very poor condition, faded) -$.50 gmcclel814
A48. Pitfall II (very good condition, without insert) -$2 toyhound

Marty,
Looking at the model number, it looks like it is probably a Western
Digital drive (OEM).
Are the sectors with the $FF all ones registered as good? If so, that
is probably what that DOS is looking for. I wouldn't worry about that.
The pins are probably for jumpers for comfigurations. Do you have a set
that list 512 and 1024 as indications? If these markings are at these
pins, you should have a jumper on the 512 to an adjacent pin. There
probably is a pair of pins that are used for the LED though, probably
next to the SCSI connector or power connector.

Semslie,
Thuis is easy. RCA (phono tyoe plug) that us on the side of the 800 IS
TV signal (RF) not video level. Simple get an adaptor from RCA to F
(standard cable TV connector) and connect this directly to you TV
antenna in terminal. Switch to CH 2 to 3 (same as the switch nect to the
connector/cable on the computer.) and you're on-line.

Marek,
SpartaDOS uses 3 byte addressing too for a total of 16MB/disk max.
On the last item, it is probably StartaDOS that created the directory
structure. Is the directory located, starting at sector 6? If so, it is
Sparta. If it is at 360, it is an AtariDOS incarnation, probably MyDOS.
If it's someplace else, who knows?

Clean out the Basement Auction (Clean Out The Basement Auction Upd#8
26/52/78/8bit/Int/Aquar/Odd/F/Sin)

Update #8 8am 11/18

Going-going-gone phase starts tonite. Note: some trades are pending.
Sorry, I prioritize trades!

Remove NOSPAM to reply:

ie. ibaronof@midway.uchicago.edu

The point is to get rid of this stuff quick.- buyouts accepted- trades
preffered (wants list available)- and
I will go long. Any bid can be cancelled, any item withdrawn anytime.
Make an offer- volume discount
definitely available.

Auction will take 1 week + 3 days going-going-gone phase.

Buyer pays shipping. $1 for first cart, $0.50 each cart thereafter
(first class US postage, postage tried
and true- less for big orders). More for systems, and boxed stuff.

Lets try to keep it to a $5 minimum total order. "bo" means buyout
offered- and being contemplated- it doesn't
mean it'll go thru!

i guess you know this site...

http://stratus.esam.nwu.edu/judd/fridge/fridge.html

or ftp://ftp.funet.fi/pub/cbm/

here you can find lots of informations concerning
coding in 8bit assembler... (yeah... c=hacking is a MUST for
every ATARI ;) 8bit coder... ok I know that this c-hacking
ascii-coding-issues are for cbm (c64/128) machines but there
are lots of useful stuff...

f.e. FAST 8/8 multiplikation-tricks
3d-coding
...

discover for yourself... ;)

another example... some variations of FLI images on c64 are
similar to the XL-HIP methods, don't you think so?

bye and happy coding

Heaven, Coder of 8bit Crew TaquarT

ps. don't forget to get a copy of the new metallica cd called
"reload"...

What are you using, Netscape? Here's the fix. Hold down SHIFT when you
click on what you want to download, then on SAVE FILE AS. This will save
it to the hard drive and not corrupt it.

That's welcome to hear, but hardly unusual. Ataris have been very attractive for cable-TV "bulletin-board channel" applications for at least a decade that I have personal experience of. A friend of mine wrote (in BASIC) such an app for our local community channel back when it operated out of a production studio at my/his/our local high school radio station. The software was pretty cool, it even used a hardware "dongle" so that the great unwashed couldn't get in and mess with it.

What they COULD do, however, was reboot without the bulletin-board-display program boot-disk in the drive! I turned MY TV on one day to find not only the blue GR.0 screen and the READY prompt, but a friend of mine (I recognized his style) typing away, fiddling around, trying to write a BASIC program! I called up and talked to him, and tried to trick him into issuing an XIO 254 command (FORMAT!) against his personal floppy drive, but couldn't get it right and didn't want to tip my hand by seeming TOO persistent. I think I had him POKE a bunch of numbers into Page 6, too, to try to do the equivalent in an assembly program, but I munged that too. Oh well. Settled for doing some funky graphics for the enjoyment of the folks around town...

I seem to recall that our own John Harris has also developed and marketed, in the past, a much-more-sophisticated cable-TV-bulletin-board system based on the Atari 8-bit. I believe John's did graphics, as well as just text. Right, John?

Oh, and of course there were Atari 8-bits at the heart of all Chuck E. Cheese restaurant operations, not surprisingly since Chuck E. Cheese and Atari were both started by the same person, Nolan Bushnell...

Baloney. David Firth's "atari800" includes Amiga-specific code and
works just fine. On my A2000 with 68020 it's too slow to be really
useful (4 seconds to echo a typed haracter), but thhat's not the
emulator's fault! I'm sure on a more "current" Amiga "atari800"
would work just fine.

Incidentally, I had to do some "back-porting" of the Amiga-specific
source code (v0.8.0) to get it to work under AmigaDOS 2.05 -- David wrote
it against 3.0 -- but I _did_ get it working.

More info available upon request.

DISPLAY LIST INTERRUPTS

The display list interrupt (DLI) is one of the most powerful capabilities built into the ATARI Home Computer. It is also one of the least accessible features of the system, requiring a firm understanding of assembly language as well as all of the other characteristics of the machine. Display list interrupts all by themselves provide no additional capabilities; they must be used in conjunction with the other features of the system such as player-missile graphics, character set indirection, or color register indirection. With display list interrupts the full power of these features can be deployed.

THEORY OF OPERATION

Display list interrupts take advantage of the sequential nature of the raster scan television display. The television draws the screen image in a time sequence. It draws images from the top of the screen to the bottom. This drawing process takes about 17,000 microseconds, which looks instantaneous to the human eye, but is a long time in the time scale that the computer works in. The computer has plenty of time to change the parameters of the screen display while it is being drawn. Of course, it must effect each change each time the screen is drawn, which is 60 times per second. Also (and this is the tricky part), it must change the parameter in question at exactly the same time each time the screen is drawn. That is, the cycle of changing screen parameters must be synchronized to the screen drawing cycle. One way to do this might be to Iock the 6502 up into a tight timing Ioop whose execution frequency is exactly 60 Hertz. This would make it very difficult to carry out any computations other than the screen display computations. It would also be a tedious job. A much better way would be to interrupt the 6502 just before the time has come to change the screen parameters. The 6502 responds to the interrupt, changes the screen parameters, and returns to its normal business. The interrupt to do this must be precisely timed to occur at exactly the same time during the screen drawing process. This specially timed interrupt is provided by the ANTIC chip; it is called a display list interrupt (DLI).

The timing and execution of any interrupt process can be intricate; therefore we will first narrate the sequence of events in a properly working DLI. The process begins when the ANTIC chip encounters a display list instruction with its interrupt bit (bit D7) set. ANTIC waits until the last scan line of the mode line it is currently displaying. ANTIC then refers to its NMIEN register to see if display Iist interrupts have been enabled. If the enable bit is clear, ANTIC ignores the interrupt and continues its regular tasks. If the enable bit is set, ANTIC pulls down the NMI line on the 6502. ANTIC then goes back to its normal display activities. The 6502

vectors through the NMI vector to an interrupt service routine in the OS. This routine first determines the cause of the interrupt. If the interrupt is indeed a DLI, the routine vectors through addresses $0200, $0201 (low then high) to a DLI service routine. The DLI routine changes one or more of the graphics registers which control the display. Then the 6502 RTIs to resume its mainline program.
5-1

DISPLAY LIST INTERRUPTS
There are a number of steps involved in setting up a DLI. The very first thing you must do is write the DLI routine itself. The routine must push any 6502 registers that will be altered onto the stack, as the OS interrupt poll routine saves no registers. (The 6502 does automatically push the Processor Status Register onto the stack.) The routine should be short and fast; it should only change registers related to the display. It should end by restoring any 6502 registers pushed onto the stack. Next you must place the DLI service routine somewhere in memory. Page 6 is an ideal place. Set the vector at $0200, $0201 to point to your routine. Determine the vertical point on the screen where you want the DLI to occur, then go to the corresponding display list instruction and set bit D7 of the previous instruction. FinalIy, enable the DLI by setting bit D7 of the NMIEN register at $D40E. The DLI will immediately begin functioning.
DLI TIMING

As with any interrupt service routine, timing considerations can be critical. ANTIC does not send the interrupt to the 6502 immediately upon encountering an interrupt instruction; it delays this until the last scan line of the interrupting mode line. There are a number of processing delays before the DLI reaches your service routine. Thus, your DLI service routine will begin executing while the electron beam is partway across the screen in the last scan line of the interrupting mode line. For example, if such a DLI routine changes a color register, the oId color will be displayed on the left half of the screen and the new color will show up on the right half of the screen. Because of uncertain timing in the response of the 6502 to an interrupt, the border between them will not be sharp but will jiggle back and forth irritatingly.

There is a solution to this problem. It is provided in the form of the WSYNC (wait for horizontal sync) register. Whenever this register is addressed in any way, the ANTIC chip pulls down the ROY line on the 6502. This effectively freezes the 6502 until the register is reset by a horizontal sync. The effect is that the 6502 freezes until the electron beam reaches the right edge of the standard playfield. If you insert a STA WSYNC instruction just before the instruction which stores a value into a color register, the color will go into the color register while the beam is off the screen. The color transition will occur one scan line lower, but will be neat and clean.

The proper use of a DLI then is to set the DLI bit on the mode line before the mode line for which you want the action to occur. The DLI service routine should first save the 6502 registers onto the stack, and then load

the 6502 registers with the new graphics values to be used. It should execute a STA WSYNC, and then store the new values into the appropriate ANTIC or CTIA registers. FinalIy, it should restore the 6502 registers and return from the interrupt. This procedure will guarantee that the graphics registers are changed at the beginning of the desired line while the electron beam is off the screen.

5-2

DISPLAY LIST INTERRUPTS
DLI EXAMPLE

A simple program demonstrating a DLI is given below:

```
10 DLIST=PEEK(560)+256*PEEK(561):REM Find display list
20 POKE DLIST+15,130:REM Insert interrupt instruction
30 FOR l=0 TO 19:REM Loop for poking DLI service routine
40 READ A:POKE 1536+1,A:NEXT I
50 DATA 72,138,72,169,80,162,88
60 DATA 141,10,212,141,23,208
70 DATA 141,24,208,104,170,104,64
80 POKE 512,0:POKE 513,6:REM Poke in interrupt vector
90 POKE 54286, 192: REM Enable DLI
```

This routine uses the following assembly language DLI service routine:

```
PHA Save accumulator
TXA
PHA Save X-register
LDA #$50 Dark color for characters
LOX #$58 Pink
STA WSYNC Wait
STA COLPF1 Store color
STX COLPF2 Store color
PLA
TAX
PLA Restore registers
RTI Done
```

This is a very simple DLI routine. It changes the background color from blue to pink. It also changes the color of the characters so that they show up as dark against the pink background. You might wonder why the upper half of the screen remains blue even though the DLI routine keeps stuffing pink into the color register. The answer is that the OS vertical blank interrupt routine keeps stuffing blue into the color register during the vertical blank period. The blue color comes from the OS shadow register for that color register. Every hardware color register is shadowed out to a RAM location. You may already know about these shadow registers at Iocations 708 through 712. For most purposes you can change colors by poking values into the shadow registers. If you poke directly into the hardware registers, the OS shadow process will wipe out your poked color within a 60th of a second. For DLls, however, you must store your new color values directly into the hardware registers. You can not use a DLI to set the

color of the first displayed line of the screen; the OS takes care of that line for you. Use DLls to change colors of lines below the first line.

5-3

DISPLAY LIST INTERRUPTS
ATTRACT MODE

By stuffing colors directly into the hardware registers, you create a new problem: you defeat the automatic attract mode. Attract mode is a feature provided by the operating system. After nine minutes without a keypress, the colors on the screen begin to cycle through random hues at Iowered luminances. This ensures that a computer left unattended for several hours does not burn an image into the television screen. 1t is easy to build attract mode into a display list interrupt. Only two Iines of assembly code need be inserted into the DLI routine:

```
OId New
LDA NEWCOL LDA NEWCOL
STA WSYNC EOR COLRSH
STA COLPF2 AND DRKMSK
STA WSYNC
STA COLPF2
```

DRKMSK and COLRSH are zero page locations ($4E and $4F) set up and updated by the OS during vertical blank interrupt. When attract mode is not in force, COLRSH takes a value of 00 and DRKMSK takes $FF. When attract mode is in force, COLRSH is given a new random value every 4 seconds and DRKMSK holds a value of $F6. Thus, COLRSH scrambles the color and DRKMSK lops off the highest luminance bit.

DETAILED TIMING CONSIDERATIONS

The implementation of attract mode in DLls exacerbates an already difficult problem: the shortege of execution time during a DLI. A description of DLI timing will make the problem more obvious. DLI execution is broken into three phases: - Phase One covers the period from the beginning of the DLI to the STA WSYNC instruction. During Phase One the electron beam is drawing the last scan line of the interrupting mode line. - Phase Two covers the period from the STA WSYNC instruction to the appearance of the beam on the television screen. Phase Two corresponds to horizontal blank; all graphics changes should be made during Phase Two. - Phase Three covers the period from the appearance of the beam on the screen to the end of the DLI service routine. The timing of Phase Three is not critical.

One horizontal scan line takes 114 processor clock cycles of real time. A DLI reaches the 6502 on cycle number 8. The 6502 takes from 8 to 14 cycles to respond to the interrupt. The OS routine to service the interrupt and vector it on to the DLI service routine takes 11 machine cycles. During this time from 1 to 3 cycles wi11 be stolen for memory refresh DMA. Thus, the DLI service routine is not reached until from 28 to 36 clock cycles have elapsed. For planning purposes we must assume the worst case and program as

if the DLI service routine is reached on cycle number 36. Furthermore, the

STA WSYNC instruction must be reached by cycle number 100; this reduces the time available in Phase One by 14 cycles. Finally, ANTIC's DMA will steal some of the remaining clock cycles from the 6502. Nine cycles will be lost to memory refresh DMA. This leaves an absolute maximum of 55 cycles available for Phase One. This maximum is achieved only with blank line mode lines. Character and map mode instructions will result in the loss of one cycle for each byte of display data. The worst case arises with BASIC modes 0, 7, and 8, which require 40 bytes per line. Only 15 machine cycles are available to Phase One in such modes. Thus, a Phase One routine will have from 15 to 55 machine cycles of execution time available to it.

Phase Two, the critical phase, extends over 27 clock cycles of real time. As with Phase One, some of these cycles are lost to cycle stealing DMA. Player-missile graphics will cost five cycles if they are used. The display instruction will cost one cycle; if the LMS option is used, two more cycles will be stolen. Finally, one or two cycles may be lost to memory refresh or display data retrieval. Thus, from 17 to 26 machine cycles are available to Phase Two.

The problems of DLI timing now become obvious. To Ioad, attract and store a single color will consume 14 cycles. Saving A, X, and Y onto the stack and then loading, attracting, and saving three colors into A, X, and Y will cost 47 cycles, most if not all of Phase One. Obviously, the programmer who wishes to use DLI for extensive graphics changes will expend much effort on the timing of the DLI. Fortunately, the beginning programmer need not be concerned with extensive timing calculations. If only single color changes or simple graphics operations are to be performed, cycle counting and speed optimization are unnecessary. These considerations are only important for high-performance situations.

There are no simple options for the programmer who needs to change more than three color registers in a single DLI. It might be possible to load, attract, and store a fourth color early in Phase Three if that color is not displayed on the left edge of the screen. Similarly, a color not showing up on the right side of the screen could be changed during Phase One. Another approach is to break one overactive DLI into two less ambitious DLls, each doing half the work of the original. The second DLI could be provided by inserting a single scan line blank instruction (with DLI bit set) into the display list just below the main interrupting mode line. This will consume some screen space.

Another partial solution is to perform the attract chores during vertical blank periods. To do this, two tables of colors must be kept in RAM. The first table contains color values intended to be displayed by the DLI routines. The second table contains the attracted values of these colors. During vertical blank, a user-supplied interrupt service routine

fetches each color from the first table, attracts it, and stores the attracted color to the second table. The DLI routine then retrieves values directly from the second table without paying the time penalty for attract.

5-5

3507. DE RE ATARI CHAPTER 5 - Part 2

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-19 00:00:00 UTC

```
DISPLAY LIST INTERRUPTS

MULTIPLE DLls
It is often desirable to have a number of DLls occurring at several
vertical positions on the screen. This is an important way to add color to
a display. Unfortunately, there is only one DLI vector; if multiple DLls
are to be implemented then the vectoring to the appropriate DLI must be
implemented, in the DLI routine itself. There are several ways to do this.
If the DLI routine does the same process with different values then it can
be table-driven. On each pass through the DLI routine, a counter is
incremented and used as an index to a table of values. A sample DLI routine
for doing this is as follows:
PHA
TXA
PHA
INC COUNTR
LDX COUNTR
LDA COLTAB,X Use page two for color table
STA WSYNC Wait
STA COLBAK
CPX #$4F Last Iine?
BNE ENDDLI No, exit
LDA #$00 Yes, reset counter
STA COUNTR
ENDDLI PLA
TAX
PLA Restore accumulator
RTI

The BASIC program to call this routine is:

10 GRAPHICS 7
20 DLIST=PEEK(560)+256*PEEK(561):REM Find display list
30 FOR J=6 TO 84:REM Give every mode line a DLI
40 POKE DLIST+J,141:REM BASIC mode 7 with DLI bit set
50 NEXT J
60 FOR J=0 TO 30
70 READ A:POKE 1536+J,A:NEXTJ:REM Poke in DLI service routine
80 DATA 72,138,72,238,32,6,175,32,6
90 DATA 189,0,240,141,10,212,141,26,208
100 DATA 224,79,208,5,169,0
110 DATA 141,32,6,104,170,104,64
120 POKE 512,0:POKE 513,6:REM Vector to DLI service routine
130 POKE 54286,192:REM Enable DLI
```

This program will put 80 different colors onto the screen.

There are other ways to implement multiple DLls. One way is to use a DLI counter as a test for branching through the DLI service routines to the

proper DLI service routine. This slows down the response of all the DLls, particularly the ones at the end of the test sequence. A better way is to have each DLI service routine write the address of the next routine into the DLI vector at $200, $201. This should be done during Phase Three. This is the most general solution to the problem of multiple DLls. It has the additional advantage that vectoring Iogic is performed after the time critical portion of the DLI, not before.

The OS keyboard click routine interferes with the function of the DLI. Whenever a key is pressed and acknowledged, the onboard speaker is clicked. The timing for this click is provided by several STA WSYNC instructions. This can throw off the timing of a DLI routine and cause the screen colors to jump downward by one scan line for a fraction of a second. There is no easy solution to this problem. One possible solution involves the VCOUNT register, a read-only register in ANTIC which tells what scan line ANTIC is displaying. A DLI routine could examine this register to decide when to change a color. Another solution is to disable the OS keyboard service routine and provide your own keyboard routine. This would be a tedious job. The final solution is to accept no inputs from the keyboard. If key presses are-not acknowledged, the screen jiggle does not occur.

KERNELS

The DLI was designed to replace a more primitive software/hardware technique called a kernel. A kernel is a 6502 program loop which is precisely timed to the display cycle of the television set. By monitoring the VCOUNT register and consulting a table of screen changes cataloged as a function of VCOUNT values, the 6502 can arbitrarily control all graphics values for the entire screen. A high price is paid for this power: the 6502 is not available for computations during the screen display time, which is about 75 percent of the time. Furthermore, no computation may consume more than the 4000 or so machine cycles available during vertical blank and overscan periods. This restriction means that kernels can only be used with programs requiring Iittle computation, such as certain skill and action games. For example, the BASKETBALL program for the ATARI 400/800 Computers uses a kernel; the program requires little computation but much color. The multicolored players in this game could not be done with display list interrupts, because DLls are keyed to playfield vertical positions, not player positions.

It is possible to extend the kernel idea right into a single scan line and change graphics registers on the fly. In this way a single color register can present several colors on a single scan line. The horizontal position of the color change is determined by the amount of time that elapses before the change goes in. Thus, by carefully counting machine

cycles, the programmer can get more graphics onto the screen. Unfortunately, this is extremely difficult to achieve in practice. With ANTIC DMAing the 6502, it is very difficult to know exactly how many cycles have really elapsed; a simple count of 6502 cycles is not adequate. If ANTIC's DMA Is turned off, the 6502 can assume full control of the display but must then perform all the work that ANTIC normally does. For these

reasons horizontal kernels are seldom worth the effort. However, if the two images to be displayed in different colors are widely separated, say by 20 color clocks or more, the separation should cover up the timing uncertainties and render this technique feasible.

APPLICATIONS OF DISPLAY LIST INTERRUPTS

The tremendous value of graphics indirection and all those modifiable registers in the hardware now becomes obvious. With display list interrupts, every one of those registers can be changed on the fly. You can put lots of color, graphics, and special effects onto the screen. The most obvious application of DLls is to put more color onto the screen. Each color register can be changed as many times as you have DLls. This applies to both playfield color registers and player color registers. Thus, you have up to nine color registers, each of which can display up to 128 different colors. Is that enough color for you? Of course, a normal program would not lend itself to effectively using all of those colors. Too many DLls start slowing down the whole program. Sometimes the screen layout cannot accommodate lots of DLls. In practice, a dozen colors is easy, two dozen requires careful planning, and more than that requires a contrived situation.

Display list interrupts can give more than color; they can also be used to extend the power of player-missile graphics. The horizontal positlon of a player can be changed by a DLI. In this way a player can be repositioned partway down the screen. A single player can have several incarnations on the screen. If you imagine a player as a vertical column with images drawn on it, a DLI becomes a pair of scissors with which you can snip the column and reposition sections of it on the screen. Of course, no two sections of the player can be on the same horizontal line, so two incarnations of the player cannot be on the same horizontal line. If your display needs allow graphics objects that will never be on the same horizontal line, a single player can do the job.

Another way to use DLls in conjunction with players is to change their width or priority. This would most often be used along with the priority masking trick described in Section 4.

The last application of DLls is the changing of character sets partway down the screen. This allows a program to use character graphics in a large window and regular text in a text window. Multiple character set changes are possible; a program might use one graphics character set at the top of

the screen, another graphics character set in the middle of the screen, and a regular text character set at the bottom. A 'Rosetta Stone' program would also be possible, showing different text fonts on the same screen. The vertical reflect bit can be changed with a DLI routine, allowing some text to be rightside up and other text to be upside down.

The proper use of the DLI requires careful layout of the screen display. The designer must give close consideration to the vertical architecture of display. The raster scan television system is not

two-dimensionally symmetric; it has far more vertical structure than horizontal structure. This is because the pace for horizontal screen drawing is 262 times faster than the pace for vertical screen drawing. The ATARI Home Computer display system was designed specifically for raster scan television, and it mirrors the anisotropy of the raster scan system. The ATARI Home Computer display is not a flat, blank sheet of paper on which you draw; it is a stack of thin strips, each of which can take different parameters. The programmer who insists on designing an isotropic display wastes many opportunities. You will achieve optimal results when you organize the information you wish to display in a strong vertical structure. This allows the full power of the DLI to be brought to bear.

Figure 5-1 shows some screen displays from various programs and gives estimates of the degree of vertical screen architecture used in each.

Page 5-10 has some lovely black and white screens of the following games:

SPACE INVADERS

Hello,

So I got the thrift store 800XL and the 1050 Drive up and running. Now I'm running into the problem where some of my favorite games, like One on One, Ghostbusters, Boulderdash, won't run. I had an 800 back when I first got these games, and in one of my fits of stupidity, sold it, to finance another computer. Anyway, is this incompatibility to be expected? Further, are they any solutions. I mean, I'm looking for an 800, but before I buy another computer to take up scarce desk space:

1. I recall there being a ROM switch, or something like that, where you could switch back and forth between the XL rom and a 400/800 rom, being available. Can I still buy one of these? Or, if I pull the ROM out of an old 400 I have, would it be possible to make one (is there a recipe out there for doing such a thing?)

2. I have a 130XE on the way. Will I experience the same problems with that as well, or did Atari rectify some of the incompatibility problems found in the XLs?

Or am I just better off in finding an 800 and adding another Atari to the desk?

Thanks,
Jay

Well, I think the 800 is worth owning just for four-player M.U.L.E.

In the early Eighties there were a program called 800emulator for the
800XL, it fixed the problems you have now.
The 800XL used 64Kbyte and the old 800 used up to 48Kbyte in its original.
The upper 16Kbyte of memory
could be programmed as "RamBios". The program copied the old 800Roms to
this memory and then it restarts the
computer, then there were all games compatible. If you dont find this,
check out the Closer-to-Home Webpage of Tom Hunt for some stuff like this.
Eventually you could contact some of the old "freaks" for that, some people
in germany collect such stuff.

Greetings

steinrich :-)

Clean out the Basement Auction (Clean Out The Basement Auction Upd#9
26/52/78/8bit/Int/Aquar/Odd/F/Sin)

Update #9 8am 11/20

Going-going-gone phase started. Note: some trades are pending. Sorry, I
prioritize trades!

After today no new bidders! Items at min bid will be Gone tommorow!

Unbid and boughtout items have been pulled.

Remove NOSPAM to reply:

ie. ibaronof@midway.uchicago.edu

The point is to get rid of this stuff quick.- buyouts accepted- trades
preffered (wants list available)- and
I will go long. Any bid can be cancelled, any item withdrawn anytime.
Make an offer- volume discount
definitely available.

Buyer pays shipping. $1 for first cart, $0.50 each cart thereafter
(first class US postage, postage tried
and true- less for big orders). More for systems, and boxed stuff.

Lets try to keep it to a $5 minimum total order.

Atari 2600
Atari Krull apd $3 (trade pending) g1
Atari basic programming (text label) jduty $1 g1

Atari Human Cannonball box/inst only (flap tear) wombat2 $1 g1

> If it's someplace else, who knows?

I don't think it is sparta. SpartaDos FS is quite different from
AtariDOS 2.0/2.5 FS. This images look to be DOS 2.0 compatible,
(VTOC and DIRECTORY are located in sectors 360,361... respectivly,
or maybe it is 361,362...- I am not sure) except that directory takes
only 4 instead of 8 sectors.
AFAIK MyDos uses also 8 sectors per directory, so it has to be some
other dos.
SuperDos, BiboDos, DosXL, AtariDOS 3.0 ?
I don't know anything about disk formats that these doses use, anybody does ?

Hi John,

Make sure you have a disk with DOS on it, you need DOS.SYS and
DUP.SYS to load up, so if your getting a boot error, at least the drive
is talking with the computer. Now all you need to do is insert an
Atari DOS disk like Atari DOS 2.0s, or MyDOS 4.5 or SpartaDOS, any Atari
DOS so you get the basic disk control commands loaded so you can access
the contents of your disks.

Curt

I was about to download Sections 1, 2, 3, 5 proofread, and then
reformat them like I did for Section 4 (65 column character
width, etc.) So, if you think this would be useful...???

I have put it into FinalWriter97 and I've got it formatted
with headers/footers (inside margin for 3 hole punch) to look
just like the pages in DeReAtari. While I can get postscript
out of FW to dump to a PS printer, in order to make files that
support duplex printing it I think I'll have to move it to
PageStream.

I've posted a story about my long lost Atari 400 and what a blast it was on my e-zine at http://members.aol.com/nakedeclec that may be worth a few laughs. I had no idea there was such a loyal following or I would have kept it!! Well, I hope you enjoy the tribute.

This one is just teasing on the intro. Has anyone gotten this one to run on any of the Emulators? It's about 500 disk sectors, or quite large.

I believe he said 800, no mention of XL.... The 800 has a long coax cable
that comes out the back with the RCA on the end.

I also don't know any way to hook up this unit and get a red screen....but
who knows!

If you wan't me to read any response from you, do not respond here,
Direct all responses in E-Mail to: bensmith@teleport.com

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or
keep track of your Mailing/Shipping address. To expedite your order,
include your Mailing/Shipping address and it wouldn't hurt to include
your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff
that needs work you can have some ***FREE*** Atari stuff for the cost
of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard
Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some
thing you've been looking for, Something you might want & something New
to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml.
And Jump to my FTP site linked to my Web Site so you can Download Free
Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's no inconvenience. I do ask that you specify Atari
8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not
Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

From: Jerry Glenwright <j.glenwright@ndirect.co.uk>
Message-ID: <01bcf5f4$5d9fa460$33fe4ac2@fivvwrpw>
Source record: 68567

Hi

Does anyone have any experience of connecting an Iomega Zip drive to a Classic -- either parallel or SCSI? I have one of each and I'd like to try to get one or both up and running with my Atari 8-bit machines. However, there's no point in re-inventing the wheel if someone has already written a driver...

Best wishes all

Jerry

>Atarian care

uh,will that work?
I think that the UNZIP on the Atari won't handle version 2 files.And I don't know of a way to tell PKZIP (or INFO-ZIP) to compress using the old manner so the files are probably in v2 format.(is that true,Tom?)

Besides multiple screens and windowed displays
(always useful for multi-tasking),
I found intuition rather anoying.OR,that is to say,programmes total dependance
on it.A better keyboard interface would've been nice.I WOULD like to see a S:
device that would support different screens and windowed area.
(there's already a W: windowed device handler on umich)
Different device numbers (e.g. "S2:") could be used to address different
windows and screens.Or better yet,device numbers could address screens while
"filenames" could address windows.
And "windows" could be scrollable regions (ala PC BIOS scrolling) and/or
horizontal areas that could each be a different graphics mode.(and palette)
So "S2:1:3" would address screen 2,BAND 1,window 3.(filenames ala MyDOS)
(BAND being those "horizontal area" I was mentioning)
And each area could be narrow,normal or wide playfield.
And have it's own set of P/M graphics.
(P/M bi-location is done a lot in games)
And while we're at it we could make the S: handler faster.
And the E: would work with this too.

>Like the Atari-8, the home computer aspect of the Amiga was an
>afterthought, but despite this, unlike the Atari-8, they chose a
>really advanced OS to put in there. (I'm not knocking the A8 OS so
>much given the technology at the time.) I'm sure they realized

Actually I prefer the Atari OS.The RESET button is great for breaking out of
programmes (though cartridge games like to defeat this).
The Amiga OS (NOT AmigaDOS) relied too much on the programme.There was no real
way to kill a programme that didn't want to die.And if you used something like
GOMF,AmigaOS had no "clean up" faculty.At least MS-DOS makes sure to close all
files and devices.(even if SHARE ignores this sometimes)

>that if they were going to have to shift gears and market that game
>machine as a home computer that they should put some effort into
>the OS. The 68K was then being used for workstations and thus
>there was no need to limit it to a simple program-loader or

>task-switching OS.

I'm not sure what you mean by this but Atari OS doesn't have a
"programe-loader" function to it.(except to boot a disk or other device)
Neither does DOS.It's all user-level as far as loading programmes go.
(not so for MyDOS and SpartaDOS;especially SpartaDOS X)
Only the PC is like that (before MS-DOS loads).The BIOS routines are really
quite useless and obviously only meant for use by the boot-loading programme..
(ever tried to do graphics or RS232 through the BIOS? <shiver>)

oops,recvfrom() and sendto() are used for conntionless sockets.
You'd still need send() and recv() to choose normal or out-of-band data.

Not to enter a yet another tirade about Microsoft (I don't even like their BASIC) but a friend of mine uses Windows 95 (stupid name!!!) and he said that for a supossedly "Plug&Play" OS,it sure took a lot of hacking to get working with his hardware.

I was using Windows NT at a public library (when will they learn!) and Microsoft Internet Explorer told me
"Couldn't save file.Check if there's enough disk space".
Am I the only one that finds this a little bizarre.
Doesn't it KNOW what error it got?

And moving around MediaPlayer's window produced much the same effect as walking around outside of a level in DOOM using "no clipping" mode.
(that is,copies of edges of the window got left behind)

This may sound stupid,but you DO know that many games have to be started by
pressing RESET instead of simply pressing the fire button?

I noticed that the Atari games are a lot earier to get working than Nintendo
games.The Nintendo cartridges don't even have a covering over the edge
connector.

Hello everybody!

I wonder if there is any demo scene for the 8-bitter out there. I unpacked my Atari XL some weeks ago, connected the 1050 disk drive and started to watch the demos, megademos and "gamos" (game + demo in one). I really enjoyed it. It was like living in the old good days when the 8-bitters ruled.
The last demo I have is the "Intel Outside", an original copy sent directly to me by my friend Pawel "Pirx" Kalinowski of OUR 5OFT.

Is there any new (mega)demo for our little Ataris ??? Please contact me under the email address at the end of this email. Thanks in advance and till next time!

Someone has been working on De Re Atari in installments. I hope this is
being collected into one large archive file or at least into chapter
archives. Ian Chadwick was suppose to be converting Mapping the Atari
into a data form, but that was mentioned over a year ago and I haven't
heard anything since. There was a big mess as to what format it should
be presented in. He might have gotten disgusted at all this and dumped
the project. I certainly hope not.
Ian, if you are still listening, could you provide an update?
Another book I'd like to see in e-format is Lon Pooles Your Atari
Computer. Also the SpartaDOS manuals, Action! manual, MAC/65 manual
BASIC XL and BASIC XE manuals converted to searchable data.
The MI/O and HAPPY v7.0 manuals are already available.

Jay,

Sounds like you need to track down a TRANSLATOR disk which will overlay your OS with certain patches to allow compatibility with software that wouldn't run on the XL line.

Atari specifically laid out guidelines for programming on the Atari 800's and many programmers went outside of those guidelines to get their programs running, well these violated certain regions of the OS that was changed in the 1200XL and the 600/800XL so Atari came out with a TRANSLATOR disk to help alleviate incompatibles.

As a side note, even Atari's own Atari Word Processor Program. Later on AtariWriter was released and resolved that problem.

Source record: 68490

Yes, sort of, but you need an old DOS computer and an APE cable. APE, the Atari Peripheral Emulator, allows you to use a cheap old DOS based computer with just about anything you can hook to it. I have an old 386SX with a CDROM drive hooked to my Atari 800 to access Pooldisk, a CD with tons of PD and shareware software. Any old PC that can use your ZIP drive can work too. And the PC's hard disk is the main reason for getting APE. If you have web access, check out Steven Tucker's APE web page at http://seka.nacs.net/~classics/ and see how you can even store your protected software on the PC stuff.
If you wanted to hook the Atari directly to the ZIP drive, you'd need a parallel interface anyway and you'd have to write some pretty tight driver that would fit in the Atari's small memory. I think it's better to put an old PC running APE in there instead. To the Atari, the PC ends up looking like so many things. It can act like a standard 810, a 1050, a happy drive, a huge 16 meg disk drive, a printer, a modem, and some other things I can't think of right now.
I was thinking of finding an older model laptop to run APE on, but haven't yet. I wonder if an older palmtop could be used?
Wow. I have run on a bit. Sorry. Hope this helps.

I don't know if it runs on an XE (I have a 130XE). I think at the time I still had my 800. I'll have to dig it out and see if it works. If it does, I'll see if Tom Hunt would like to put it up on the CTH FTP site. (I'd send him a copy, _IF_ I could copy it). The end is really cool, at least I thought so at the time. PLlaying a game really late at night can induce some weird mental states!

> interface or an 825?
Bob,
I'd be interested in this myself. I also have a parallel ZIP. At the
moment, I've been using mine aonly with the PC, PCXf 3.60 and the XF
Cable to transfer files from Atari floppies to the ZIP. It's not great,
but workable. SIO2PC/A.P.E should work with this too, but a direct
connect to the 8-bit would be really cool.
Could someone consider writing a driver for this setup? I would be
working through an MI/O, but I suppose an 850 could work. Hmmm... I
don't think either unit supports bidirectional communications. How about
a SCSI driver for a SCSI ZIP using the MI/O and/or Black Box interface.
That would surely work.

3556. Re: Zip drive work with 800 - 825?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-21 00:00:00 UTC
From: Curt Vendel <cvendel@aol.com>
Message-ID: <3475A4C1.28D589A8@aol.com>
Source record: 68495

Hi Bob,

Someone would have to write the drivers to allow a ZIP drive to work on an Atari 850 (not 825, 825 was an 80 column dot matrix printer) printer interface, that would probably be a little too much work since it would be easier to purchase a Black Box interface from CSS or by an ICD MIO box and use either interface's SCSI port and hook the ZIP drive to that. You could break the ZIP drive into 8 16MB partitions and use it that way (DOS format wont work though, it would have to be in Atari DOS format). The other suggestion, hook the ZIP to a low-end PC, run the GUEST program and then get a APE interface and hook your Atari to the PC using an SIO2PC cable and then access the drive that way.

>>would like to tackle the building of the interface cable myself,
>>but cannot seem to locate a place that sells the Atari cables.
>Any suggestions? >

Well someone built it for me.It's just a chip on a tiny circuit board.
(my friend had to leave out the diode for it to work)
It seems pretty simple to build to me.
This is from the APE documentation:
{
How to construct the 1489 version of the APE interface

Sio Orange (Sio Pin 3) -> Diode Clear End & Diode Band End -> 1489 Pin
#8
Sio Lt Blue (Sio Pin 10) -> 1489 Pin #14
Sio Black (Sio Pin 4) -> 1489 Pin #7
Sio Purple (Sio Pin 7) -> 1489 Pin #4
Sio Green (Sio Pin 5) -> 1489 Pin #1

PC Signal Ground (9p #5) (25p #7) -> 1489 Pin #7
PC Ring Indicator (9p #9) (25p #22) -> 1489 Pin #6
PC RXD (9p #2) (25p #3) -> 1489 Pin #3
PC TXD (9p #3) (25p #2) -> 1489 Pin #10
}
The lone "#8" got chopped off from the end of the preceding line.It's unknown
why Lynx would do this (the line is way shorter than 80 columns).
He (ST) really should've used tabs to straighten this out.

>use it in my music classroom.

Well many programmes that give you a menu of games or sound & pictures files require you to lock the files you want to show up in the menu.But APE's PC Mirror ignores the locked status of files on your MS-DOS disk. (instead sub-directories show up as being locked)

All the aminatronics used in Chuck E. Cheese restaurants were run on DEC PDP 11/44's, I'm not sure, but Nolan seemed not to like the Atari computers and tended to favor the Apple]['s more. His Androbot's all used Apple's (Atari made a special SIO version for its Summer Camps) and most of the Chuck E. Cheese's seemed to use Apple]['s to run various other items in the places.

If there is no ram disable line on the PBI, how do PBI ram expanders keep the internal dram from working the data lines? I must be missing something :)

I'm looking over these ANTIC PBI articles and I see MPD for driving /OS high in the math pack region, and unused space at $d100, but no mention of other addresses.

Does EXTSEL tell the MMU to turn off all its select lines? Wish I could find that schematic! Ugh.

Thanks

Steve

I used to do a lot of Basic/Asm coding on the 800 back in the late 70's. I wrote several large apps including character generators for Advanced Dungeons and Dragons and Traveller. I also wrote a disk catalog utility and sector viewer.

Lately, I've been curious about using the old hardware to do home automation. It seems that with the built in NTSC output, it would be a nice system for home control you could check on a spare channel.

I think you could also interface one to X10 (if the timing constraints aren't too high).

The red screen is probably Antic or GTIA (I forget which) not working
or not working right. Check to see if both are fully seated in their
sockets (assuming they are socketed).
The cable/jack I mentioned might be missing as you mentioned. He should
open the unit if the cable is missing and locate the connection and add
a cable. At any rate. This IS RF not video level signal.

Really? I seem to remember the local Chuck E. Cheese having a big vector-based monitor that showed which order number was up next... It showed large versions of the numbers and then had them spin & get smaller, and they ended up on the bottom of the display when the next order came up.. didn't look very Atari-esque to me.. and I remember they had an Apple II inside a big case with just the monitor & keyboard showing, running a "lemonade stand" game (unless you knew how to hit Ctrl-C and type NEW! hehheh)

Everything Auction - Update 17

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing (but not box shell). Actual shipping added. -$22 bassinl

Atari Home Computers
A1. Koala Pad. Includes Koala Pad touch table, stylus, Micro Illustrator Owners Manual, and Touch Table Owners Manual. Plugs into controller port 1. Very rare. Disks not included. -$9.95 min
A2. MAC/65 with DDT Macro Assembler and Editor Program for Atari Computers. (c) 1984. Bright orange cartridge. Includes manuals in bright yellow binder. -$20 mbowen
A3. Pengo cartridge. Complete in box with instructions. -$3.95 dperw
A4. Mr Do! Disk. Atari Computers one side/Commodore 64 flip side. -$1.95 min
A5. Crossfire cartridge. No label. -$3.95 dperw
A6. Kindercomp cartridge. -$1.95 min
A7. Gorf cartridge. -$3.95 dperw
A8. Centipede cartridge -$1.95 min
A9. Galaxian cartridge -$3.95 dperw
A10. River Raid cartridge -$3.95 dperw
A11. Pac-man cartridge -$1.95 min
A12. Atari Microsoft BASIC. CX8126. Includes 167 page manual and disk. -$12 semslie
A13. Atari Macro Assembler and Program-Text Editor. Includes 2 manuals/reference card/disk. -$8 mbowen
A14 Track Attack disk, Broderbund -$1.95 min
A15 Hacker disk, Activision -$1.95 min
A16 Drol disk, Broderbund -$1.95 min
A17 Spy Hunter disk, Sega -$1.95 min

3570. Programming in BASIC (BXL/BXE)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-21 00:00:00 UTC
From: Robert S Ely <rely@ix.netcom.com>
Message-ID: <34757F52.172DEAD2@ix.netcom.com>
Source record: 68581

How many readers like to do programming in BASIC? I prefer BASIC XL/XE myself. I was just wondering if anyone would like to chat in e-mail on BASIC programming? I have a couple of projects I want to get back to, like my CDump (4090 color Colrview picture print program). I want to get it to work with an HP 820C deskjet. I also have a rather complex Family History data system I started many years ago.
Anyone interested, you can e-mail me at the addresses below.

3571. Using basic programs with say... XL-it?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-22 00:00:00 UTC
From: Brian Sturk <bsturk@nh.ultranet.com>
Message-ID: <34779536.A15FC9A7@nh.ultranet.com>

I have files with extensions .bas and am trying to get them to work with xl-it. I have had no luck so far. I've tried using menu disks and that didn't work. I am dying to play some of those old Antic games. If anyone could point me in the right direction I'd greatly appreciate it.

3572. Austin 80 board & w processors

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-22 00:00:00 UTC
From: "Thomas J. Andrews" <tandrews16@delphi.com>
Message-ID: <h7VCXs+.tandrews16@delphi.com>
Source record: 68433

My mom wants to play around with word processing with just the equipment I have around here, so I have her set up with my battle-scarred 800 and Textpro. I think she'd prefer 80 columns, so I'm wondering...Austin, do you have any idea if your 80 column board would work with Textpro? How does it work with a color C= 1802 monitor as opposed to a mono monitor?

I might be interested in one...

3573. The PC Emulators

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-22 00:00:00 UTC
From: bigrex@nospam.primenet.com
Message-ID: <3477a5b2.1939431@news.primenet.com>
Source record: 68434

Well I think I've tried them all now and they all have their strengths and weaknesses. Here's my see, form the best to the worst. Strictly from an 8 bit game machine perspective.

Best
1) XL-IT
The best interface and hassle free disk, loader, mode (800, 800XL & 130XE) switching. It runs about 60-70% of the games on the hackers archives disks and doesn't bring down your system, when it crashes like at least one of the others. Sound and joystick support are tops. It still runs a little fast on +200MHZ PC's but can be tamed down by locking it to 50HZ not 60HZ.

2) PC Xformer 3.6

Except for STILL lousy sound and it's nearly as good as XL-IT when using the XF-SIO menu system, although you can't load bin, com or obj files as drives 2-8 with dos on the first drive, with XF-SIO yet. Then maybe I missed something. To give Derik his due, didn't he develop the ROM's that make all these emulators possible?

3) Atari800win

Although still very buggy (lots of reboots with this one) on Win-95 OSRs, It's really the most advanced, and has the highest potential of the lot. It run some games that the others won't. Yes, the great ported 2600 classic, "Demon Attack" runs flawlessly on this one, where the other choke on it. However some 130XE games will not run at all and crashed thing to the point that I hard to reset the thing, more than once, I might add. This might be attributed to extensive use of DirectX 5.0. Give one some time.

4) Rainbow

Nice, but severely crippled on he shareware version. It also uses Direct Draw but no one going to buy it for two reasons.
1) It's so severely crippled (tiny window @ 1024 X 768 and no sound on this version but pay version supposedly DOES have sound.
2) TOO damned many GOOD free Atari 8 emu's. When are these guys gonna' learn about TEASER crippled software. If you can't REALLY play with it, no one will spend much time with it, or give it a second thought.

5) Pokey

Nice but no sound support. It has a built in menu system like
XL-IT. To be honest, I didn't spend much time with it, for the
lack of sound.

PS. Please feel free to flame my opinions & add some of your own.
Get some life into this stodgy old NG.

>Acording to the FAQ,a 130XE with only 64k of RAM.
>That is,DON'T GET IT!!!
>(it'll wear out in a month!)
>I prefer the 800XL.Tramiel really ruined the Atari with that shoddy XE.
>(not to mention the XEP-80!)

Before I got my 130XE, it saw about 5 years of daily use without a problem
for its previous owner. He moved on to the ST, and the XE sat around for two
years before an ice backup in a brutal winter resulted in getting it thouroughly
soaked. He sold it to me after the insurance settlement for the power supply
for my XL (that one took out two supplies in two years!). I let it dry out
,
plugged it in, and it's worked perfectly in daily use for 4 years.

Wear out in a month? I don't know about that...

3576. New on the group (intro)

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-22 00:00:00 UTC
From: d.mcbay@ns.sympatico.ca
Message-ID: <d.mcbay.2.0011DC62@ns.sympatico.ca>
Source record: 68437

I always wondered if there were people who still used these classics. I still own my 600XL that I bought brand new many years ago after upgrading from my first computer, a Vic 20. I added more memory to the 600XL (48K or 64K, I can't remember). I also have the data recorder, 1050 disk drive, power supplies, manuals & books, and a few games. Everything still works too, there's barely a scratch on anything. I always took care of my stuff when I was a kid!

I just stumbled onto this group, I never knew it existed! I'm going to read all of the faqs to see just what you guys are up to. I might have some old info filed away that might be of some benefit to you. I'll see what I can find when I get home from work.

Don't listen to Shadow.

BXL and BXE are great. Write in the environment you enjoy best. Don't worry about the rest of the 8-bit community. The community is all but nonexistent anyway.

Atari Basic has some serious shortcomings and BXL and BXE both have some very welcome features that can mean the difference between success and frustration.

There is a runtime disk available for BXL, by the way.

The mortal dklugh wrote:
: Actually I prefer the Atari OS.The RESET button is great for breaking out of

Apples and oranges. The Atari OS is really just a program loader and an interface to the I/O ports and the graphics and sound hardware. It's not an OS in the modern sense of the word, i.e. task and memory management.

: The Amiga OS (NOT AmigaDOS) relied too much on the programme.There was no real
: way to kill a programme that didn't want to die.And if you used something like
: GOMF,AmigaOS had no "clean up" faculty.At least MS-DOS makes sure to close all
: files and devices.(even if SHARE ignores this sometimes)

There are utilities that can kill errant programs. I use one called PRIMAN. It's 1997 and a lot has been done on AmigaDOS. Virtual memory, unixlike task priority scheduling, more advanced GUI extensions, Unix emulation via a shared library (ixemul), retargetable audio and graphics drivers, and so on.

: I'm not sure what you mean by this but Atari OS doesn't have a
: "programe-loader" function to it.(except to boot a disk or other device)
: Neither does DOS.It's all user-level as far as loading programmes go.

You are fighting over semantics.

Wasn't the PBI port originally designed for the 1400 series or was it going to happen anyway? My 1450 motherboard has one, but it is unfortunately incompatibile with the Black Box because the modem and speed chip map through the PBI address space.

That and the new "standardized" XL OS and internal Basic could be seen as good things that came from the project.

re: Atari8 on cable TV...

I was at an Aunt & Uncle's house, flipping thru the cable
channels, and I stopped at the local-events channel. There I saw
a screen that I thought could have been easily generated on
an 8-bit Atari. Multiple-DLI bands of color and different
size text in different bands. I guess my suspicions have been
confirmed! _WOW_!!! That is _REALLY_ Cool!!!!

Clean out the Basement Auction (Clean Out The Basement Auction Upd#10
26/52/78/8bit/Int/Aquar/Odd/F/Sin)

Update #10 9pm 11/21

Going-going-gone phase started. Note: some trades are pending. Sorry, I
prioritize trades!

Unbid and boughtout items have been pulled.

Remove NOSPAM to reply:

ie. ibaronof@midway.uchicago.edu

The point is to get rid of this stuff quick.- buyouts accepted- trades
preffered (wants list available)- and
I will go long. Any bid can be cancelled, any item withdrawn anytime.
Make an offer- volume discount
definitely available.

Buyer pays shipping. $1 for first cart, $0.50 each cart thereafter
(first class US postage, postage tried
and true- less for big orders). More for systems, and boxed stuff.

Lets try to keep it to a $5 minimum total order.

Atari 2600
Atari Krull TRADED!
Atari basic programming (text label) jduty $1 g2

re: anywhere the Atari can take business away from MicroSloth...

That's the best way to do it! Small pockets of resistance all over the place that spread quietly unnoticed by the Behemoth that is MicroSoft. All we have to do is write something HIGHLY useful and then put it in a very visible place, and then make sure it is reliable, friendly, and cheap. Displays in stores would be a good example. Using more for local cable and public access is also what I mean. Has anyone ever written any semi-professional quality broadcast titling software for the A8? I wonder if we could get a copy of what the cable companies use, or is it commercial? It would be pretty cool for me, as I own one of five (that I know of) Mytek Prism Studio II genlocks in the world. However, it also was in the flood, and I haven't had a chance to test it out.

From: The_Shadow@spnt.com
Message-ID: <6566fqpdo1@news.chatlink.com>
Source record: 68519

I do a lot of programming in both Atari Basic and ML, but I have to tell you that while you may enjoy programming in BXL or BXE, if you ever intend on anyone else ever being able to use your programs stick to either Standard Atari Basic or ML. Not everyone has or is interested in purchasing BXL/BXE, and I found that when I wrote programs in those languages, I couldn't GIVE them away, let alone sell them. The identical programs in Atari Basic or ML sold like hotcakes.

With a few short in-line USR routines, you could do anything BXL/BXE would do with standard Atari Basic, and make your program runnable on ANY machine without the need of a special language.

Since I can't run TextPro without physically unplugging a BXL/BXE cart, I finally just said the heck with them all together as did everyone else I know, since TextPro is much more important than the few programs that run on BXL/BXE.

My experience has also been that the non-Atari routines in BXL/BXE are rather flaky, operating differently on different carts. This is not the case with in-line USR routines which should work smoothly on any machine.

The Shadow

Yes, I had a BSR CP-290 X-10 controller connected to my 800 XL.
It uses an RS-232 serial connection at 600 bps IIRC. There were two
different BASIC programs that I used to program it. This controller
stores the settings so the computer can be turned off.

3603. FS Original Atari 8-Bit Software/Hardware

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-22 00:00:00 UTC
From: phantomm@eastky.net
Message-ID: <657d56hrb1@ns1.sols.net>
Source record: 68526

The following is a list of Original Atari 8-bit Software and Hardware,
that we have for sale. All items have been tested on a stock 130XE and
1050 disk drive. All software and hardware are used and everything works
correctly. We have no idea what the current market value is for the used
software titles. So if you see something here you would like to purchase.
Then send us a e-mail with the items you want and a offer in US dollars.
No reasonable offer will be refused. Buyer pays shipping charges.

Here is the list of Atari 8-bit software titles.

1. Ballistic Interceptor
Disk and Instructions. No Box.

2. Cytron Masters
Disk, Manual, and Box. Requires an 800 OS Translator on XL and XE.

3. Cardware
Disk and Folder Box.

4. Jingle Disk
Disk, Instructions, and Folder Box.

5. The Great American Cross-Country Road Race
Disk, Instructions, and Folder Box.

6. Dropzone
Disk, Instructions, Folder Box.

7. Radiation Dump
Disk, Manual, and Box.

8. Silent Service
Disk, Manual, and Box.

9. MindShadow
Disk, Manual, and Box.

10. Starbase Fighter
Disk, Manual, and Box.

11. Puzzle Panic
Disk, Manual, and Box.

12. Brimstone
2 Disks and Book. No Box. Requires 2 disk drives to play.

13. MRCA Mach 2 combat flight simulator
Disk and Manual. No Box.

14. The Goonies
Disk and Manual. No Box.

15. Wizard and the Princess Hi-Res Adventure #2
Disk and Folder Box Instructions.

16. Wayout
Disk and Folder Box Instructions.

17. SPY vs SPY
Disk and Manual.

18. Asteroid Miners
Disk and Manual

19. Round About
Disk and Folder Box Instructions.

20. Micro Shuttle
Disk and Instruction Card.

21. The Tail of Beta Lyrae
Disk and Folder Box Instructions.

22. Barge
Disk and Instructions.

23. Bill Budge Pinball Construction Set
Disk and Manual.

24. Raid over Moscow
Disk and Manual.

25. Shooting Arcade
Disk and Card Instructions.

26. Sands of Mars
Disk and Manual.

27. Master of the Lamps
Disk. No manual or Box.

28. Ninja
Disk. No manual or Box.

29. Beach-Head II
Disk. No manual or Box.

30. CrossFire
Disk. No manual or Box. Requires 800 OS Translator for XL and XE.

31. On-Track Racing
Disk. No manual or Box.

32. The NeverEnding Story
Disk. No manual or Box.

33. Cohen's Towers
Disk. No manual or Box.

34. Chicken
Disk. No manual or Box.

35. Cut and Paste
2 disks, Manual, and Folder Box.

36. Music Construction Set
Disk, Manuals, and Folder Box.

37. Menu Writer
Disk, Manual and Box.

Atari 8-Bit Hardware List.

1. Atari XDM121 Daisy Wheel Printer
Good condition. No manual. Prints well.

2. Atari Remote Control Wireless Joysticks.
Excellent condition. Used only 2 or 3 times.
Original Box.

3. Atari SX212 1200bps Modem
modem, powersupply, manual, original box.
Good condition. Works very well.

4. SBM Small Business Management for Atari Computers
Requires Atari 8-bit with 40K minimum, Basic XL, 2 Double Density
Disk Drives, and Printer.
SBM includes Disk and NoteBook Manual, Basic XL cartridge and Manual.

If you see any items that you would like to purchase. Send us a E-Mail with
a list of the items you are interested in and make us an offer in US dollars.

[snip]

At the time, the Atari OS was pretty spectacular. By comparison,
every other home/personal computer available at that time (and
many released after) were equipped with minimalistic I/O kernels
which typically did not offer support for graphics, floating
point math, etc.

Hi. Say, wouldn't it be cool to take a BB, get a SCSI controller
attached to it, then attach the external SCSI model of the IOMEGA Zip
drive? Does this sound plausable anyone?

>with the fastest modem (using XON/XOFF) and supports Kermit.

What??! Kermit can't keep up with my miserable 2400 baud modem without
losing most of the characters. Ice-T is fast enough to not even NEED any
kind of flow control below 19.2kbaud or so. It also supports Zmodem. 'nuff
said.

>Both Ice-T and Kermit-65 use the normal DEC (ANSI?) character set.
>(unlike PC BBSes)

Not true! Ice-T fully supports the PC character set (as well as the ANSI
one), and I've used it quite often to successfully access modern PC-based
BBSes.

(I should know, I wrote the damn software.)

3610. NO SUBJECT

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-23 00:00:00 UTC
From: wran@thegate
Message-ID: <880265624mnewswran@thegate>
Source record: 68444

Does anybody out there know how I can get my Amiga
to communicate with my 800XL and 1050 disk drive?
What hard/software do I need and where I can get these?
Any help would be most appreciated.
Please mail me at wran@thegate.demon.co.uk with any suggestions.
Thanks.

3611. Complete 20MB Hard Disksystem for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-23 00:00:00 UTC
From: Itay <dont@spam.me.com>
Message-ID: <657rae$6k$1@news.huji.ac.il>
Source record: 68445

For sale:

Supra hard disk drive and controller, plus manual and disk.

There's a shoebox-sized case that contains a Seagate ST-225N 20MB hard disk, as well as a power supply for the whole thing. Connected to this, with a ribbon cable, is an interface card that plugs into the back of 800XL and 130XE computers.

This system allows you to use your Atari without any floppy disks, and without having to purchase an MIO or Black Box.

I'm selling it because I've been having some problems with it, and, living in Israel, I can't send it back and forth for repairs (Bob Klaas supports this product), and I've decided to store everything on my PC and use APE. (I'm also using my PC monitor as the Atari's monitor, and the power supply gives power to my XE..)

Please mail me for further details. Asking price is $50 plus shipping, or best offer. This is half of what I paid for it a couple of years ago.

>>The other suggestion, hook the ZIP to a low-end PC, run
>>the GUEST program and then get a APE interface and hook your Atari to
>>the PC using an SIO2PC cable and then access the drive that way.

This works fine and can be done on the cheap. It's weird watching the
Zip busy light flash in indirect response to a data request from the
130XE. Kinda like a 1050 on serious roids. I second the notion.

>
>Sysop Fox-1

I agree!! But you also get all the other fetures of the Black Box including
Screen to Printer dumps at the touch of a button, and the ability to add IBM
types of drives like a 1.44 Mb floppy where you can back up a 16 meg partition
on 11 floppies in a matter of minutes (Floppy Board addition is required).
Also can read disks with atari files from the IBM clone to your atari.
And best of all you get Bob Puff's support on the phone, who's never to busy
for his customers, a true diehard 8 bitter!!
```

3617. SIFE - Super-IRG Font Editor

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-23 00:00:00 UTC
From: kendrick@zippy.sonoma.edu
Message-ID: <658ej4buq1@nuke.csu.net>
Source record: 68451

SIFE is coming along suprisingly well! It's a multicolor font editor
which lets you create interlaced "Super IRG" fonts. (In "Super IRG" mode,
two IRG character sets are flashed back and forth, every VBI (50th or 60th
of a second)).

SIFE gives you a palette of 10 colors and lets you edit one character
or four characters (2x2) at a time. It automatically splits the 10
colors up into the two character sets, dithering them in a checkerboard
pattern to provide the best results.

For an example of what Super-IRG mode looks like, check out my game
"Gem Drop". (http://zippy.sonoma.edu/kendrick/nbs/atari/games/gemdrop/)

As an example, if you had the colors Red, Green, Blue and Black, a
Super-IRG screen would show you:

Black
Red
Dark Red
Green
Dark Green
Blue
Dark Blue
Yellow
Cyan
Purple

So, instead of using IRG mode and being stuck with 2 shades of 2 colors
or 4 shades of one color, you can use Super-IRG mode 2 shades of 3 colors,
as well as a few extra colors on top of that!

I'll keep c.s.a.8 posted on developments with SIFE, and of coruse tell
you all when it's released!

So far rudamentary pixel editing works great, but I'd like to add
a cut/paste buffer, possibly some more complex drawing commands, and
I of course need add things like load/save and the 2x2 edit mode...

Any suggestions are welcome, too!

3619. Amiga to 800XL

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-23 00:00:00 UTC
From: wran@thegate
Message-ID: <880292004mnewswran@thegate>
Source record: 68453

Hi folks,
Having just recently dug out my 800XL
and found this newsgroup. I was wondering if anybody
could offer me any help with transfering data (tape or
disk images) between my Amiga and my 800XL/1050 disk drive.
What software and hardware do I need, where can I get it?
Hopefully I'll hear from somebody.
Please send mail to wran@thegate.demon.co.uk
Also please excuse my recent posting (no subject), I ought
to read the manual for software before I dive in.
Thanks, any help will be most appreciated. S.Booth.

```
OPEN AUCTION ENDS ON WEDNESDAY DECEMBER 3, 1997

1. The open auction ends on December 3, 1997. At this point,
the auction will be restricted to previous bidders and bids
will win an item if not raised within 24 hours.

2. Bids are binding.

3. Payment is via check or money order. Payment must be received
before items will be shipped. Of course, references are available
on request.

4. Shipping is through USPS according to the type of packaging
and class of delivery you choose, and the weight of your items.

5. All carts are loose unless otherwise noted.

ITEM PRICE BIDDER
*SINGLE ITEMS*

Atari 2600
Squeeze Box (US Games/excellent condition) $5 minimum
Raft Rider (US Games/excellent condition) $5 minimum
Trackball -- works fine $2.50 minimum
Keyboard Controllers CX-50 (includes beat-up box) $1 minimum

Apple II
Temple of Apshai Trilogy (disk) Full/untested $1 minimum

TI 99/4A
Disk Dup (this one has a label marked Sneggit but $4 minimum
crossed out and the words Disk Dup written
next to the label. There is also a sticker
on the bottom on which is written "Chip 3"
by hand. The cart is also noticably
heavier than any of the others. I suspect
it's either a proto or more likely an EPROM
copy -- let me know if you know what this is)

Socates Educational Video System
Hodge-Podge (includes cart, box, docs -- box $2 minimum
is a little beat up though)
```

Commodore 64
Super Smash P/N C64622 $3 minimum
Cart only; label is typed, case is standard Commodore.

BULK ITEMS
Atari 400/800/1200 pack (3 carts) $3 minimum
Atari 2600 pack (40 carts) $29 minimum
Atari 7800 pack (6 carts, most shrinkwrapped) $5 minimum
C-64 Educational pack (8 carts, most with box/docs) $10 minimum
C-64 Other pack (4 carts) $5 minimum
TI-99/4A pack (4 carts) $4 minimum

Atari 400/800/1200
Untested; look to be in good condition

3622. Shareware, Freeware and PD

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-23 00:00:00 UTC
From: ernest@wxs.nl
Message-ID: <34780571.1152617@news.wxs.nl>
Source record: 68456

We are still looking for stuff for the Pooldisk II. We hope to start
production somewhere in december. If you have any Shareware,
freeware or PD stuff that is not on the CD, send it to us.
Pictures of rare equipment are wlcome too.
If you have some programs that you have written yourself, and you
would like them to be on the Pooldisk II CD, simply send them to us.
If you have any questions or suggestions, feel free to E-mail me.
Take a look at http://www.closer.brisnet.org.au/atari8cd
to find out what is currently on the CD.

ernest@wxl.nl

Please note that my provider thought it was a nice idea to change the
domain name, but my old E-mail address will still work until 2000.

3623. Re: The PC Emulators

I agree with most of what you said, but have you really examined the latest versions of POKEY? As I remember it, the author was working on the sound thing by designing a plug-in board with a real Pokey chip on it. The board was supposed to fit into the parallel port on the PC. He also had a version with pretty good sound that was the result of somebody else's samples. Unfortunately, though, there hasn't been development on this emulator for a while.

I also wish that there was further development on all the others. I felt, and still feel, that XL-It! was moving in the right direction.

PC XFormer's sound was based on an 8-bit sound blaster. It really screwed up my AWE-32 for some unknown reason. I'd get random sounds that could only be stopped by a cold reset of the PC. What I did like about it was its ability to access the PC's parallel and serial ports. I don't know what's new in the Windows 95 version on Emulators, Inc.'s new CD-ROM. The bulk of the post card I received on it spends a lot of time talking about Gemulator and almost nothing on the XFormer. It would be useful if somebody who has it could post a quick review here. Since I'm really not interested in emulating an ST or a Mac on my PC, I won't be buying that CD-ROM.

3624. Infocom titles available!

Newsgroup: comp.sys.atari.8bit

Hey guys!
I have available two Infocom adventure games. One is Infidel for the Atari, the other is Nord and Bert Couldn't Make Head or Tail of It for IBM. Both games contain the box and everything required to play (maps, accompanying referrals, manuals.) I am asking for best cash offers, or trades, which would be any classic cartridges I need. Send all $$ offers and/or trade lists as soon as you can. Speak with you soon. Oh, if you have any questions, please send them my way. Take care.
DEDICATION and PERSISTENCE are all it takes!

> if your 80 column board would work with Textpro?

No idea what so ever. I do have dopies of LJK Letter Perfect though....but
you're welcome to try it out, and if it doesn't work...or whatever...you
may return it.

> How does it work with a color
> C= 1802 monitor as opposed to a mono monitor?

It was originally made to work with a mono 80 column monitor, and an RGBI
(like a CGA monitor I believe) monitor.

Austin

3626. Re: Pokey stereo upgrade

Newsgroup: comp.sys.atari.8bit

>re: pokey upgrade...
>
>I wonder if any of the existing Atari8 3rd party companies
>will perform the Gumby or Pal upgrades for a fee? (USA)

The Stereo Gumby upgrade you will have to check around, you could try Bob Puff.
The Pal upgrade is real easy: If you have a Hong Kong unit for your 800xl
then you have sockets for all your chips. Just call Best Electronics and get
the Pal Chip. When you open up the computer on the bottom, its the second big
chip from the left. Simply substitute one for the other being careful with the
pins and you are good to go. I know NOTHING about soldering and related stuff
and I've done this twice already in less than 10 minutes.
As far as the one byte in the OS, I have yet to see one game or program that
won't work by just putting the Pal chip in (and I'm talking about 200+
European games!!!) For $12 it's the cheapest, most poweful upgrade you can
get. As I said before, if you don't have a PAL chip, you are using a crippled
atari.

3627. Ends Tomorrow! 8-Bit Programming Titles/Games/More!

Everything Auction - Update 18

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, November 24, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a US address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals; $6.95 for systems, modules, hardware, and over 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Systems
S1. Colecovision System. Includes main unit, two hand controllers, power supply, rf cable, original Coleco tv switchbox, Donkey Kong cartridge, Donkey Kong manual, copy of Owners Manual, and styrofoam packing (but not box shell). Actual shipping added. -$22 bassinl

Do a search on aminet for Atari. There are a number of
utilities that help with transferring information between
Amigas and Atari 8-bits.

I just used the null modem approach and z-modem'd binary
files between the Atari and Amiga. I also would generate
listings to "R:" on the Atari and do a text capture on the
Amiga running a terminal program.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). Without paper separator (wire rack). Supports near letter quality print. Handles friction feed or fan-fold paper. Very nice condition. Works well with Atari 850 Interface. Actual shipping added. -$19.95

min

A2. Atari 850/Centronics Printer Cable. Works with above and other dot matrix printers. -$8.95 min

A3. Atari Dealer Demo Cartridge. 16K Dealer Demo in Centipede Case. Self-running. Shows advanced capabilities. Well executed programming tricks. Begins with multicolor Atari Logo with all colors displayed at once. Includes Household management, Recordkeeping (animated pencil), Home Entertainment (shows Star Raiders with different style tie-fighter), Investment Analysis, and Service Centers (draws U.S. map). Extremely rare. -$16.95 min

A4. AtariWriter Cartridge. Includes 50 page spiral bound manual, Quick Reference Card, and Helpful Hints fold-out card. -$7.95 min

A5. Atari Assembler Editor Cartridge CXL4003. With 79 page User's Manual and Programmer's Reference Card. -$8.95 min

Atari 8-Bit Computer/XE Game System Cartridges
A6. Miner 2049er (computer style) -$2.50 min
A7. Robotron: 2084 (computer style) -$2.50 min
A8. Final Legacy (computer style) -$2.50 min
A9. Joust (computer style) -$2.50 min
A10. Missile Command (computer style) -$2.50 min
A11. Super Breakout (computer style) -$2.50 min
A12. Barnyard Blaster (XE game system style - supports light gun *see below) -$2.50 min
A13. Flight Simulator II (XE game system style) -$2.50 min
A14. Millipede (computer style) -$2.50 min

Atari 8-Bit Computer/XE Game System Cartridges
(New in boxes with instructions - not sealed)
A15. Star Raiders II -$5.95 min
A16. Battlezone -$5.95 min
A17. Ballblazer -$5.95 min
A18. Rescue on Fractalus! -$5.95 min
A19. Desert Falcon -$5.95 min
A20. Thunderfox -$5.95 min

Atari 8-Bit Computer - Disks
A21. Pogo Joe (flip side for C64) disk -$1 min
A22. HomePak (flip side for C64), Batteries Included disk -$1 min
A23. Ken Uston's Professional Blackjack (flip side for C-64) with Operating Instructions manual. -$1.25 min
A24. Party Quiz Question Disk (General Edition 1), Suncom. Flip side for C-64. -$1 min
A25. F-15 Strike Eagle, Micropose disk -$1 min
A26. Blade of Blackpoole, Sirius disk -$1 min
A27. Twerps, Sirius disk -$1 min
A28. Spy vs. Spy and Spy vs. Spy II (Island Caper). Disk with Instructions. -$2.95 min
A29. Boulder Dash, First Star disk -$1.95 min

A30. Gruds in Space, Sirius disk -$1 min
A31. Repton, Sirius disk -$1 min
A32. Ali Baba and the Forty Thieves -$1 min
A33. Murder on the Zinderneuf, Electronic Arts. Complete in package with disk and instructions/reference card. -$2.95 min
A34. Nudmehi Replica 1+1 Backup and Utilities Program. Designed to back up all Atari software prior to 8/15/82. Includes Sector Disassembler, Sector Search, Disk Bitmap, RPM Speed Adjustment. Support for optional data disks (not included). Disk and Instructions. -$1.95 min
A35. CASDIS. Machine language program that converts Atari cassette-based programs to disk. Supports BASIC, machine language, and multi-load programs. With 28 page instruction manual. -$1.25 min
A36. Print Shop Graphics Library 3 with Reference Card. -$1.25 min
A37. Atari Word Processor Program Master Diskette -$1.95 min
A38. APX Insomnia Sound Editor with instructions -$1.95 min
A39. Ultima II Disk 2 Player Disk -$.25 min
A40. S.A.M. Software Automatic Mouth Disk, Don't Ask Computer Software -$1 min

Atari Controllers
A41. Light Gun. Works with XE system and 8-bit computers. Use with Barnyard Blaster (above). -$4.95 min
A42. Track and Field Controller (Blue with 3 buttons - 2 Run and 1 Jump/Throw). Works with 2600 and 8-bit Track and Field games. Very rare. -$12.95 min
A43. Standard Atari Paddle Controllers (pair) -$2.95 min
A44. Atari Standard Joystick (single) -$1.95 min
A45. Atari Standard Joystick (single) -$1.95 min
A46 Epyx 500XJ Joystick with Autofire -$3.95 min
A47. TAC-2 Joystick -$3.95 min

Miscellaneous
A48. Flip and File - Clear smoke colored plastic. Holds 10 8-bit or XE cartridges (elephant disk sticker on front). -$1.95 min
A49. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A50. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A51. BCs Quest for Tires Poster. Approximately 17x23.5 inches. $.50 min
A52. Millipede (8-bit) box (crushed). $.25 min
A53. Atari Enamel Olympic Pin (see picture in Summer 84 Atari Connection) -$2.95 min

Books/Instructions
A54. Inside Atari BASIC. BASIC programming book. Key concepts (full of type-in examples). Fundamentals of Atari Graphics. GTIA Graphics, Game Controllers. 183 pages. -$2.95 min
A55. Atari 410 Program Recorder Owners Guide (full color) -$.50 min
A56. Energy Czar Computer Program Instructions (20 pages) -$.50 min
A57. Disk Operating System II Reference Manual. 100 page DOS 2 reference manual. -$1.50 min
A58. APX Ultimate Renumber Utility Instructions -$.50 min
A59. Atari Haunted House (Creative Computing) Instructions -$.50 min

A60. Master Memory Map by Santa Cruz Software. 100s Important Memory Locations. Hints on Their Use. 14 pages of reference material. -$3.95 min

A61. Master Memory Map by Educational Software by Educational Software. 30 pages. How to PEEK and POKE., IOCBs, System Timers, Color Locations, Player Missile Graphics Registers, Bugs in Atari BASIC, Bugs in the O.S. Much more! -$4.95 min

A62. ANALOG Computing Pocket Reference Card. BASIC Instructions, XIO Command Codes, Sound Command Pitch Values, Player/Missile Area Layout. 6502 Assembler Mnemonics, Error Messages, Code Translation Table, More. -$3.95 min

A63. Atari BASIC Reference Manual in excellent condition. 100 pages, 3-hole punched. Originally shipped with Atari BASIC cartridge. -$8.95 min
A64. Atari 800 Home Computer Owners Guide. CO60057. Rev. 1 (full color). -$1.95 min
A65. Atari 810 Disk Drive Owner's Guide. CO60056. Rev. 1 (full color). -$1.95 min
A66. Atari 810 Introduction To the Disk Operating System Guide. CO60054 Rev. 1 (full color). -$1.95 min

> the desk?
>
> Thanks,
> Jay
>

Try to get a file called "XLoader.com", it will copy the old 800 Rom into
the XL's upper memory (16K) and then restarts the computer.
When you put a bootdisk in the 1050 it'll boot like a 800er an also run
Fort Apocalypse an the other older games. This program
was written by a german programmer in hamburg in middle of 1984.

have fun! :-)

-EXTSEL, when held low, disables the memory entirely. It is totally
disconnected from the address and data lines.

Bob

+EXTENB goes high in every cycle where the system is going to use RAM.
Activate -EXTSEL (pull it minus) and use EXTENB to select your PBI RAM.
simple??

I've been out of the newsgroup for a while, so excuse me if I've missed something big, but how do you use your 28.8 modem at a full 28.8 !? IE, how did you get your serial port above 19200bps!?

Is this a feature of ICE-T ?

Thanks; Ryan.

I would be willing to do the Action! manuals, but I won't be able to start
until at least Jan. (What about the copyrights on these manuals?)

Yes the X10 can be interfaced. There were kits for the Apple][and C64
at one time. You could also build your own controlled via the
joystick/paddle ports or RS232 or Parallel port. SIO would be messy
though.

This is true to a point. There is a BASIC XL runtime package that CAN be given away with BXL programs. While you can't sell the runtime program, you can sell the BXL program. I just wish they (OSS or ICD) had come out with a BXE runtime.

> Since I can't run TextPro without physically unplugging a

Are you running T-Pro under SpartaDOS? If so, there is a program you get with in the SpartaDOS Tool Kit called OSS.COM that allows you to turn off any OSS/ICD cart. Xon or Xon2.com are used to turn them back on again. Actually OSS.COM should be able to do that as well. By turning off the cart, it essentially removes it from the system while not actually physically removing the cart.

>
> The Shadow
I haven't seen this? I have run stuff on my 800XL and 130XE that I wrote in BASIC XL and XE (assuming BXE isn't using upper 130XE RAM), and all programs worked fine. I should try some on my 800. I just acquired this unit recently. I would guess that if the ML routine was written properly, it would work on all 8-bit systems.

Ryan,
Good question. Action! (as well as all of the OSS/ICD 8-bit products)is
currently the property of Fine Tooned Engineering. I wonder if Mike
would mind? Has ANYONE heard from him or knows how to contact Mike?

I discovered this when I submitted a bunch of games to
Compute!, ANTIC, and Analog. Nobody would touch
anything in Basic XL. But it makes me wonder why any
of them published stuff in Action.

>With a few short in-line USR routines, you could do anything
>BXL/BXE would do with standard Atari Basic, and make your

Well, the one thing you can't duplicate is the inherent
increase in execution speed of a Basic XL/XE program.
The same Basic program (in case anyone is not aware;
BASIC XL/XE will load Atari BASIC SAVE'd programs just
fine) runs much faster on Basic XL/XE.

>Since I can't run TextPro without physically unplugging a

The only thing I'm aware of is that the move function on my
BASIC XL cart behave differently between the 800 OS B (works
right there) and XL OS (works wrong there). Loading the
Translator on the XL fixes the problem. Otherwise, I've
noticed no problems with BASIC XL.

>If you still have it, I'd be really keen to see the Traveller char gen.
>That's one seriously good game.

I'll see if I can find the source. It was such a large program that I had to use the technique of ENTERing lines of code from disk for the different character classes.

3643. 1200XL OS Upgrade Question.

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-24 00:00:00 UTC
From: Graham Thornton <dangermouse@prodigy.nospam.net>
Message-ID: <01bcf903$aac226c0$b0f7c9c7@dangermouse>
Source record: 68389

Having run into many software incompatibility problems with my 1200XL, I decided to implement the first part of Bob Wolley's PBI upgrade to give me an updated XL/XE operting system. Note that I don't want a PBI, just the updated (debugged?) operating system.

The donor machine was a 130XE with toasted memory chips, and following the instructions I downloaded from Craig Lisowski's site, I have installed the OS chip and the updated MMU into my 1200XL.

The Atari logo screen has gone, the self-test works fine, and a number of software titles that previously failed do now work, including the Big Atari Demo. But several others still fail miserably, including a hack of Bounty Bob Strikes Back and the cartridge version of Blue Max. One or two that worked OK before now also fail, including Black Lamp. All of these worked fine on my PAL 800XL, so does this sound like an NTSC/PAL type problem, or have I screwed up something during the upgrade.

More to the point, does installing a 130XE operating system chip and MMU into my 1200XL give me a 64K 130XE or do I just have a mongrel 1200??. Is there anything more I can do to improve 800XL/130XE compatibility short of swapping my 1200 for one of the updated machines?

Any help appreciated.

Graham

Here's what I do. Put a copy of a Dos program in Drive 1.
Put a copy of your Games002.atr in Drive 2. Then start the emulator.
If you don't get a Dos menu right away, type DOS and you will get it.
Then, just hit '2' (for drive 2) and the whole list of games will
appear. To run a game, type 'L' (for load). Then type D2:(Name of
game). Hit enter, and the game should start!
Note- I use the Dos program 'MyDos45d.atr' for drive #1.
It's just like having an old 666 sector blank floppy disk!
I posted a copy of MyDos45d.atr in:
alt.binaries.comp.atari8bit

(Also, make sure you've UNchecked the 'Basic Cart.' option under
Setup/Environment.)

> I wonder how hard it would be do do an RGB output board for the
> XL/XE systems? RGB would certainly be much sharper and a lot
> more vivid than composite or split Chroma/Luma.

The XL series basically put us out of business ;-(because it didn't have any expansion slots....(and came loaded with memory too...). Our board was designed to plug into the last slot of the 800 only.

So our board would not be of any use to you.

I would guess you would have to put the entire board, and the console software, in a cartridge that would plug into the back port. I don't know the pinout of the back port, but that's not that difficult to get ahold of.... but you'd basically have to completely re-do the PC design and layout....almost start from scratch for that matter. I don't know how compatible the console software would be with the XL either...

I guess in a nut shell....not THAT easy, but I'm sure it could be done.

Austin

3646. Dir Nary PAL-NTSC Upgrade

Source record: 68393

Fair comments. Point is though that all the 8bit emus aren't that great when compared to emus for other systems: C64, MSX, MAME etc. Wonder why this is? Seems to be an almost grudging attitude by emu authors when it comes to getting things right. That's where the commercial emus come in to their own: if your selling something as shareware or whatever you have to put in that extra effort to get things right.

Gareth Davies.

Hello,

Can anybody tell me where I can get SpartaDos X 4.22, which I think is
cartridge based? I've heard (seen) on the newsgroup that it's available
from both Best Electronics and Fine Tooned Engin. Which one is it?
Also, any idea about how much it costs?

Thanks
Jay Yepuri

>have to put in that extra effort to get things right.

I think I see what you are trying to say; however, some of the examples you have given are FREE. The C64 emu, as I understand it, suffers from the same restraints as the Atari 8bit emus. MAME is FREE and is GREAT!! But that's because brilliant people have been working on it! Also, I understand most of the MSX stuff is free as well, but since I don't know anything about it, I'll not say anything. :o)

I have said this before and am glad to see someone else make the same comment. It's pathetic that the free emu's are so much better than the commercial ones.

Point is, your comment about extra effort in regards to commercial emus simply doesn't hold water. The best ones are still free and it is simple greed to ask money for a crippled product!!!

If anyone wants to know what a great commercial emu is, check out Executor(an emu that emulates Macs on a PC). This is a great piece of software that reall pisses off my Mac fiends!!!

RGB itself would not be so hard, but where would you get a monitor? An
old ST color monitor would work, but not a VGA or CGA from IBM.....

------
one aspect of the 1200XL is that Basic does not really exist as a ROM
when you do the upgrade. This may leave the 8K region at $A000-$BFFF
disabled as far as the hardware is concerned. The OS checks the Basic
ROM status in two different forms - and it gets screwed up sometimes.
Try at least holding OPTION down whenever you have a strange problem.
Does not explain the problem with the BlueMax cart, though.
A modified 1200XL is not a duplicate of an 800XL, I'm afraid.

Bob Woolley

3656. Artifacting

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-24 00:00:00 UTC

Message-ID: <347a6c38.43670800@news.primenet.com>
Source record: 68402

After reading a post here, I tried color artifacting using XL-IT.
Wow, what a difference. Is this just type of intentional aliasing
or what? You can't really do high frequency boost with these
multi sync monitors, so what's going on here?
TIA

Hi, I've got an Amiga 3000, and tho the sio2pc/ape software
won't work on the ami, I've got the 286 bridgeboard w/ a
serial card plugged in. APE wouldn't run on the 286 bb, but
sio2pc works fine, and the software w/ the bb will let you copy
stuff back and forth to the amiga side of the system...
i think the sio2pc cable will work as is on the ami, but someone
just needs to write the software for it... if anyone has any
technical info about what happens during a serial xfer, and how
the pc port is set up to do it, i might be able to work something
out...

re: De RRe Atari...

Mercifully my copy of De Re Atari was not at ground level when
the house flooded this summer (9.5" in the middle of the night,
in my bedroom!) I did have a few dozen disks get wet, and
some photocopied manuals, but I picked these up at a hamfest,
so it's not that big a deal. Thank goodness all my actual Atari
Books were not in the water.

If you could OCR this all and send (mail) it to me to proofread and
reformat then I'll post it when I'm done cleaning it up.

Also, if anyone has a copy of the manual and can run an emulator
to get color screen dumps of all the example programs and also
the sample screens that would be most excellent (read: De Re Atari
on a web page.)

BTW, some of the material is rather dated (and occasionally
wrong and often confusing). I'm thinking of adding a
section/appendix/epilog to each section/whatever of commentaries
about the original contents. Anyone who believes they posess
a programming clue about the Atari 8-bits is encouraged to

write. Better example programs? Better explainations?

Would be my emulator of choice, but that it doesn't run Jumpman (well, not really... The little guy seems to sink into the floor, due to some kind of weird P/M collision detection bug, maybe), nor does it run Autoduel (in fact, neither will Atari800, Atari800Win, nor Pokey.. only way I've gotten it to work is PC XFormer 3.6, which doesnt support artifacting & therefore causes this game to look kind of strange)

Only reason I have this one is for playing Autoduel... youu're right, the sound is terrible.. still, I won't really criticize, the guy who wrote this emulator is definitely smarter than *I* am (I wouldn't know where to begin...)

Which ROMs?

For some reason, when I first ran this emu, it ran fine in non-windowed DirectDraw mode, until I took it out of that mode, to see if it might run faster.. now it's stuck in standard windowed mode, and on my monitor the window is about 5" by 3"! So, until I get my DirectX straightened out I won't be squinting much at this one :)

The DOS version of this emu is good, other than the lack of sound support (none whatsoever on the current PC version, though the Linux and maybe Amiga versions have it... ah, well, maybe next time...)

> 4) Rainbow

>

this one seemed to me to be the least compatible with a real Atari... many games wouldn't run on it... I may not have the latest version though.. the idea of hooking up a real POKEY chip to the PC is neat but I don't much want to sacrifice a real Atari to build a sound device for an emulated one... would the POKEY in a 5200 work, I wonder? hrmmm...

> PS. Please feel free to flame my opinions & add some of your own.

Out of curiosity... are these games the ones with those "invisible ink"
hintbooks? if so.. have you checked to see if they still work? I bought
Hitch Hiker's Guide about 10 years ago, and 5 yeas later the hintbooks
didn't work.. you could read the ones somebody had already gone over with
the "invisible" marker (just barely, you could read them), but the ink
didn't seem to be there on the ones that were still unused.. or maybe my
marker was dry (or both?)

: Any help email semslie@aol.com

You shouldn't need a modulator since a stock 800 has a modulator built in.
The cable out the back of an 800 can hook to a TV with a switch box or
balun, no other modulator should be required. Without a cartridge
installed, the machine should enter the blue screen "memo pad" mode at
power up. With a BASIC cartridge you should get a blue screen with the
BASIC "READY" prompt.

Contact Bob Puff at:

Computer Software Services
P.O. Box 17660
Rochester, New York 14617

Ordering line (716) 429-5639
The Black Box runs about $199. I got mine 2 years ago and I havent regreted it for a moment. Brings your Atari to a whole new level. I can say for Bob that he's always there for his customers, and never too busy to answer a question.

As always, I've got a lot of ideas for games. :)

And here they are, for your entertainment. (Please, not betting on what games I actually finish :))

Drum roll, please:

1. "Volcano Task Force" - If you've ever seen Zuider Zee (a game where you fix dikes on an island and pump water from here to there) or heard of the movie "Volcano" (where a volcano erupts in the middle of a city), it's kind of a combination of both. :)

2. A "Barrack" clone - it's KIND of like QIX, but different. It's for the Mac. There are bouncy balls on the screen and you, a little bar which can rotate 90 degrees. You shoot lasers out of both ends and if they touch a wall, they become a wall. Areas with no balls in them become filled up, thus bringing you closer to the "threshold" at which you beat the level. I'd probably need to make this a TrakBall/Mouse supporting game...

3. "Sandwich Time" - there's only one Burger Time clone I've seen for the 8-bit. It's not bad, but it's flickery and slow and written in TBXL. I'd like to make one in Action! using sprites (maybe) and my new SIFE graphics mode (for more colors!)

4. "Sludge 2" - A spruced up version of my Pipe Dreams clone, "Sludge."

5. A "Rampage" clone...? Maybe.

6. A "Bust-A-Move" clone. Gem Drop was the first step towards this. This would prove a challenge, though!

7. I need to finish "Mah Jongg."

8. I need to finish "Aster Blast."

9. I need to finish "Sea Fight."

10. I'd KILL to do a cool fight game! :) (Nobody say ANYTHING about this! All I ever get when I mention this is Glenn Saunders saying not to bother. :))

Wish me luck!

-bill!

How so? Move work as documented on my 130XE. Observe the cautions and
comments and all is well, as far as I can see. I've used it many times.

It's available at http://aegis.mcs.kent.edu/~clisowsk/index.html

There are reportedly some minor (?) differences between this and the
version published in (I think) Current Notes.

BTW, don't do Woolley's 1200XL Clearpic mod, get the Atari Classics
issue (December '93 I think) with Super Video 2.1 and do that instead.

It might not explain the problem.... but it does fix the problem!

I did not install the BASIC chip when I did the upgrade, since one of the reasons I like the 1200 so much is that I don't have to hold down OPTION for practically every disk I want to load. (the other of course is the keyboard)

I started wondering if my modified 1200/pseudo 800XL might think BASIC was enabled even though the chip phyisically wasn't present. Holding down OPTION fixed the problem with Blacklamp and the Blue Max cartridge. I am still having problems with Bounty Bob, but after all that is a hack so who knows where that problem may lie.

Graham

PS. Bob, thanks for the 1200XL OS and video upgrades - they are excellent!

Is the Super Video upgrade different from the revised Clearpic modification
described at http:\\www.atarihq.com\atcomp ????

The revised Clearpic requires the replacement of about ten components
(mostly resistors and capacitors) and takes about half an hour for someone
with beginner-level soldering skills like me. This is the video
modification I used and the results are amazing, but Iwould be interested
to know if there is an even better one available.

Thanks

Graham

FTe is pretty much gone now as far as I know, whereas Best just released a new Atari catalog. Best is at 408-243-6950. Their catalog costs $7.50 and is well worth the price. It's the most complete Atari catalog ever with pictures, diagrams, and specs, along with what's available (and, of course, the prices). It's pretty much a good general reference book for Atari users.

The last I knew, it was still available. It was sold
as a package if I remember correctly. Included (2) 130xe's,
(2) software cart's, (1) Indus drive, (2) modems. The cable
company in the next little town from here still uses this
set up. If your interested, I can check and see if the stuff
is still available......

Source record: 68426

I must have a bad copy of Ice-T 2.71. I d/led it from Genie about a year ago before I left there for Delphi, and only now am I getting to try it. I can't get it to work at all. Seems to be a bug in the keyboard handler or something. Everywhere I go to use the keyboard for anything other than maneuvering through menus, I get a steady stream of "j"s, like this: jjjjjj. Try to change the path and the blank fills in with j's. Samething when trying to enter filenames and on the term screen itself. If I hit a key, that character shows up but is quickly is drowned in j's.

I'm using a 320k Ramboed 130XE with an Indus drive and an XF551, and a 14.4k modem through an 850. (no, I'm not trying to run the modem any higher than 9600) It didn't matter whether I had Mydos configured with a RAMdisk or not, same thing.

Am I doing something wrong? If not, where can I get new copy of Ice-T 2.71? Delphi doesn't have one and I haven't progressed to the point where I can download through the Internet. That's what I wanted Ice-T for...

3695. 2 computer Interface

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-25 00:00:00 UTC
From: mathy.van_nisselroy@stackbbs.xs4all.nl
Message-ID: <880587557@stackbbs.xs4all.nl>
Source record: 68429

Howdy folks

I finally found the time and the courage to try out the "Zwei Rechner Interface" I soldered together a couple of month ago. It's an interface designed by Thomas Grasel from Germany (tgrasel AT cware DOT de) which let's you connect TWO 8 bit Atari's to one chain of SIO devices. The chain is electronically switched to the computer that get's one the bus first. 10 seconds after this computer has last accessed the line, the line becomes available to the second computer.

This is really COOL dude(tte)s!!!

Now I can have two computers switched on at the same time, without having to plug and unplug those SIO-cables.

And it cost only DM 60 (U$D 30) for the kit, or DM 90 (U$D 45) for the "plug and play" model.

So I tried:

RockMan by Mirage Software (c)1995
Sexy Six by SikorSoft (c)1995
Draconus by Zeppelin Games (c)1988
And even a very nice and very Xrated demo which I guess I found on The Last Hope BBS, called Sexuale.

Worked great. And I even found out that my XEGS doesn't have the Graphics 9 bug.

BTW RockMan is a platform game, just like Draconus (which is the only English piece of software, the rest is Polish), Sexy Six is a version of MasterMind (you're supposed to get rewarded with the picture of a nice woman, but I haven't played it much

yet.).

The demo has "some" Polish text, but
with these kind of pictures, who
cares? (Maybe the pope :-))

While I agree with this statement, it doesn't answer the question. I have two perfectly good 8bit Atari's that are packed away. They aren't easy to get out and I don't have anyplace to set them up anyway. It should certainly be possible to create an emulator that would run decently on a modern pentium PC. Its been six months or more since I've had time to read this newsgroup and I find it disappointing that emulators haven't made much, if any, progress in that time.

> TIA

OK, here's the complete story on "artifacting" from a student who's studied color (colour) TV systems in length:

1st point.

Artifacting on Atari 8-bits ONLY works on NTSC machines. It is JUST NOT AVAILABLE on PAL machines.

This is because on NTSC machines, the dot frequency is twice the color sub-carrier frequency. It is possible to generate psuedo color information simply by placing alternating dark/light dots on the screen. On PAL machines, the dot frequency is slightly lower than twice the colour frequency (I think it's something like 8/5 times) so alternating dots do NOT get interpreted as colour information by the decoder.

2nd point.

Artifacting only works in Composite Video connections.

To clarify this, RF is (to me) a subset of Composite, and both of them exhibit artifacting. S-Video DOES NOT show artifacting; an NTSC display with artifacted images looks much like a PAL one would - just fine vertical stripes. It is possible to achieve artifacting in "S-Video" by substiting Composite for Chrominance, but then you get even nastier luminance interference than in Composite, and the fine vertical stripes remain superimposed over the now-coloured areas. In short, the only good way to view artifacted images properly is in Composite (unfortunately)

3rd point.

Artifacting has NOTHING to do with the dot frequency being high.

It's all due to the dot frequency being directly related to the color frequency (on NTSC machines, as stated). No TV sees 3.58MHz as being particularly high; it's certainly not as if the alternating pattern coincides with particular triad dots or something. The artifacted areas get filtered out by the 3.58MHz notch filter in an NTSC decoder and end up in the chrominance channel with all the "proper" chrominance information, not in the luminance channel where there were actually

generated.

4th point.

Only 2 (TWO) new colors are available using artifacting.

These correspond to dark/light and light/dark dot patterns. The two colors, whatever they are, are each other's complement. Believe it or not, I've NEVER ACTUALLY SEEN artifacting work, since I don't have access to an NTSC atari and monitor yet. This entire email is based on my knowledge of atari hardware and the PAL & NTSC tv systems. Note that since the artifacted color information is superimposed on top of "real" chrominance dots, the two "new" colors depend on what background color the screen is using (GR.0 or GR.8 of course)

5th point.

Artifacting only works in GR.0 or GR.8

Of course, the proper mode names to quote are the Antic graphics modes, but since I don't have any *decent* atari books I can't quote them here. Anyway, the reason artifacting only works in these modes is because these are the only ones where the dots are small enough to simulate chrominance information - ie. in all other modes the dot frequency is the same as the color frequency, half of it or even a quarter of it. Only double the color frequency works, because you need two pixels for each cycle of the color subcarrier.

6th point.

Artifacted colors should not vary between TV's

This is because the color depends on the phase of the artifacting "waveform", and that is a function of the GTIA chip timing. It may vary between revisions of GTIA, and between GTIA and CTIA - again I haven't seen it so I can't really comment. However, I'm sure that if they do vary it's not by much, so it ought to be possible for emulator coders to emulate them closely. Anyone reading this far who is writing an emulator is welcome to mail me for my thoughts on how the exact filtering-out of artifacting should be emulated.

Anyone reading this far deserves a medal, but thanks for your time. Any comments?

re: 2600 games ...

I know this is off-topic, but did anyone ever do this weird
trick with Adventure? As soon as you get the goblet to the
yellow castle and win the game, the game makes a sound to let
you know that you won. As it makes the sound, hit Reset.
It'll play a really ODD set of notes! In fact, I did that
so often, that that's how I remember what the game does when
it ends! It never harmed either VCS or cartridge, as both are
still in excellent shape...

Why worry about the format part? If the drive can be successfully
interfaced with the Atari8, then presumable it could be formated by
the atari... but who knows. Also, since 16MB is smaller than 100MB,
the disks would have to be partitioned. Lots of issues here.

> -----
> RGB itself would not be so hard,

I guess that depends on your definition of hard ;-) It's not that easy to do...it's quite a lot of circuitry to convert from Chroma/Luma to RGB... Unless I'm missing something here....but Chroma/Luma is an analog signal...and you'd have to A/D it, separate it into RGB, and re-generate synch signals etc.

> but where would you get a monitor? An
> old ST color monitor would work, but not a VGA or CGA from IBM.....

As long as it's digital (not analog....as VGA is...) RGB...all you need is one that would support 80x25 characters, and I believe the characters were 7x9, so 7x80 or 560 x (9x25) or 225. 560x225... and I don't remember the frequencies...but it wasn't that bad. Basically, the way we generated RGB was with additional attribute bits. Remember blinking characters? Well, that was just an attribute bit...so we just added 4 additional ones, R, G, B and I (intensity). There was also a cursor attribute bit, and inverse video. The frequency was the same as for the composite output, as it was the exact same output, just digital, and with the additional attributes...

(Sorry it took me so long to catch this)
Filenames are used to access already existing files but we wouldn't want
windows hanging around after we close the S: device.So filenames would be
useless.(plus you can only have 8 files opened at a time)
SO forget about that "S2:1:3" stuff;you'd probably use AUX3 or something to
choose what screen/window/band to talk to.

I think it took up more than 4k of RAM!
It uses most of the 14k of shadow RAM (under the OS ROM).
I think that the disk buffers alone took up 4k.
(providing you used all 16;it just seemed to waste memory to take up less)
You'd think that they could get it to run straight from the cartridge.
It gives you a 8k window.Austin's 80-column interface only had 256(?) bytes at
a time to work with.

>confirmed! _WOW_!!! That is _REALLY_ Cool!!!!

Remember that the Commodore also has something akin to a inter-line interupt.
These can be used to mix text and graphics modes.
(this is what the Commodore 128's BASIC does)
Even without interupts the Commodore can change the palette for every
4 (colour-clock) by 8 (scan-line) block.(the size of a 40-col character)

But multi-sized text is the domain of the Atari.
(though multiple graphics modes have nothing to do with DLIs)

>> I think she'd prefer 80 columns, so I'm wondering...Austin, do
>you have any idea

Well if she just wants to print in 80-columns then she can make each logical
line two physical lines long.That's what I used to do when writing to my
beloved using Textpro.It'll come out as 80-columns on the printer.
That is,only use a RETURN charcter every other line.
You can also put a "set 80-columns" code into the beginning of the file.

>> if your 80 column board would work with Textpro?

I assume that only programmes that use the CIO (the "OS"),like BASIC,will work
with Austin's upgrade.IT wouldn't matter anyway;if Austin's upgrade somehow
"scaned" video memory to know what to put up on the screen all the characters
from TextPro would appear on the left side of the screen.
(puting aside the possibility of puting two 40-column lines side-by-side on
each 80-column line,of course)
Of course you can use TextPro's "print" command to send the file out the "E:"
device so that you can preview the file in 80-columns.Otherwise you're stuck
with GR.8 80-column text editors.Someone needs to make a fast 80-column
text editor that works like Ice-T's 80-column display.
(it's fast!)

Speaking of TextPro;my new X2 USR Sporster modem doesn't let me use Y-MODEM.
TeleMate gave me files with garbage at the end (ala X-modem 1k) and Telix gave
me a file with the Y-MODEM 128-byte header prepended to it.I tried to edit the
header out on my PC but none of the text editors would function corectly.
(limits on line-length and ASCII-code content)
I had to SIO2PC it over to my Atari to use TextPro to edit it.
(shades of my Oasis days)
It was going that way anyway;it was a Atari file.

>or maybe it is 361,362...- I am not sure) except that directory
>takes only 4 instead of 8 sectors.

The VTOC is in #360.In MYDOS,if the disk is too big
(read "anything but single density or RAM disk")
for one VTOC sector to keep track of then it uses #359 to keep track of the
excess,then #358 and so forth.DOS 2.5 uses #1024 in place of #359.
361-368 are the directory sectors.

Well what are the other 4 dir-sectors filled with?
If they've never contained files before (that have since been deleted) then
they would contain zeros.

>AFAIK MyDos uses also 8 sectors per directory, so it has to be some
>other dos.
>SuperDos, BiboDos, DosXL, AtariDOS 3.0 ?

DOS XL uses normal DOS 2 disks.

Jon,
The ZIP disks can't be formatted by the user. I've tried. You just erase everything. A driver would have to have a way to read/write/update MS-DOS or MAC format. Since MS-DOS format is more similar to the Atari disk formats. This would be the preferable format to work with. I suppose it would be best to attach a SCSI ZIP drive to a Black Box instead of an MI/O since there is an MS-DOS mod for accessing MS-DOS format disks for it. The ZIP drive is seen as a rather large floppy drive not a hard drive. This may or may not be a good thing. For the BB with the MS-DOS mod, this may be a benefit. I'm no guru on the BB. I own an MI/O. I'd prefer a BB, but this is wat I have and I got it cheap. I'd like to hear from anyone that has actually gotten a Zip drive (any interface and format) to interface and actually work with the 8-bit. I also want to know what you did to accomplish this feat. AND. If you've written a driver or other software to utilize it, could you please document and share this info and programs?
Inquiring minds want to know!!!

dklugh,
All DOSes for the 8-bit must provide a minimum of info to the computer's OS (at least the Page zero pointers). I suppose that if that info was all that was needed, the rest could actually be able to run from the cart. There would have to be a very small hunk of program to do the bank switching and routine pointing into the open bank to access the actual routines, but that could be very small as well. The only things left would be system vars for configurations (config.sys and some stuff from Autoexec.bat) that would have to be stored and protected. Lastly would be buffers and open file pointers and disk access pointers. The pointers would only take up 3-4 bytes per file and/or drive and at least one page per buffer. Hmmm... looks like even at a minimum we're talking close to 4K. I guess ther's no getting around it.

3719. Atari 8-Bit Dealer Demo/Printer/Printer Cable/Assembler Auction

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-26 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971126134200.IAA19666@ladder01.news.aol.com>
Source record: 68354

December Auction - Update 2

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). Without paper separator (wire rack). Supports near letter quality print. Handles friction feed or fan-fold paper. Very nice condition. Works well with Atari 850 Interface. Actual shipping added. -$19.95

min

A2. Atari 850/Centronics Printer Cable. Works with above and other dot matrix printers. -$8.95 min

A3. Atari Dealer Demo Cartridge. 16K Dealer Demo in Centipede Case. Self-running. Shows advanced capabilities. Well executed programming tricks. Begins with multicolor Atari Logo with all colors displayed at once. Includes Household management, Recordkeeping (animated pencil), Home Entertainment (shows Star Raiders with different style tie-fighter), Investment Analysis, and Service Centers (draws U.S. map). Extremely rare. -$19 grabben

A4. AtariWriter Cartridge. Includes 50 page spiral bound manual, Quick Reference Card, and Helpful Hints fold-out card. -$7.95 min

A5. Atari Assembler Editor Cartridge CXL4003. With 79 page User's Manual and Programmer's Reference Card. -$8.95 min

Atari 8-Bit Computer/XE Game System Cartridges
A6. Miner 2049er (computer style) -$2.50 grabben
A7. Robotron: 2084 (computer style) -$2.50 steg
A8. Final Legacy (computer style) -$2.50 min
A9. Joust (computer style) -$2.50 min
A10. Missile Command (computer style) -$2.50 min
A11. Super Breakout (computer style) -$2.50 min
A12. Barnyard Blaster (XE game system style - supports light gun *see Item A41 below) -$2.50 min
A13. Flight Simulator II (XE game system style) -$2.50 steg
A14. Millipede (computer style) -$2.50 min

Atari 8-Bit Computer/XE Game System Cartridges
(New in boxes with instructions - not sealed)
A15. Star Raiders II -$5.95 min
A16. Battlezone -$5.95 min
A17. Ballblazer -$5.95 min
A18. Rescue on Fractalus! -$5.95 steg
A19. Desert Falcon -$5.95 min
A20. Thunderfox -$5.95 min

Atari 8-Bit Computer - Disks
A21. Pogo Joe (flip side for C64) disk -$1 min
A22. HomePak (flip side for C64), Batteries Included disk -$1 min
A23. Ken Uston's Professional Blackjack (flip side for C-64) with Operating Instructions manual. -$1.25 min
A24. Party Quiz Question Disk (General Edition 1), Suncom. Flip side for C-64. -$1 min
A25. F-15 Strike Eagle, Micropose disk -$1 min
A26. Blade of Blackpoole, Sirius disk -$1 min
A27. Twerps, Sirius disk -$1 min
A28. Spy vs. Spy and Spy vs. Spy II (Island Caper). Disk with Instructions. -$2.95 min
A29. Boulder Dash, First Star disk -$1.95 min

A30. Gruds in Space, Sirius disk -$1 min
A31. Repton, Sirius disk -$1 min
A32. Ali Baba and the Forty Thieves -$1 min
A33. Murder on the Zinderneuf, Electronic Arts. Complete in package with disk and instructions/reference card. -$2.95 min
A34. Nudmehi Replica 1+1 Backup and Utilities Program. Designed to back up all Atari software prior to 8/15/82. Includes Sector Disassembler, Sector Search, Disk Bitmap, RPM Speed Adjustment. Support for optional data disks (not included). Disk and Instructions. -$1.95 min
A35. CASDIS. Machine language program that converts Atari cassette-based programs to disk. Supports BASIC, machine language, and multi-load programs. With 28 page instruction manual. -$1.25 min
A36. Print Shop Graphics Library 3 with Reference Card. -$1.25 min
A37. Atari Word Processor Program Master Diskette -$1.95 min
A38. APX Insomnia Sound Editor with instructions -$1.95 min
A39. Ultima II Disk 2 Player Disk -$.25 min
A40. S.A.M. Software Automatic Mouth Disk, Don't Ask Computer Software -$1 min

Atari Controllers
A41. Light Gun. Works with XE system and 8-bit computers. Use with Barnyard Blaster (above). -$4.95 steg
A42. Track and Field Controller (Blue with 3 buttons - 2 Run and 1 Jump/Throw). Works with 2600 and 8-bit Track and Field games. Very rare. -$12.95 min
A43. Standard Atari Paddle Controllers (pair) -$2.95 min
A44. Atari Standard Joystick (single) -$1.95 min
A45. Atari Standard Joystick (single) -$1.95 min
A46 Epyx 500XJ Joystick with Autofire -$3.95 min
A47. TAC-2 Joystick -$3.95 min

Miscellaneous
A48. Flip and File - Clear smoke colored plastic. Holds 10 8-bit or XE cartridges (elephant disk sticker on front). -$1.95 min
A49. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A50. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A51. BCs Quest for Tires Poster. Approximately 17x23.5 inches. $.50 min
A52. Millipede (8-bit) box (crushed). $.25 min
A53. Atari Enamel Olympic Pin (see picture in Summer 84 Atari Connection) -$2.95 grabben

Books/Instructions
A54. Inside Atari BASIC. BASIC programming book. Key concepts (full of type-in examples). Fundamentals of Atari Graphics. GTIA Graphics, Game Controllers. 183 pages. -$2.95 min
A55. Atari 410 Program Recorder Owners Guide (full color) -$.50 steg
A56. Energy Czar Computer Program Instructions (20 pages) -$.50 min
A57. Disk Operating System II Reference Manual. 100 page DOS 2 reference manual. -$1.50 min
A58. APX Ultimate Renumber Utility Instructions -$.50 min
A59. Atari Haunted House (Creative Computing) Instructions -$.50 steg

A60. Master Memory Map by Santa Cruz Software. 100s Important Memory Locations. Hints on Their Use. 14 pages of reference material. -$3.95 min

A61. Master Memory Map by Educational Software by Educational Software. 30 pages. How to PEEK and POKE., IOCBs, System Timers, Color Locations, Player Missile Graphics Registers, Bugs in Atari BASIC, Bugs in the O.S. Much more! -$4.95 min

A62. ANALOG Computing Pocket Reference Card. BASIC Instructions, XIO Command Codes, Sound Command Pitch Values, Player/Missile Area Layout. 6502 Assembler Mnemonics, Error Messages, Code Translation Table, More. -$3.95 min

A63. Atari BASIC Reference Manual in excellent condition. 100 pages, 3-hole punched. Originally shipped with Atari BASIC cartridge. -$8.95 min
A64. Atari 800 Home Computer Owners Guide. CO60057. Rev. 1 (full color). -$1.95 min
A65. Atari 810 Disk Drive Owner's Guide. CO60056. Rev. 1 (full color). -$1.95 min
A66. Atari 810 Introduction To the Disk Operating System Guide. CO60054 Rev. 1 (full color). -$1.95 min

Looks to me like Atari left in the code to handle the F-keys and the LEDs.

The F-keys still work just the same, providing cursor movement, pause,
alternate
character set etc, and the LEDs still flash during the memory self-test.
The 800XL/130XE self-test even includes the 1200 keyboard layout so I can
test the function keys.

Graham.

I have the following Atari stuff forsale. Please make an offer.
I'm willing to separate, but I'd prefer a bulk buy. Buyer pays
all shipping (I live in the Chicago, IL area).

Thanks.

2 410 Cassette Drives
1 Xetec Graphix AT Printer Interface
1 Supra MPP Printer Interface
1 ICD P/R Connection
1 BASIC Cartridge
1 Star Raiders Cartridge
1 AtariWriter Cartridge
1 Centipede Cartridge
1 Music Composer Cartridge
2 Atari BASIC Manuals
1 Atari BASIC Book

> I must have a bad copy of Ice-T 2.71.

It's probably not a bad copy, but a handler/dos combination problem. I tried many before I was successful, and darned if I can remember what finally worked! However, if you would like 2.72, I'm pretty sure it's at UMICH. I use the PC for most on-line activities, which kind of spoiled me, but I know that with a little playing you can eliminate that "screaming j" problem.

Hello,

Just a quick note here to let you know that I have a list of
things for sale at the following web page, and one of them is
an Atari 800 computer.

http://www.albany.net/~racasper/in15.htm

Thanks,
Robert Casper

>
> Artifacting on Atari 8-bits ONLY works on NTSC machines. It is JUST NOT
> AVAILABLE on PAL machines.

I'm not going to disagree with any of the technical information
you mentioned, because I can't. However, it is possible to
get an effect similar to NTSC Artifacting on a PAL system. I
wrote an article and a game using it for Page 6/New Atari User
some years ago.

The effect is weaker, and you need to turn the TV Colour up to
see it. The patterns are not as simple either: stripes DO work
but they need to skip a line (or so) every two stripes.
Checkered patterns which skip columns also work. In this way
I could get green, red, yellow and violet.

Another problem which cropped up - don't ask me why - was
that sometimes the colours would switch between boot-ups.
The only way I got around this was by permitting the user to
horizontally scroll the entire screen by one colour clock if
the colours weren't right.

This may or may not be connected to NTSC Artifacting. I'd be
interested to find out the truth.

I love this. Regarding hooking up an SIO2PC cable to an Amiga, Ron says, "but someone just needs to write the software for it..." What a great kidder, that Ron. I'm sure Ron is using the word "just" in a sort of tongue-in-cheek way. Of course we all know that writing good software is not a trivial task and requires many hours of work, and we all appreciate the people who choose to do it. We show appreciation by always paying the shareware costs requested when we find that we like to use the software. That's why shareware authors are so rich! :)

Wow, what a great reply to a good question. Richard Atkinson's reply should be included in the FAQs.
Even though simulating artifacting could be tough for all possible combinations of pixels, it's great if it can be simulated for the simple black and white pixels that give rise to purple and green (and orange and any others?), like in the Apple ports (Conan, for example). Does XLit do this?

Well, in fact the sectors are used by a file and the information in VTOC
concerning the number of available sectors says that on the disc $02C8
sectors
are available.
For MyDos it would be $02C4 and $02C3 for Dos2.5. So the image had to be
written with another strange Dos, that uses 5 additional sectors:
720, and 4 dir-sectors for SD and DD discs.

I know nothing about SuperDos and BiboDos. Could it be one of them?

>What is it the 'Black Box' does?
>
>Thanks,

The Black Box is an add-on Board for your 8-Bit that plugs into the PBI port
of the XL or the ECI and cartridge ports of the XE.
Its four primary function are:

1) Rs-232 serial modem port supporting hardware flow control can go up to 19.2
2)Parallel Printer port. Interfaces to most Centronics printers. Allows
buffering of data to be printed and graphics and text dumps from screen to
printer at the touch of a button.
3)SASI/SCSI hard disk port. Can have up to 96 partitions of up to 16 Mb per
Hard drive. Uses full sector on 512 byte sector drives.
Can also have a partition be 720 sectors and sector copy programs so that they
will boot at HD speed.
Compatible w/ MIO formatted drives by simply setting a DIP switch.
4)Operating system enhancements- 6502 monitor. Speeds operation to floppy
drives if they are capable of high speed mode

In addition there is an add-on for the Black Box called the floppy board that
lets you plug in HD floppies like a 3.5" 1.44 mB to back up your hard drive or
store programs on these disks. I think of them as miniature Hard Drives

I used the move command to scroll a text window in a couple of
programs. It works on the Atari 800. It doesn't work on my
800XL. The window becomes more and more garbled... It looks
similar to what happens when the narrow playfield bit is set
but the OS keeps working with 40 bytes per line. The cartridge
version is 1.02

>These can be used to mix text and graphics modes.
>(this is what the Commodore 128's BASIC does)

Using that interrupt is the only way to mix modes on the 64.
2 text, and 2 graphics modes AFAI recall. Whooo-peee.

>Even without interupts the Commodore can change the palette for every
>4 (colour-clock) by 8 (scan-line) block.(the size of a 40-col character)

It doesn't change the "palette", since there is no color indirection
involved with this. And the programmer has a choice of 16 marvelous
colors, most of which are darker/lighter shades of each other.

Not to mention that the weird timing on the display creates
bizarre, unpredictable color artifacts.

And this thing was released how many years after the Atari 800?

>But multi-sized text is the domain of the Atari.
>(though multiple graphics modes have nothing to do with DLIs)

So is gradient shaded text thanks to a 128 color palette and
DLIs.

Antic modes 2, 3, and F.

[snip]

>Artifacted colors should not vary between TV's

Well, since NTSC means Never Twice Same Color the artifact colors
you see depend on where the tint knob is turned. :-)

>This is because the color depends on the phase of the artifacting
>"waveform", and that is a function of the GTIA chip timing. It may vary
>between revisions of GTIA, and between GTIA and CTIA - again I haven't
>seen it so I can't really comment.

AFAIK, the way the 800XL's monitor is set up right now I get blue and
brownish-red. Without changing the monitor settings a CTIA machine
will show a slightly different shade of blue (purpleish?) and green.
If I turn the tint to get green/blue on the GTIA machine, the colors
on CTIA will be blue/brown-red. The timing difference between the
chips is a 1/2 color clock shift.

The "white" color from an even+odd pixel is slightly different than
an odd+even pixel. Clever dithering can make a lot of new "colors".
I did a BASIC program once that experimented with mode F (Gr.8)
dithering... Must be on one of those DS DD floppies and my XF551 is
toast.

> keyboard)

This is why I want to remove BASIC from my 800xl; I _always_ forget to
hold down OPTION and it's getting annoying. I have an 800 as well and I
suppose I don't get used to holding down OPTION because I don't have to
on that - but my 800xl's keyboard does RULE so much over the 800's.....

(note: in fact I have 3 800xl's, all with different keyboards - one
terrible, one good-ish and one GRATE!)

> I started wondering if my modified 1200/pseudo 800XL might think BASIC was

I wonder how the OS handles having F keys and LEDS connected to the
other PORTB lines - or have you disabled them all? :(

Well, when you put an even + odd pixel together you get a slightly
different shade of white than an odd + even pixel. I wrote a
program in BASIC a long time ago (must be on one of these DS DD
floppies and my XF551 is dead) which made all kinds of dither
pattern to simulate quite a lot of interesting color in this 2
color mode.

>5th point.
>
>Artifacting only works in GR.0 or GR.8

>seen it so I can't really comment.

Remember NTSC means Never Twice the Same Color, so the colors you
see are dependent on where the tint knob is turned on your TV.
On my composite monitor the GTIA 800XL makes green and purple-blue.
(We're assuming black background and "white" pixels for this.)
Without changing the TV adjustments, a CTIA machine will produce
reddish-brown and blue (but not the same blue as GTIA's blue
artifact color.) If you play with the tint you can make a GTIA
look like a CTIA and a CTIA look like GTIA. The difference is
due to a half color clock shift in timing between the two chips.

>How so? Move work as documented on my 130XE. Observe the cautions and
>comments and all is well, as far as I can see. I've used it many times.

I used the move command to coarse scroll text windows on a custom
display. It work fine on the 800. On the 800 XL it didn't work
right. It looked like a mode 0 display looks when you set the
screen width to narrow -- the OS works at 40 bytes per line while
ANTIC uses 32. The result is that each line is shifted a few
characters farther right than the one above it. I have no reason
why the XL does this, but it works right on the non XL OS.

Now, the move command does work when I moved character sets and
P/M graphics around. The screen scrolling depends on the
documented behavior of copying overlapping memory locations. I
don't know why that should change between OS versions.

If I ever get a round tuit I'll convert the games I did over
to assembly... the programs were 75% data for P/M graphics,
redefined character sets, new display lists, DLIs, VBIs,
blah blah.

Source record: 68286

I have my busted XF551 in the office for the hardware technicians
to play with and we need to know how the XF551 is supposed to
work.

We have two power supplies and can't figure out which one is
supposed to be the right one. They both say they put out the
right voltage, but the XF551 behaves differently with them.
With the first power supply the XF 551 spins for a while
after being turned on. With the other power supply the motor
basically only bumps a little and the light comes on for half
a second at most.

I know the 810 spins for a while when turned on. But I thought
the XF551 is supposed to be different.

Anyway, the drive doesn't appear to work at all. When it is
connected to the Atari there's just a very low level short
buzzing noises and then a lot of silence. No boot error
messages or anything. Since I bought it a few years ago I
think it has had maybe 80 hours of use. Really impressive
MTBF, but it is tramiel hardware after all.

I don't know about the LEDs, but the F keys were connected to Pokey like the regular keyboard keys, and they are shown on the 800XL keyboard test screen. In fact, I think some people used to wire their own F-keys into 800XLs.

: an OS in the modern sense of the word, i.e. task and memory management.

Well what else would you have?
It seems pretty full featured to me.

Since the Atari doesn't multitask that's all you really need.
And you can allocate memory.It's just that it has to be contigous.
(except that you can allocate a second block of memory from above video
memory)
When you change graphics modes the OS automaticly allocates enough memory
from the (current) top of memory.And resident programmes like device
handlers allocate memory from the bottom.

That's all you really need when there's only one "foreground" programme.
(and UNIX programmes most usually only use one big chunk of memory since
that's how malloc(3) works (it uses brk(2)))

: : I'm not sure what you mean by this but Atari OS doesn't have a
: : "programe-loader" function to it.(except to boot a disk or other device)
: : Neither does DOS.It's all user-level as far as loading programmes go.

: You are fighting over semantics.

Well,no,all it has is a "boot the first few sectors" function that happens
when you turn it on.(or cold-start)
The first few (variable number of) sectors contain the boot programme for
DOS or the game.(the same for tapes)
You could theoreticly put a whole file game in the boot-loader but it would
be a waste of space.

```
Atari 800 with floppy disk drive & power supply.
Original styrofoam case.
Lots of software on floppy disk.
Box of books and manuals on the 800.
Cartridge games: PacMan, Centipede, Star Raiders, Basic, plus
lots more (over 10).
Also an Atari 800XL in original box.

Everything works great. Moving. Must sell.

Make offer for everything to:

eakle@sirius.com, El Cerrito, Calif.

or call: (510) 236-8781, ask for Peter.

(note: buyer must pay shipping charges)
```

DOS does have a "program loader" function. And there is a file
format defined for these directly executable programs too.

: Someone has been working on De Re Atari in installments. I hope this is
: being collected into one large archive file or at least into chapter
: archives. Ian Chadwick was suppose to be converting Mapping the Atari
: into a data form, but that was mentioned over a year ago and I haven't
: heard anything since. There was a big mess as to what format it should
: be presented in. He might have gotten disgusted at all this and dumped
: the project. I certainly hope not.

Here's a idea,how about a TEXT file?!?
Sheesh.I've never understood what the big comotion was about.He can put it
in whatever weird format he wants as long as it's also available in a real
text file.Un-formated,of course.That is,with RETURNs only where blank
lines (or the right side of tables) are.
(I always used to print stuff out in 132-columns.I used a Atari text
re-formatter programme.But it always messed up a table or ten)
It seems pretty obvious to me.Why people want to make something so simple
so complex is beyond me.
: Ian, if you are still listening, could you provide an update?

I'm sure that he's simply busy getting it done.Obviously people are going
to speak up when people talk about puting it up in a format ususable to
the intended target.He understands that.And even if he didn't I doubt that
he would give up just because of that.

: Another book I'd like to see in e-format is Lon Pooles Your Atari
: Computer. Also the SpartaDOS manuals, Action! manual, MAC/65 manual
: BASIC XL and BASIC XE manuals converted to searchable data.
: The MI/O and HAPPY v7.0 manuals are already available.

"e-format"?

How about the Black Box manuals.They're pretty slim.

There's nothing like this on the Atari except for Lode Runner.
(and a older version of Flight Simulator)
You can get Lode Runner from ftp.hackerz.com.
(but you need something that can handle spaces in directory names)

And CGA has nothing to do with the PC/XT.The video card is seperate.You could
have VGA on your PC-2.

You must not have flow control on that modem.Remember that if the BBS is using
a buffered modem (one with error corection) that BBS-side flow control won't
work.Kermit WILL keep up if your modem or the BBS support flow control.
Of course for your 2400 you should use Ice-T.But for 9600
(I could never get 19200 to work on my P:R:Connection)
Kermit can keep up with my 14400bps modem.Ice-T has problems at high speeds.
But Kermit can download so it's good if you need to download many small files.
(otherwise you'll have to exit and run BobTerm or A-Tar-Zee modem each time)

>>Both Ice-T and Kermit-65 use the normal DEC (ANSI?) character set.
>>(unlike PC BBSes)
>Not true! Ice-T fully supports the PC character set (as well as the
>ANSI one), and I've used it quite often to successfully access
>modern PC-based BBSes.
>(I should know, I wrote the damn software.)

You must be talking about the 130XE version of Ice-T.
All other Atari systems must use the 48k version so that's what I talk about.
You should add the ability to load other character sets to your old version of
Ice-T.Great term programme.But XON/XOFF flow control would've been nice.
Nice use of the atari's special capabilities!

>
> Ryan Amos Lifetime Student McMaster University

I have a CX-85 Numerical Keypad available for trade, boxed with User's Guide. It comes with the following:

CX85 Numerical Keypad
CX8131 Data Entry Diskette
CX8132 Data Base Diskette
CX8133 Reporting Diskette
CX8134 Simple Data Base Diskette (Benson)
User's Guide - spiral bound, 140 pages

To answer your question, it is to be used with (as per the box) such programs as:
- Stock Charting
- The Home Filing Manager
- Stock Analysis
- Mortgage & Loan Analysis
- Bond Analysis
- Telelink I
- Graph It
- Mailing List
- Statistics I

Requires:
- Atari 800 Computer with 48K RAM
- Atari 810 Disk Drive

I would offer mine in trade for Atari 8-bit carts, or Vectrex games, possibly other video gaming stuffs. If no offers come in, I will have it on eBay in a week or so to the high cash bidder. Hope this info helped to answer your question.

Flicker term 80 does software. I have an Omnimon chip in my 256K
XE that has an 80 column mode and fairly good word processor it
came with but I haven't used it in years. I've seen flicker term
in lots of Atari archive sites.

3759. Reinhard's Rarities Auction 11-27-97

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-27 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <65jtpggmb1@mark.ucdavis.edu>
Source record: 68302
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

Happy Thanksgiving Everyone,

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

Thanks, Reinhard

Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

Happy Thanksgiving Everyone,

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

www.pribish.com/auction.txt

Thanks, Reinhard

Hello. There are many solutions:

SOFTWARE SOLUTIONS

Atari's "Translator Disks"
An binary file called ______ (forgot, but it's the BEST!)

HARDWARE SOLUTIONS

Get one of those switching OS ROM upgrades
Actually get an Atari 800

Cheers,

Jon

3766. ANNC: SIFE 0.0 IS HERE

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-27 00:00:00 UTC
From: kendrick@zippy.sonoma.edu
Message-ID: <65jgmmddm1@nuke.csu.net>
Source record: 68377

SIFE, The Super-IRG Font Editor, version 0.0 has been released!

Super-IRG mode is similar to APAC, ColorView and HIP mode in that it
is a software-based, Vertical Blank Interrupt (VBI) driven display.

With Super-IRG mode, you get 14 colors on screen at once, nearly
3 times as many as in a normal IRG mode. And since the palette doesn't
change and DLI's aren't used, you can dither the "blended" colors
between the two flipped frames to reduce the flickering considerably!

In fact, SIFE does just this! When I was creating the graphics for
Gem Drop (I did this practically by hand; I only had a simple
monochrome font editor to use!), I learned that the key to making the
Super-IRG mode look good is to take advantage of the ability to dither
the pixels.

SIFE has a simple copy/paste buffer for copying characters around in
your font, and even allows you to edit four characters at a time
(in a 2x2 fashion; great for tile graphics for games)...

The current version comes with:

* The SIFE 0.0 compiled executable (no Action! cartridge is needed).
* The Action! source code to SIFE 0.0.
* A Super-IRG library for Action! INCLUDE it in your programs and then
use SIOn() and SIOff() to turn the mode on and off.
* A simple example program using the library mentioned above.
* A Super-IRG version of the good ol' standard Atari ROM font.
* Documentation!

This isn't the last version, though! Future versions will include:

* Editing of at least two fonts simultaneously (with copy/paste between).
This would be great for animated fonts!
* Assembly language and BASIC examples of using Super-IRG.
* More editing features (mirror image, invert, slide, etc.)
* The ability to load and save other font formats.
* A Windows BMP to SIFE converted!?!?

You can download SIFE from U.Mich at:

ftp://atari.archive.umich.edu/atari/8bit/Graphics/Editors/
http://www.umich.edu/~archive/atari/8bit/Graphics/Editors/

Or search for it at XL Search:

http://zippy.sonoma.edu/kendrick/nbs/xlsearch/

Or just download it directly off the SIFE Website:

http://zippy.sonoma.edu/kendrick/nbs/atari/utils/sife/

Enjoy! Please send any comments!

And if you make some cool, useful .SIF fonts, please e-mail them to me
or upload them to UMich!

I have the following items for sale.

All items have been tested for proper function and will be retested prior to shipment. Unless noted otherwise, items do not include original packaging and manuals.
Offers will be considered on pre-priced items. Buyer pays shipping.

Please make all inquires via e-mail to: GWestndrf@aol.com

Atari 800 computer - 48K RAM - power supply - RF cable - (no RF box) - $20

Atari 1200XL computer - 64K RAM - pwr supply - RF cable & box - $20

Atari 1050 disk drive - pwr supply - I/O cable - $25

Atari 1020 color printer - everything including the box - make offer
bonus - Print Shop driver & sketchpad software on disk, extra paper

Atari 1020 color printer - color pens - no p/s, cable, manual - make offer
bonus - PS driver, software on disk, extra paper, original box

Atari keypad and bookkeeper software - make offer

Atari paddle controllers - make offer

Okimate 10 color printer - cable, thermal paper, ribbons - $20

Supra MicroPrint printer interface - $15

2 - Epyx 500XJ joystick - $5

Wico trackball - $5

Koala pad touch tablet - manual & software - $25

Radio Shack DMP-110 printer - missing one cover - make offer

Updated message will be posted next week.

As noted above, please send all inquires via e-mail to GWestndrf@aol.com

3768. 80 Columns Possible?

Newsgroup: comp.sys.atari.8bit

Is there a way to get an 80 column display from a 130XE? Our local freenet offers Lynx connection to the Internet but the computers must be able to attain 80 column display.

Thanks...

3769. Heinous 8bit Stuff I Bought

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-27 00:00:00 UTC
From: knave@usa.net
Message-ID: <880653691.21887@dejanews.com>
Source record: 68380

Not being one to pass up a chance to buy a load of ancient junk, I jumped at an offer to purchase an Atari 800, 1050, 825, 850, 410 and a bit miscellaneous software, for $50. Okay deal?

Well, the 410's busted, but everything else is okay. He even threw in an Atari trak-ball (1985?) complete in box with the tape across the ball to hold it in place. I tested the computer and disk-drive and they work.

The Atari 825 80 column printer? What a gruesome beast! The printer head device looks (and sounds!) like a miniature Gatling gun. It's pretty damn scary when it's trying to print!

BANGBANGBANG-B-B-BANG-CHIK-BANG-BANG-ZERRRRRRK-B-B-B-BANG-YINNNNNNNG-BANG-ZERRRRRK!

Unfortunately there's no ink or ribbons or anything. He sent me some ribbons that are unused but I think they are dried up and I can't figure out how to put them on. They come in small boxes. I like this printer though, it must weigh about 200 lbs, can anyone offer any tips and do they still make ribbons for it?

Which brings me to the 850 RS-232 and what-the-hell-else interface. It's a beige box with about 39 (no really about 7) ports in it. Can I run a multi-line BBS with this baby? How 'bout a web-server?

Dave

The mortal A. Karl Heller wrote:

: So, would a 1200XL with a 800XL OS be more or less compatible with
: or without the BASIC Rom chip installed?

Yes, it's great.

The 1200XL has the best keyboard and plenty of room for memory expansion,
but it has the OS problem and crappy video, so it really needs lots of
hacks to bring it up to spec, but when you do, wow!

3771. NEW Atari Stock being added! More inventory!

If you wan't me to read any response from you, do not respond here, Direct all responses in E-Mail to: bensmith@teleport.com

Hello, recently my postings had the subject: FREE Atari Catalogs by E-Mail, FTP & the Web! New Lower Prices! This still and always holds true! I've changed the Subject because I've recently received more Atari stock. Both Classic 8 Bit & Atari ST. HardWare, SoftWare, Books & Accessories. Due to this development, I'll be trying to spend less time on the InterNet and more time organizing, testing, cataloging & pricing the new Atari stock. Besides that I suffer from depression which seems to worsen this time of year because it gets dark earlier. It would cheer me up if we got some snow. Also, I need to see my Doctor, when I can get an appointment with him, about pain in my Right Shoulder and limited mobility which is not good because I am Right handed. So I ask that you keep me in your prayers. And be patient with me if I am slow in getting back to you.

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or keep track of your Mailing/Shipping address. To expedite your order, include your Mailing/Shipping address and it wouldn't hurt to include your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff that needs work you can have some ***FREE*** Atari stuff for the cost of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some thing you've been looking for, Something you might want & something New to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml. And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can't attach files to your E-Mail. I will get back to you after the weekend. Please Direct all Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien vs Predator and even complete Jaguar Systems. If you have what I'm looking for, check my Atari Catalogs for stuff to trade at: http://www.teleport.com/~bensmith/bscomputers.shtml or E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the Monitor Power Directors to Manage & Protect your Equipment. Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File

called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

>

You should use a standard Atari 810/1050 power supply. Atari part #
C017945. Here are the specs:

Input: 120VAC, 60Hz, 50W
Output: 9VAC, 31VA

If your power supply is dead, then the fuse inside is probably blown.
I've found that you could crack the case open (carefully) and replace the
fuse. To crack open the case, put it on a hard surface (I find a concrete
sidewalk works good) and use a hammer to break the seal around the
base of the power supply. This will help get the lid off to get inside.
Then
when done replacing the fuse, you could elmer or super glue the lid back
on.

> I know the 810 spins for a while when turned on. But I thought
> the XF551 is supposed to be different.
>

Basicly, the XF551 when turned on will cycle the head from the park
position to track 0 and then back to park. Takes less that 2 seconds
to complete.

> Anyway, the drive doesn't appear to work at all. When it is
> connected to the Atari there's just a very low level short

Best Electronics has the following stuff to help you fix it:

Schematics (CB102052) - $15.00
Power Supply (C017945/CA017964) - $15.00
XF551 MPU (CB101393) - $15.00
XF551 OS (C101696) - $15.00
Western Digital Floppy Disk Controller (1772)
(C026028) - $18.00
8.3333 MHz Oscillator (CB101219) - $10.00
New motherboard (CB101721) - $99.00
Disk Drive, Generic (CB102339) - $50.00
Disk Drive, Original (CB101722) - $75.00

I got all this information from their catalog. Their phone # is:
(408) 243-6950. Call between 1pm and 5pm on weekdays.

3775. about 6502 programing, are you good ?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-28 00:00:00 UTC
From: Mike <REMOVE_THAT.mpointie@hol.fr>
Message-ID: <#vmLfw5#8GA.238@upnetnews03>
Source record: 68305

Hello guys.
I'm not owner of an Atari 8bit computer, but a long time ago, I was programing with a friend of mine in 6502, because at this time I own an Oric Atmos, with the same processor.

Ok, that's not the subject of this message.

I've recently started a web page dedicated to the programation on the Oric Atmos, but I didn't practice 6502 since 1985... And I've only started to code again this year. My memory is not as good as before, so I wonder if anybody hear could check on my page if I don't write terrible mistakes... As I try to explain how to code in 6502, I try to be simple and efficient. I don't want that people trying to learn 6502 be confused by my explanations.

If you're good in 6502 (or have knowledges), please go on my page, click on the ORIC button in the left of the screen, choose "HOW TO CODE", and check what I write about assembly.

By the way, what is the best 6502 cross assembler on PC ? I'm using FRASM, but it seems to be very buggy, and it's not possible to use macros.

Thanks to read, and see ya another day perhaps

If you want to contact me, remove the header on my adress please, it's against MAIL BOMBING (or SPAM).

8 bits are cool...
:)

Mike.

This is an interesting question. Does anyone know if there
is a cross-assembler (or just a plain syntax/assembly
simulator) that will work with Mac/65 .directives and
macros?

The last time I searched the list of 30,000-some newsgroups,
this was the only real, English-language, Atari 8-bit group.
I don't mind the for-sale postings; it's easy enough to
pass by them. And in my opinion it's better to keep all the
8-bitters together in this newsgroup than to try to split up
what little interest there is these days into multiple news-
groups.

Hello,

Can someone tell me about an old Atari game called 'Kult' ?
I could find the solution of the game on a FTP site (file name : Kult.sol),

but nobody knows about this game. I have it on two 3.5 floppy disks which
seems to be
crashed since the utility program I used to create an ST file, returned me
a lot
of bad sectors.
Thanks to send any new to : micky@mail.dotcom.fr

Well there is a Kult on the Atari 8-bit, and it's a monochrome horizontal scroller shoot-em-up, similar to Zybex but with less colours. However I get the feeling you're asking about another game of the same name either on the ST (two 3.5 floppys! - the game I'm thinking about fits in less than 90K), or on an 8-bit emulator. If it is on the ST, then you're in the wrong newsgroup.

Source record: 68319

Love the M.U.L.E. game. Still keep an Atari going just to play the game. From the posts, it sounds like there is software to make a PC emulate a Commodore and a Commodore version of M.U.L.E. available. If this is correct, would someone take the time to explain how I do this. If somebody sells this on disk or CDrom, I would be interested in purchasing. Would like to be able to play M.U.L.E on the PC before my Atari disk or drive wears out. Thanks for any help you can give.

>

I don't know about manufacturing, but you can still purchase some. Best
Electronics @ (408) 243-6950. Ask for Atari part # CB101737 (price $6.00).

Couple of tips from their catalog:

Tip #1: NEVER apply any upward force on the 825 head lever when moving
the head lever forward or backward. The lever will snap every time you do
this
movement.

Tip #2: On any "Nylon Type" (not multistrike) printer ribbons (spool to
spool
(1025), small cartridge 1029, and so on), when not using your printer for
any

length of time or any extra or net printer ribbons (like the 825 zip pack) you
have, remove the printer ribbon from your printer, put them in a zip lock plastic bag and store them in your freezer section of your refrigerator. This
will prevent the ink on the Nylon ribbons from drying out and extend the useable life of your printer ribbons many fold.

I highly encourage getting their catalog, it's $7.50. It's packed full of just about
everything Atari and has all kinds of other good products and information (ie:
the Savmor Universal Re-Inking Machine, page 148).

> Which brings me to the 850 RS-232 and what-the-hell-else interface. It's
> a beige box with about 39 (no really about 7) ports in it. Can I run a
> multi-line BBS with this baby? How 'bout a web-server?
>

There should be a total of 8 connectors. Two Serial I/O (SIO) port connectors,
power, printer port, and four RS232 ports. RS232 Port 1 is a full functional port,
and the remaining ones are slight variations of port 1.

Port 1 has the following signals:
Transmit (XMT), Data Terminal Ready (DTR), Request To Send (RTS),
Receive (RCV), Data Set Ready (DSR), Clear To Send (CTS), Carrier Detect (CRX),
and Signal Ground.

Port 2 & 3 have the following signals:
XMT, DTR, RCV, DSR, GND

Port 4 has the following signals:
XMT, RCV

If you could do a multiline BBS, I wouldn't know. Looking at the above signals,
I don't think so.

Enjoy your Atari.

You could also go the route of a XEP 80 (as long as your doing just text,
and some Atari
graphics characters) with IBM high-res TTL monochrome monitor. Best
Electronics has
a instruction sheet to modify a XEP 80 to work with a TTL monitor. Give
them a call @
(408) 243-6950 Mon-Fri 1pm-5pm. This would probably give you the best 80
column
possible on the Atari.

You need to take a good look at Puff's Mux for the Atari 8-bit..

You can connect up to 7 computers and disk/hard drive set up to one Master computer and Hard drive setup..transfer data in and out to and from any of the 7 in the chain. The standard unit comes with Master, and 2 slaves, extra slaves can be purchased seperatly up to 7. You can run Pro 5.0b on the Mux without any modifications, software is built in to handle the hardware. Muxtime software in 5.0b will take the R-Time 8 cartridge from the master and keep accurate time on up to 7 different computers on the Mux cable..

But nice to see someone else accomplishing hardware feats for our computers.

for the most part, you can connect two computers to the same SIO device using just a diode (or nothing, if you're using 1200XLs). I did this for the local schools when they were using Atari 8-bits, plugging the end of the SIO string from two systems into the same printer..... works pretty good!

Cross-posted to: rec.games.video.classic,alt.games.video.classic,comp.sys.apple2.marketplace,comp.sys.atari.8bit,comp.sys.cbm,comp.sys.ti,houston.forsale

OPEN AUCTION ENDS ON WEDNESDAY DECEMBER 3, 1997 --
5 DAYS FROM NOW!!!

1. The open auction ends on December 3, 1997. At this point,
the auction will be restricted to previous bidders and bids
will win an item if not raised within 24 hours.

2. Bids are binding.

3. Payment is via check or money order. Payment must be received
before items will be shipped. Of course, references are available
on request.

4. Shipping is through USPS according to the type of packaging
and class of delivery you choose, and the weight of your items.

5. All carts are loose unless otherwise noted.

6. Minimum raise is $0.50 for items under $4, and $1 for all others.

ITEM PRICE BIDDER
SINGLE ITEMS

Atari 2600
Squeeze Box (US Games/excellent condition) $5 minimum
Raft Rider (US Games/excellent condition) $5 minimum
Trackball -- works fine $2.50 minimum
Keyboard Controllers CX-50 (includes beat-up box) $1 minimum

Apple II
Temple of Apshai Trilogy (disk) Full/untested $1 minimum

TI 99/4A
Disk Dup (this one has a label marked Sneggit but $7.50 EICHER
crossed out and the words Disk Dup written
next to the label. There is also a sticker
on the bottom on which is written "Chip 3"
by hand. The cart is also noticably
heavier than any of the others. I suspect
it's either a proto or more likely an EPROM
copy -- let me know if you know what this is)

Socates Educational Video System
Hodge-Podge (includes cart, box, docs -- box $2 minimum

is a little beat up though)

Commodore 64
Super Smash P/N C64622 $3 minimum
Cart only; label is typed, case is standard Commodore.

BULK ITEMS
Atari 400/800/1200 pack (3 carts) $3 James
Atari 2600 pack (40 carts) $29 minimum
Atari 7800 pack (6 carts, most shrinkwrapped) $5 minimum
C-64 Educational pack (8 carts, most with box/docs) $10 minimum
C-64 Other pack (4 carts) $5 minimum
TI-99/4A pack (4 carts) $4 minimum

Atari 400/800/1200
Untested; look to be in good condition

Atari -- Missile Command
Telelink I
Microbits Peripheral Products -- Smart Terminal

Atari 2600
Tested and working.

Activision:
Barnstorming (actiplague)
Dragster (Actiplague, a bubble on end label)
Fishing Derby (price written in red grease pencil)
Freeway (some actiplague)
Grand Prix (actiplague, small tear)
Pitfall (no label, chipped)
Skiing (some actiplague)
Stampede (small amt of actiplague)

Apollo:
Lost Luggage (end label is a little loose)

Atari:
Battlezone (small tear, price tag affixed)
Breakout (labels are great -- no pic)
Crystal Castles (small tear from price tag removal)
Donkey Kong (red label in good condition)
Football (boxed and sealed)
Jr. Pac Man (sticky price tag affixed)
Mario Bros (Price tag)
Pac-Man (wear)
Pele's Soccer (no end label)
Space War (pic label, some discoloration, spots)
Star Raiders (small wear)
Surround (no pic, grease pencil marks barely visible)

Sears:
Breakaway IV (tiny hole)

Gunslinger
Speedway II
Target Fun (red text, part of tag affixed)
Target Fun (yellow text)

CBS:
Gorf (screw holes, wear)
Gorf (some wear on end label)
Wizard of Wor (small wear on end label)

Coleco:
Mouse Trap (two-thirds of label torn off)
Smurf Rescue in Gargamel's Castle (price tag/wear)
Smurf Rescue in Gargamel's Castle (bubbling/wear)

Epyx:
California Games (price written in red grease pencil)

Imagic:
Fire Fighter
Riddle of the Sphinx (some wear, small screw hole)

M-Network
Kool Aid Man (some label fading)
Lock 'n' Chase

Parker Brothers:
Frogger (no label)
Strawberry Shortcake (rattles; label has actiplague)
Tutankham (some label peel)

Atari 7800
Tested; everything works fine.

One on One (boxed -- shrinkwrapped)
Xevious (beginning to form holes near top of label)
Galaga (small rip on "al" in Galaga on main label)
Mat Mania Challenge (boxed -- shrinkwrapped)
Ms. Pac Man (some label wear but no real damage)
Choplifter (some label wear)

C-64 Educational
Untested

Sesame Street: Ernie's Magic Shapes
Includes box (some wrinkling of plastic),
Game Play and Activity Manual, and
cartridge (good condition).

Sesame Street: Letter Go Round
Includes box (some wrinkling of plastic),
Game Play and Activity Manual,
How to Play summary card,
plastic keyboard overlay, and

cartridge (good condition).

Sesame Street: Big Bird's Special Delivery
Includes cartridge only (near-mint condition).

Fisher Price Number Tumblers
Includes box (squished), manual,
Registration Card, and cart (OK condition).

CBS Software Ducks Ahoy!
Includes box (some wrinkling of plastic),
Game Play Manual, Ducks Ahoy! Book of
Silly Duck Stuff, cartridge (good condition)

Spinnaker ALF in the Color Caves
Includes box, manual, cartridge (OK condition)

Spinnaker Story Machine
Includes box and cartridge (OK condition)

Spinnaker Kinder Comp
Includes box, manual, cartridge (OK condition)

C-64 Other
Untested

UNKNOWN from Hesware
Something without a label. Cart Only.

Pitfall II
Shrinkwrapped.

Partner 64
Cart Only; button and foot in good condition.

IDSI's Rack 'em Up! by Roklan Corp.
Cart only; label doesn't appear damaged, but
doesn't really fit the cart well either. Red
dot (sticker) affixed. Vibrant yellow cart.

TI 99/4A
Untested.

Reading Fun 2A
Alligator Mix
Sneggit (handwr. label)
Number Bowling

Fair comments. What I'm trying to say is that none of the Atari 8 bit emus come close to being as great as the real thing although they are all great accomplishments in themselves. I'm a bit frustrated that I can't lay my hands on an 8 bit emu that does it all. I wouldn't expect it for free, although it would be nice! That was the original idea behind XFormer (?) but it seems to have died a little.

Gareth Davies.

That was the original idea behind XFormer (?) but it seems to have died a little.

Gareth Davies.

I think I see what you are trying to say; however, some of the examples you have given are FREE. The C64 emu, as I understand it, suffers from the same restraints as the Atari 8bit emus. MAME is FREE and is GREAT!! But that's because brilliant people have been working on it! Also, I understand most of the MSX stuff is free as well, but since I don't know anything about it,

I'll not say anything. :o)

I have said this before and am glad to see someone else make the same comment. It's pathetic that the free emu's are so much better than the commercial ones.

Point is, your comment about extra effort in regards to commercial emus simply doesn't hold water. The best ones are still free and it is simple greed to ask money for a crippled product!!!

If anyone wants to know what a great commercial emu is, check out Executor(an emu that emulates Macs on a PC). This is a great piece of software that reall pisses off my Mac fiends!!!

Tony, on an IRC channel (davis.dal.net #atari8) I spoke to the Sysop of the Closer to Home BBS/Web Site. A long time ago, he wrote a program called, I think, Term80 which was a standard sort of term program BUT used his special 4x8 character set to achieve a non-flickering 80 column display on a standard 8bit Atari.

I have not yet witnessed this program (am dying to, because I had the same idea) but I have heard people here on CSA.8bit refer to it.

Maybe someone who knows can critique this program, and how he did w's and m's?

Dave

Yeah, I think so too. It even came with 7 Cities of Gold, Age of
Adventure, basic cart, missile command cart, and donkey kong cart.

> You can always find another 410 (or even a 1010) in a thrift shop.

When I had my first Atari 800, more than a decade ago, the 410 never
worked very well. I think I'd rather try to hack a cable for an old
cassette deck.

I am strictly a layman, not a good programmer (wrote some horrendous but ambitious incomplete games with basic variants on Atari and Amiga) so I don't understand why I can't use these modem-looking ports on the 850 to run a multiline classic BBS.

Again, thank you for the info, though much of it is Greek to me.

3817. Info on ATR-8000

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-29 00:00:00 UTC
From: semslie@aol.com
Message-ID: <19971129191600.OAA25607@ladder02.news.aol.com>
Source record: 68251

I have two questions on the ATR-8000.

How does it hook up to the Atari? SIO? PBI? ECI?

What are the features it has? Disks? Ports?

Any help email: semslie@aol.com

3818. Atari Touch Tablet and the pen with the button

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-29 00:00:00 UTC
From: kenneth@spam.not.sayeth.i
Message-ID: <348079fa.8417303@news.aatech.com>
Source record: 68252

I'm pulling all my Atari stuff out of boxes and I came
across my touch tablet. I also came across a brochure
for the XL stuff that includes a picture of the tablet
with a stylus that had a cable that connected to the
touch tablet. Sure enough, but I turned it over and
there is a tiny jack like a mini-headphone jack on it.
I've never actually seen a tablet with one of these
styli(?). Everyone I've seen including mine has this
ugly white plastic stylus with an orange ball on one end
that looks totally out of place with the Atari touch
tablet packaging and and always gets lost for weeks at
a time. Then I came across a programming book for the
Atari that describes the Koala and Atari touch tablet
and reports that the Atari stylus also had its own
switch on it that was a separate input value from
both buttons on the tablet.

Hmmm. I'm starting to feel ripped off. I bought this
thing (along with my now broken XF551) directly from
Atari when they were dumping their warehouses of 8-bit
stuff.

Does anyone have a plug-in stylus? Does anyone have
an idea how to make one? (Doesn't seem too hard, just
a switch wired correctly into the right kind of jack.)
Does anyone know why Atari stopped supplying the real
pens with the button on them? (People's kids strangling
each other with the cords?)

Maybe you could do something like Slipnot that runs on a
unix(shell) account and uses Xmodem, well Xmodem or Ymodem in
this case. Didn't someone say the eight bit would work up to
19200 with a 14400 modem & 850?

I have a 130XE that I use for downloading (through Delphi). For graphic surfing I use Web TV which is inexpensive and does everything a PC with windows can do, except for downloading.
It would really be cool if I could tie the 2 together - graphic surfing and downloading at the same time.
The Web TV box plugs directly into the TV as does my XE. Anyone think it might be possible to develop a common interface?

Has anyone given serious thought to creating an archive of 8bit informational articles? What I mean by this is that I have hundreds of text files from Compu-Serve, programmers, hardware hackers, etc... that I have collected over the years. It would be nice to be to "click" on, say, XF551 and find a large pool of technical articles written on it.

This all came about because I'm pooring through files trying to find information on MIO ram chips. I recall something funky about them from a CIS chat group way back when. While doing this I found a few tech files on the XF551 and how to hook it up as a parallel device. Up until this time I thought the only parallel hack was for the 1050. See what one learns from spending the day with old 5 1/4 floppies? =)

Not really a trick. Most color text display generation
is done similarly. One block of memory gives a byte for
each character location identifying that character.
Another block of memory gives one byte for each character
location describing the foreground and background color
used for each character location.

The lame part is the 16 hardwired colors in the C64.

re: "cool fight game"...

A Virtua/Tekken/Toshinden sort of game would be the holy grail
in this instance. I wonder what the Poles have done lately i
in the way of 3D engines? I know they were working on a Doom
like game for the 8-bits. Maybe an easier thing to do would be
to work on some sort of voxel engine. I don't really care if
it can only be done in graphics 3, it would be neat if it could
be done!

Something going along with that, we know that one can shut off
the ANTIC to gain about 30% calulation speed. Can one shut off
the CPU and give all the time to ANTIC? Some really amazing
things could be done if ANTIC had all the time it wanted...

From: he110@cleveland.Freenet.Edu
Message-ID: <65sp1j$bn6@alexander.INS.CWRU.Edu>
Source record: 68146

You need a 130XE, a RAMdisk _OR_ a Hard drive (Also an MIO, Black Box, or P:R: Connection), a fairly speedy Modem (9600+),and a copy of Ice-T 2.72. You can get ICe-T from the Closer To Home FTP site. (ran by Tom Hunt).

You also need an Internet Service Provider that will let you use a shell account. (If you dial the number, enter your username and password, and then are at a prompt, then you are good to go).

Once all this is set up, you need to telnet to a Lynx server. Lynx is a text-based world wide web browser. At the prompt, type this:

129.237.33.3

and then press return. This will take you to the University of Kansas Lynx site. Follow the directions from there.
A good book that would help would be 'The World Wide Web Unleashed' by Sams Publishing. I have the 1994 edition.
You should be able to find it from a B.Dalton or WaldenBooks bookstore. If not, the ISBN# is:0-672-30617-4.
There is a nice introduction to Lynx on pages 138 to 146.

Any other questions please email me...

The Atari Touch Tablet wasn't a game but a device for drawing pictures on your TV or monitor screen. It came with cartridge software called Atari Artist (RX8053). Games for the touch tablet should be possible though. Analog magazine published a music program for it called Musorqa in the Sep '85 issue (#34).

: can any body tell me what i need to surf the the web with my 130xe

You won't be able to see graphics but it's possible to read the text content of web pages on Atari 8-bit computers. You'll need a text (sometimes called shell) account with an internet provider. The provider must offer the use of a browser on their system called Lynx. For your Atari you'll need hardware to connect it to a phone line (modem, interface, etc.). You'll also need terminal software. To access text on the internet requires VT-100 terminal compatability (80 column screen and special control character sequences). I know of three terminal programs for Atari 8-bits that implement VT-100 compatability in software. The first is an old program called VT Ten Squared. It will run at at 300 or 1200 bps. A newer program is Ice-T. It does XMODEM downloads. I use FlickerTerm 80 (I'm writing this message with it on a stock 800). Hope you'll be able to find a provider and the hardware and software to run your 130XE on the web.

My Touch Tablet was sold as "reconditioned" and came with an orange topped stylus. Later I bought a replacement Atari stylus from Best Electronics (408-243-6950). They still list them in their new catalog for $9.00. It would be easy to add a switch. The switch on the stylus is momentary normally open. When the button is pressed, the pins on the 2-conductor mini-plug are shorted together.

:
:I'm pulling all my Atari stuff out of boxes and I came
:across my touch tablet. I also came across a brochure
:for the XL stuff that includes a picture of the tablet
:with a stylus that had a cable that connected to the
:touch tablet. Sure enough, but I turned it over and
:there is a tiny jack like a mini-headphone jack on it.
:I've never actually seen a tablet with one of these
:styli(?). Everyone I've seen including mine has this
:ugly white plastic stylus with an orange ball on one end
:that looks totally out of place with the Atari touch
:tablet packaging and and always gets lost for weeks at
:a time. Then I came across a programming book for the
:Atari that describes the Koala and Atari touch tablet
:and reports that the Atari stylus also had its own
:switch on it that was a separate input value from
:both buttons on the tablet.
:
:Hmmm. I'm starting to feel ripped off. I bought this
:thing (along with my now broken XF551) directly from
:Atari when they were dumping their warehouses of 8-bit
:stuff.
:
:Does anyone have a plug-in stylus? Does anyone have
:an idea how to make one? (Doesn't seem too hard, just

:a switch wired correctly into the right kind of jack.)
:Does anyone know why Atari stopped supplying the real
:pens with the button on them? (People's kids strangling
:each other with the cords?)

Hey Vidar! I'm the one who wants to write a graphical browser for the Atari.

My problem is I don't have a modem interface!

And NO - I'm not planning PPP/Slip support at this point! Sorry! <:^(

Ok, so then, you are putting this on the net saying that the only people
who can bid on it are previous bidders?

3850. SIFE - Any comments?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-30 00:00:00 UTC
From: kendrick@zippy.sonoma.edu
Message-ID: <65qm64$35e$2@nuke.csu.net>
Source record: 68263

Has anyone downloaded SIFE (Super-IRG Font Editor, in Graphics/Editors at U.Mich*), the new graphics editor I just released?

If so, please tell me what you think of it... comments, questions and, especially, suggestions! :)

Thanks!

* - Remember, you can search through much of U.Much (and one day, other FTP sites) using "XL Search", the web- and e-mail-based FTP site search engine! It's the "shareware.com" of the Atari 8-bit world!

3851. Re: Internet Software for 8-bit?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-30 00:00:00 UTC
From: euskara@aol.com
Message-ID: <19971130033901.WAA17682@ladder01.news.aol.com>
Source record: 68264

Although I now use America Outta Lines to surf the net, I have to say that Ice-T works very well with the local freenet. Whatever kind of connection they use, Ice-T is lighting fast!!! Never had any problems on line. More than what I can say for AOL (grrr...)

3852. Is possible to filter someone from usenet?

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-30 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <65r04d$1of@alexander.INS.CWRU.Edu>
Source record: 68265

Sorry, but this group is where I know people to listen to.
My problem is, I 'f'ollowup to posts in this group and my
followup disappears, at least partly.

I have very little understanding of usenet and internet.
I've posted about four followups that I've never seen return
to CFN from whereever they go and come back from. I know
that the posts go out, and that some places/people can see
the posts, because I get e-mail responses to posts I never
see in the group.

I posed this question to my sysadmin:
Q: Is it possible to 'filter' someone from usenet?

I got back:
A: No, not generally.

I suppose it can be done, because I doubt this ISP (CFN) is
losing the three or four posts that never showed up back at
CFN. I know there are some pretty knowlegable internet
people here. If you have any suggestions, like could I trace
a post here and find out where/if it is getting 'l'ost.

Thanks.

3853. Re: Info on ATR-8000

Newsgroup: comp.sys.atari.8bit

>What are the features it has? Disks? Ports?
>
>Any help email: semslie@aol.com

It hooks up to the Atari with an SIO cable. The original ATR8000 used a Z80 parallel port to handle the SIO pins, so it was a reasonable floppy controller, but it reallly was overworked if you added the HD controller to it (a collection of PALs on a CPU piggyback card).

The basic setup handled 4 floppy drives (at one time I had 3 8" single sided drives and one double sided 80 track 5 1/4" drive on mine). With the upgrade you could add a SCSI hard drive.

It also supported one serial and one parallel port (simulating an 850).

There was also a program you could run on your 800 to turn the Atari into a CRT terminal for the Z80 and run a more or less standard CPM on the ATR8000 (in this configuration it was either a 16K or a 64K, 4 MHz Z80 box).

I believe there were versions of the terminal program that ran in 40, 64 and 80 column modes (the one I wrote was the standard screen version, it ran in 40 col. mode).

One family of versions of MYDOS was written to support the RS232 functionality of the ATR8000 and I should still have the source code (and maybe a copy of the binary?) lying around should you be interested.

I think the parallel port support was built in, with a pretty decent print spooler (4K in the 16K version and 48K in the 64K version, I think).

3855. Reinhard's Rarities Auction 11-29-97

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-30 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <65ra6kmra1@mark.ucdavis.edu>
Source record: 68268
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

www.pribish.com/auction.txt

Thanks, Reinhard

* *
Note: I had a good day at the fleas today :) - I've added a bunch of
Turbografx Hu-Cards, a few 2600 and 5200 carts, a Galaxian
Tabletop from Coleco and other random items!

3856. Re: The PC Emulators

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-30 00:00:00 UTC
From: Sean Lester <rslester@hotmail.com>
Message-ID: <65qrvkivc1@solaris.cc.vt.edu>
Source record: 68269

The Morbid Guy wrote in message <347e7d49.7293436@nntp.best.com>...
>Or Williams Arcade Classics and Midway Collection 2 for the PC. ;-)

Forgot about them.....and I have Williams on my computer. VERY GOOD and worth the $25.

MAME has started to emulate the Williams stuff though, but it still has a way to go...no sound support. To reiterate, I could care less about MAME's shortcomings since Williams was so good and so cheap.

3857. Don't forget the DGS Web site

Of course not. Everyone is welcome to bid -- it's just that open
bidding will end on Dec 3rd (post was made on 29 Nov).
Sorry 'bout any confusion.
Jeff

Yes, I noticed that, although it should be about time for the
Autumn/Winter edition by now, but it may just be late. Also, they
weren't at AMS '97 at the beginning of this month, and with it being
"just down the road" from them, either they don't have much left to
sell or they are having some other difficulties. Either way it
doesn't look too good.

I didn't think that opening the serial port, receiving
and transmitting bytes across it, opening a file, and
```

dumping those bytes into it would be so constraining...
Yes, for someone who knows how to do it... i would say
'just' write it... i don't know how to do it myself...
but i do have all the info i need... but i already have
a method for doing these xfers, and it works fine...

3861. 8-Bit Auction - Track and Field Controller/Disks/Games/Koala Pad

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-30 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971130150800.KAA28173@ladder01.news.aol.com>
Source record: 68274

December Auction - Update 4

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). Without paper separator (wire rack). Supports near letter quality print. Handles friction feed or fan-fold paper. Very nice condition. Works well with Atari 850 Interface. Actual shipping added. -$19.95

semslie

A2. Atari 850 to Centronics Printer Cable. Works with above and other dot matrix printers. -$8.95 semslie

A3. Atari Dealer Demo Cartridge. 16K Dealer Demo in Centipede Case. Self-running. Shows advanced capabilities. Well executed programming tricks. Begins with multicolor Atari Logo with all colors displayed at once. Includes Household management, Recordkeeping (animated pencil), Home Entertainment (shows Star Raiders with different style tie-fighter), Investment Analysis, and Service Centers (draws U.S. map). Extremely rare. -$30 ebacher

A4. AtariWriter Cartridge. Includes 50 page spiral bound manual, Quick Reference Card, and Helpful Hints fold-out card. -$7.95 min

A5. Atari Assembler Editor Cartridge CXL4003. With 79 page User's Manual and Programmer's Reference Card. -$8.95 min

A5a. Koala Pad. Includes Koala Pad touch tablet, stylus, Micro Illustrator and Touch Tablet Owners Manual. Very Rare. No Disks. -$8.95 min

Atari 8-Bit Computer/XE Game System Cartridges
A6. Miner 2049er (computer style) -$2.50 grabben
A7. Robotron: 2084 (computer style) -$2.50 steg
A8. Final Legacy (computer style) -$2.50 min
A9. Joust (computer style) -$2.50 disk doctor
A10. Missile Command (computer style) -$2.50 min
A11. Super Breakout (computer style) -$2.50 min
A12. Barnyard Blaster (XE game system style - supports light gun *see Item A41 below) -$2.50 min
A13. Flight Simulator II (XE game system style) -$2.50 steg
A14. Millipede (computer style) -$2.50 disk doctor
A14a. Kindercomp cartridge. -$2.50 min
A14b. Centipede cartridge -$2.50 min

Atari 8-Bit Computer/XE Game System Cartridges
(New in boxes with instructions - not sealed)
A15. Star Raiders II -$5.95 min
A16. Battlezone -$5.95 min
A17. Ballblazer -$5.95 min
A18. Rescue on Fractalus! -$5.95 steg
A19. Desert Falcon -$5.95 min
A20. Thunderfox -$5.95 min

Atari 8-Bit Computer - Disks
A21. Pogo Joe (flip side for C64) disk -$1 min
A22. HomePak (flip side for C64), Batteries Included disk -$1 min
A23. Ken Uston's Professional Blackjack (flip side for C-64) with Operating Instructions manual. -$1.25 min
A24. Party Quiz Question Disk (General Edition 1), Suncom. Flip side for C-64. -$1 min
A25. F-15 Strike Eagle, Micropose disk -$1 min
A26. Blade of Blackpoole, Sirius disk -$1 min

A27. Twerps, Sirius disk -$1 min
A28. Spy vs. Spy and Spy vs. Spy II (Island Caper). Disk with Instructions. -$2.95 min
A29. Boulder Dash, First Star disk -$1.95 min
A30. Gruds in Space, Sirius disk -$1 min
A31. Repton, Sirius disk -$1 min
A32. Ali Baba and the Forty Thieves -$2 Joseph Red
A33. Murder on the Zinderneuf, Electronic Arts. Complete in package with disk and instructions/reference card. -$2.95 min
A34. Nudmehi Replica 1+1 Backup and Utilities Program. Designed to back up all Atari software prior to 8/15/82. Includes Sector Disassembler, Sector Search, Disk Bitmap, RPM Speed Adjustment. Support for optional data disks (not included). Disk and Instructions. -$2.50 Joseph Red
A35. CASDIS. Machine language program that converts Atari cassette-based programs to disk. Supports BASIC, machine language, and multi-load programs. With 28 page instruction manual. -$1.25 semslie
A36. Print Shop Graphics Library 3 with Reference Card. -$1.25 min
A37. Atari Word Processor Program Master Diskette -$1.95 min
A38. APX Insomnia Sound Editor with instructions -$1.95 min
A39. Ultima II Disk 2 Player Disk -$.25 min
A40. S.A.M. Software Automatic Mouth Disk, Don't Ask Computer Software -$1 min
A40a. Track Attack disk, Broderbund -$1 min
A40b. Hacker disk, Activision -$1 min
A40c. Drol disk, Broderbund -$1 min
A40d. Spy Hunter disk, Sega -$1 min
A40e. Master of the Lamps disk, Activision -$1 min
A40f The Great American Cross Country Road Race, Activision -$1 min
A40g. Maxi Golf, Activision 2 disk set -$1.50 min
A40h. Mr Do! Disk. Atari Computers one side/Commodore 64 flip side. -$1 min

Atari Controllers
A41. Light Gun. Works with XE system and 8-bit computers. Use with Barnyard Blaster (above). -$4.95 steg
A42. Track and Field Controller (Blue with 3 buttons - 2 Run and 1 Jump/Throw). Works with 2600 and 8-bit Track and Field games. Very rare. -$12.95 disk doctor
A43. Standard Atari Paddle Controllers (pair) -$2.95 min
A44. Atari Standard Joystick (single) -$3 Joseph Red
A45. Atari Standard Joystick (single) -$1.95 ebacher
A46 Epyx 500XJ Joystick with Autofire -$3.95 disk doctor
A47. TAC-2 Joystick -$4 vinceb33

Miscellaneous
A48. Flip and File - Clear smoke colored plastic. Holds 10 8-bit or XE cartridges (elephant disk sticker on front). -$1.95 disk doctor
A49. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A50. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A51. BCs Quest for Tires Poster. Approximately 17x23.5 inches. $.50 min
A52. Millipede (8-bit) box (crushed). $.25 min
A53. Atari Enamel Olympic Pin (see picture in Summer 84 Atari Connection)

-$2.95 grabben
A53a. Super Nintendo Mortal Kombat II Instructions -$.25 min
A53b. Colecovision French labels for Front Line. Excellent, like-new condition. -$.25 min

Books/Instructions
A54. Inside Atari BASIC. BASIC programming book. Key concepts (full of type-in examples). Fundamentals of Atari Graphics. GTIA Graphics, Game Controllers. 183 pages. -$2.95 semslie
A55. Atari 410 Program Recorder Owners Guide (full color) -$.50 steg
A56. Energy Czar Computer Program Instructions (20 pages) -$.50 min
A57. Disk Operating System II Reference Manual. 100 page DOS 2 reference manual. -$1.50 min
A58. APX Ultimate Renumber Utility Instructions -$.50 min
A59. Atari Haunted House (Creative Computing) Instructions -$.50 steg
A59a. APX (Atari Program Exchange) Keyboard Organ Instructions -$.50
A59b. APX (Atari Program Exchange) Sketchpad Instructions -$.50
A59c. APX (Atari Program Exchange) Video Math Flashcards Instructions -$.50
A59d. APX (Atari Program Exchange) Presidents of the United States Instructions -$.50

A60. Master Memory Map by Santa Cruz Software. 100s Important Memory Locations. Hints on Their Use. 14 pages of reference material. -$3.95 min

A61. Master Memory Map by Educational Software by Educational Software. 30 pages. How to PEEK and POKE., IOCBs, System Timers, Color Locations, Player Missile Graphics Registers, Bugs in Atari BASIC, Bugs in the O.S. Much more! -$4.95 min

A62. ANALOG Computing Pocket Reference Card. BASIC Instructions, XIO Command Codes, Sound Command Pitch Values, Player/Missile Area Layout. 6502 Assembler Mnemonics, Error Messages, Code Translation Table, More. -$3.95 min

A63. Atari BASIC Reference Manual in excellent condition. 100 pages, 3-hole punched. Originally shipped with Atari BASIC cartridge. -$8.95 min
A64. Atari 800 Home Computer Owners Guide. CO60057. Rev. 1 (full color). -$1.95 semslie
A65. Atari 810 Disk Drive Owner's Guide. CO60056. Rev. 1 (full color). -$1.95 min
A66. Atari 810 Introduction To the Disk Operating System Guide. CO60054 Rev. 1 (full color). -$1.95 min

Atari 2600 Manuals
0. Asteroids, Atari (b&w, 5 languages) -$.75 min
1. Human Cannonball, Atari (small black) -$.75 min
2. Hunt & Score, Atari (small black) -$.75 min
3. Ice Hockey, Activision (colored) -$.75 min
4. Indy 500, Atari (small black) -$.75 min
5. Joust, Atari (colored) -$.75 min
6. Jungle Hunt, Atari (colored) -$.75 min
7. Kaboom!, Activision (colored) -$.75 min

re: 28.8 on an Atari8...

The MIO and Ice-T are going at 19.2KBPS. The modem to modem
connection is 28.8KBPS. From the modem to the computer,
hardware flow control takes over and stops the modem when
the buffer is full. The thouroughput might only be a few
percent faster, but at any rate, there has not been a problem
with it yet...

re: RGB output...

I didn't mean anything as fancy as 80 column output, just merely
the ability to output in RGB, versus composite.

3864. Re: The PC Emulators

Newsgroup: comp.sys.atari.8bit
Date: 1997-11-30 00:00:00 UTC
From: he110@cleveland.Freenet.Edu
Message-ID: <65s58v$7dn@alexander.INS.CWRU.Edu>
Source record: 68277

re: why no good 8-bit emulators...

The simple reason is that the 8-bit Atari is much more complex
a machine to emulate than the simple kernel-based machines
such as a c64 or an Apple][, neither of which have anything
like display lists, for example. The C64 has a bizarre scheme
called "color memory", in my opinion a trick, to allow 16
colors in a 320x200 resolution. The catch is, however, that
only 4 colors can be in one 8x8 section of the screen, and
when you draw two lines of different colors in the wrong
place, the point of crossing will 'block up' with another
color...

re: Black Box and SDX 4.22...

Call Bob Puff at OSS at (716) 429-5639 for a current price for
the Black Box. Very superior to the MIO IMHO.

SDX 4.22- I got a 4.21 chip upgrade from FTE a few years ago,
before he fell off the face of the earth. Problem- The chip
doesn't work properly with the rest of the cart board. He still
owes me a cart board upgrade, paid $12 for it, where are you
Mike Hohman?

re: where would you get a monitor for RGB output...

I have a monitor capable of handling it, hooked to my 130XE right
now. If anyones needs a decent monitor capable of RGB, look for
an Amiga 1080 monitor (or compatible). Pretty decent RGB output.
Nore that I'm NOT talking about BNC RGB output, but analog/TTL
RGB output...

I have had trouble with following this newgroup too. I think the problem is related to the capacity of the news server of your provider. Providers always blame the Internet or some external factor, while in fact it is probably due to their limited bandwidth. If their connection to the Internet does not have sufficient bandwidth, they will have to limit priority of news traffic. However the Internet will not stop creating more and more posts, so eventually you will lose a couple of messages. I do not know by what mechanism the various servers send the messages to each other, but I know that my friends who use a different provider sometimes see messages that simply do not appear on the server at my provider. The only thing you can do is switch provider. My provider appearantly did do something about the problem, since they installed new servers and new network stuff, and it looks like I receive about twice as much messages as before. If you want to check whether you missed some

messages (which is extremely annoying if they were addressed to you)
then take a look at Deja News, you can see if messages appear there
while they do not appear at your provider's news server. Go to
http://www.dejanews.com/home_sf.shtml
and enter comp.sys.atari.8bit in the Group(s) box.
Remember though that some servers get the news much later than others.
Do not ask me why this is, because all this news server stuff is a
mystery to me too. Even to the people at the help desk of the
various providers.

3870. WOW!!!!

Someone was talking about how Split Luma/Chroma does not
produce artifacting. I was outputting Split L/C with my 130XE
and Magnavox 1CM135 monitor, and I was getting artifacting!
This got me to thinking- and I wondered if I had all the pins
right on my monitor cable. So I shut the system down, took
the cable apart, looked at the pinout in the 130XE manual, and
Lo and behold!!! I had one pin reversed left to right.
I was outputting Composite video instead of Composite Chroma!!!
In effect, I was simply getting too much color signal to the
monitor. I fixed the problem, and _WOW_! There is ZERO
artifacting AT ALL! Ice-T is a beautiful joy to work with now!
I can be in graphics 8, turn up the color saturation all the
way, and the mode is still completely artifact-free.

Now all I have to do is find a way to sharpen the monitor's
output itself... not too bad now, but it could always be better!
I've been running a bunch of demos since I fixed it...

Yeah, I wonder why the Commies brag about the superiority of
the C64 when we have SIXTEEN TIMES the color choices, and one
extra sound voice (or 8 in total if you want to do the Gumby
upgrade- of course then we also have four 16-bit channels using
channel-pairing with Gumby...), not even counting the 'keyboard'
voice. But then we can also add the C64 SID chip to get their
sound capability as well... (SysInfo checks for the presence of
a SID chip!)

3873. FS/T: Atari 8-bit computer items [12/01/97] {Christmas season special}

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-01 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <34877b41.1187039@nntp.ix.netcom.com>
Source record: 68157

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 12/01/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 5.00 Home Filing Manager, The (Atari)
$ 5.00 Print Shop, The (Br0derbund) {3}
$ 5.00 SynFile+ (synapse) {2} -- also includes Reference Card
$ 5.00 Timewise (Atari) {1}
$ 5.00 Touchdown Football (Electronic Arts) {2}
$ 5.00 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Loose cartridges, no box or manual:
$ 7.00 Alphabet Zoo [Spinnaker] -- no label
$ 4.00 Atariwriter
$ 8.00 Ballblazer -- XE cartridge
$ 5.00 Centipede
$11.00 David's Midnight Magic [Br0derbund]
$ 7.00 Delta Drawing [Spinnaker]
$ 7.00 Dig Dug
$ 5.00 Donkey Kong
$ 7.00 Frogger [Parker Brothers]
$11.00 Gateway to Apshai [Epyx]
$ 2.00 Missile Command
$ 5.00 Pac-Man
$ 7.00 Qix
$ 2.00 Space Invaders
$ 4.00 Star Raiders
$ 5.00 Super Breakout

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will
not boot up. Sold as non-working item, possibly repairable, for
parts only!

$ 7.00

*****

LOT #2

ATARI 1010 PROGRAM RECORDER, with power supply, and manual.

This item has not been tested.

I have plugged in this recorder, and it did power up. The
rewind and fast forward (advance) functions work. It must be
hooked to a computer to test the play and record functions.

$ 9.00

*****

LOT #3

ATARI 820 PRINTER, with two (2) rolls of paper and built-in
power cord.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$ 8.00

*****

LOT #4

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$20.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print" Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for 400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 8.00

*****

LOT #6

EPSON RX-80 PRINTER with built-in power cord.

$14.00

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.00 for the first disk-based software item and $1.25 for each additional disk-based software item, unless otherwise listed. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price

items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

There is an Atari 8-bit database and search engine at
http://closertohome.dyn.ml.org/search.html . You can input "mio", click on
the search button, and it will search through all of the text files for that
word on that site. It currently uses a perl script to do this, but I'm
going to create a faster cgi using vb5 to replace it. I don't think that I
have any captured chat sessions or message forums from CIS, though. If you
have files like that, why not send them and I'll add them to the database.

The RGB adapter we did only puts out 80 column RGB, it does NOT change the
normal graphics output of the computer into RGB....

> things could be done if ANTIC had all the time it wanted...

Fortunately it can't be done.
The problem would be that once you've got the CPU to switch itself off, you've not got any way of switching it back on again, so you're left staring at a still screen. Plus VBI's and DLI's use the CPU too, so they would be out. In effect you would just have a standard graphics (or text) screen to look at with nothing else happening. Don't forget that it's the CPU that does all the grunt work, ANTIC just sits there producing the screen output, and as such wouldn't benefit from having any extra time (unlike the CPU). Still it's a novel idea.

Bill,

Does the Magnivox 1CM135 have audio as well?

Thanks,

Austin Franklin

3883. Want to buy

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-01 00:00:00 UTC
From: Chris Shilliday <cyber@bright.net>
Message-ID: <3482E3DF.1FE0E762@bright.net>
Source record: 68167

I am looking to buy a plain old Atari 800. Must have all cords (video and power). Also interested in monitor, floppy drive and\or cassette recorder for same. Prefer to buy from someone in Northeast Ohio Area, preferably close to Akron, so that I can pick up equipment in person. I will pay cash or trade for PC equipment. Please E-Mail me with your equipment, prices, location, etc..

Chris Shilliday

The kids (now grown up) came home for Thanksgiving, and we got
out Miner 2049er, which we hadn't played for years. There's a
code---something involving typing the phone number displayed
on the start screen?---by which you can make the game go to
any selected level. But we've all forgotten it, and can't
find the paper on which it is written down. Can anyone help?

Thanks,

John Doner

If you sit through the demo (title) screen, the company's info does appear, phone number and all. If I recall (haven't played it in a few years myself, ever since my 1050 finally died in '95!) you start the game, type the phone number and then hit the shift+level number you wanted to go. It was a good way to get "infinite" lives, so to speak. That is, if you got killed, you could jump or re-do the level w/o losing the guy.

From what I have read in this newsgroup he ran off with
some peoples money and has not been heard from since. YMMV.

Hello out there,

we are looking for someone who has the game "Omnitrend's Universe" in original form.
We need a copy of the Disk "Flight one" and "Flight two", because we crashed both
disks during playing the game with writeprotection disabled. And NO BACKUP! :-(((

Please, if you have this game send us the flight disk as a diskimage
(DiskCommunicator, XFD-File or ATR File) to this email Address:

Carsten Strotmann
cstrotm@ibm.net

Thank you.

Ciao

3894. MIO 1MEG upgrade

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-01 00:00:00 UTC
From: cowpoke1@hotmail.com
Message-ID: <881010319.5398@dejanews.com>
Source record: 68178

Hey all,

I've located the MIO 1meg upgrade document, and I want to attempt to do this modification. The document calls for and ICD 1MEG-MIO ROM. Does anybody out there have this rom image? Does it exist in cyberspace? I want to get ahold of this, since without it, this upgrade is not possible!

On a side note, has anyone ever build the ANTIC Eprog (EPROM Programmer/ Reader?). I built it years ago, and just now pulled it out of the closet to get it working. It doesn't read data from a ROM consistently. My next try at getting this thing to work is to erase the EPROM and read it again. Anyone have success with this?

If I get this programmer working, I plan on building a programmer that attaches to the PBI/ECI (but to do that, I need a programmed ROM first!). So, which came first, EPROM or the EPROM Programmer? The Egg?

help!

cowpoke.

I do it everyday.......I use;

130xe, 14400 modem, 256k mio, Ice-T v2.72. A service
provider with shell accounts is also helpful. But bare bones,
use telnet from genie....Cis....or the ilk and telnet to one
of the following;

trfn.clpgh.org..........follow the prompts
or;

sailor.lib.md.us..........follow the prompts

Despite all that has been said around here, flow control works
fine with the mio. It's a matter of matching who you call. When
I used genie, everything worked fine. Found an ISP with a shell
account who used US robotics modems and had boocoo headaches
till I tried a couple different modems. Also get Len Spencers
hyper-speed handler......you can get along without it, but
Ice-t really flies with it.

Paul Clark

Itay, if you read this, I haven't forgot about the shareware
fee........

Source record: 68180

It just hasn't been my day. Due to an incredibly stupid mistake I managed to reformat my Ice-T work disk. When I went to my backup I discovered it had been damaged and is unreadable. I suppose these things happen to everybody from time to time, but I really hate it when they happen to *me*.

So, it's back to square one. I downloaded Ice-T from Genie, but I'm no longer there, and Delphi's library doesn't have it. I'll have to FTP it from someplace. I've never done this before, my Internet activity heretofore contained to email and a couple of newsgroups. I thought I needed a VT100 program to FTP, but upon doing some reading it seems that I don't - on Delphi, at least. It looks easy enough, but I need an address to get me started.

Can anybody give me a specific FTP address where I can find Ice-T 2.72? Also, anything I ought to know about FTP-ing before I try it for the first time?

>Atari DOS disk like Atari DOS 2.0s, or MyDOS 4.5 or SpartaDOS, any Atari
>DOS so you get the basic disk control commands loaded so you can access
>the contents of your disks.
>Curt

I do this and get the Atari Memo Pad. =(I tried putting the disk in
with the label facing left, then facing right. I tried putting the SIO
cable into both of the ports on the back of the drive. And yes, I turn
the drive on before the Atari, and the SIO cable does indeed connect the
two. I tried both of my DOS disks.

Actually, I've never even used DOS on my atari before. All of my disks
are either bootable or BASIC programs, in which case I use them in
conjunction with the BASIC cart.

I haven't gotten any disk to boot. Am I missing something that should be
completely obvious or does it look like I have a bad drive or cable?

re: does the Magnavox 1CM135 have audio...

Yes, it has stereo inputs. There are speakers on both sides.
This has got to be the most ideal monitor for the 8-bit Atari
that I've ever seen. I would however like to see its big brother,
the 8CM515, supposedly a 15" version.
The 1Cm135 also has a "green" mode where it shuts off the red
and blue guns and gives you a green screen. Nice for WP.
I really don't know where one would find one like this, as I
got it used at a hamfest for $50. It sat all by itself,
ignored by the PC crowd, and so I asked if I could plug it in and
try it. Unfortunately, the only available computer that could
be used was a c64 <shudder>. It worked OK and I got it. It
also came with a removable swivel base, but I took it off to
fit in the desk.

The manual lists a toll-free number for Magnavox:

1-800-255-5122

Or write:

3902. Atari 8-bit disks for sale/trade

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-02 00:00:00 UTC
From: Mark Androvich <mandrovi@mail2.quiknet.com>
Message-ID: <01bcfeed$d439e700$c6f0b7cf@rjiredff>
Source record: 68186

Hello.

I came across a bunch of Atari 8-bit computer disks while unpacking some old boxes. They include: Movie Maker, Karateka, Tail of Beta Lyrae, Summer Games, Temple of Apshai Trilogy, Leader Board Dual Pack, Gauntlet, a Wayout demo, an Infocom Sampler, and a bunch of Infocom games (Hitchhiker's Guide, Planetfall, Stationfall, Suspect, Infidel, and Enchanter.

I've also got Deadline in its original packaging (a dossier file), not the striped boxes of later releases. Finally, I've got Asteroids, Pac-Man, and Music Composer in cartridge form.

I'd like to give them to a good home. Well, not exactly give, but sell very cheaply. Or trade for a couple of cartridges I don't have (Atari computer, 2600, 7800, etc.).

If interested, please e-mail me. I'll accept any reasonable offer.

Thanks,

Mark Androvich

3903. Reinhard's Rarities Auction 12-01-97

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-02 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <660cm1$h8e$1@mark.ucdavis.edu>
Source record: 68187
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

www.pribish.com/auction.txt

Thanks, Reinhard

* *
Note: I saved the triangular cartridge #1 and the light gun
from the Coleco Telstar arcade before tossing all my broken stuff.
Both untested, but in great shape...
